Notes

The information contained in this manual has been thoroughly researched and prepared. Nevertheless, we cannot assume liability for omissions or errors of any nature whatsoever. We would, however, be grateful for your comments or suggestions.

We shall not accept any claims for damages, except for those resulting from intent or gross negligence.

As this product is available in several designs, there might be deviations between the descriptions and instructions in hand and the product supplied.

We reserve the right to make technical changes, which serve to improve the product, without prior notification. Thus, it cannot be assumed that subsequent versions of a product will have the same features as those described here.

Registered trademarks are the property of their manufacturers.

FS 12-100-1 M G8-B8-PB and FS 12-100-2 M G8-B8-PB - Manual V1.1

Revision history

Manual version	Date	Changes
1.0	14.04.2015	First release
1.1	11.06.2015	Converting the numerical format has changed

The instruments are not to be used for safety applications, in particular applications in which safety of persons depends on proper operation of the instruments.
These instruments shall exclusively be used by qualified personnel.
Repair only by di-soric.

2 (OUT6)	Push-Pull LOW: 0 V; HIGHT: +U _B - 1 V; max. 100 mA
3 (OUT7)	Push-Pull LOW: 0 V; HIGHT: +U _B - 1 V; max. 100 mA
4 (OUT8)	Push-Pull LOW: 0 V; HIGHT: +U _B - 1 V; max. 100 mA
5 (OUT9)	Push-Pull LOW: 0 V; HIGHT: +U _B - 1 V; max. 100 mA
6 (OUT10)	Push-Pull LOW: 0 V; HIGHT: +U _B - 1 V; max. 100 mA
7 (OUT11)	Push-Pull LOW: 0 V; HIGHT: +U _B - 1 V; max. 100 mA
8 (OUT12)	Push-Pull LOW: 0 V; HIGHT: +U _B - 1 V; max. 100 mA

Table 7 : RS-232

Pin	Description	Specification
1 (GND)	GND	0 V
2 (TXD)	Send	-5 V ... +5 V
3 (RXD)	Receive	-5 V ... +5 V
4 (+U _B)	Optional voltage output	18 ... 28 VDC
Shield	Device shield (earth)	Earth

Table 8 : RS-232 Parameters

Parameter	Value
Baud rate	9.600 ... 115.200
Data bits	8
Parity	no
Stop bits	1
Flow control	No

The baud rate of the RS-232 interface is pre-set to 28800.

Table 9 : USB

Pin	Description	Specification
1 (GND)	GND (black)	0 V
2 (VBUS)	VBUS (red)	+5 V
3 (D-)	D- (white)	-400 mV
4 (D+)	D+ (green)	+400 mV
Shield	Device shield (earth)	Earth

Make sure that the respective shield wires of the used sensor cables are properly connected to earth!

3 PROFIBUS DP

3.1 General

Color sensors that are equipped with the optional Profibus interface, can be easily integrated into existing bus systems. They work as Profibus standard slave and support baud rates up to 12 MBaud (autodetect).

The Profibus address of the device is set via the bus master (e.g. Siemens PG or any master with SET_SLAVE_ADD). The default factory set address is 1.

The user can choose the data, which is transferred to the Profibus master, via different modes. The possibilities range from status-information and the current state of the switching outputs to the transfer of all color values, including the color detection result and the color distance.

3.2 Connections

The sensor is connected to the bus via two standard circular connectors (Binder series 715, 4 pin, B coded). If only one of the two is connected (PB-IN), the other is to be provided with a terminating resistor.

The pin assignment of the connectors is shown in Table 10.

Table 10 : Pin assignment of the Profibus connectors

Description	PB-IN	PB-Out
Scheme		
+ UB	n.c.	1
Line A	2	2
GND	n.c.	3
Line B	4	4

3.3 Data transfer

The di-soric FS 12-100-1 M G8-B8-PB and FS 12-100-2 M G8-B8-PB color sensors with Profibus interface have to be configured as standard Profibus slave. By the first parameter setting after power on, the sensor recognize the chosen mode by the Profibus input bytes. The data format of the different modes is explained in the following section.

The data length of the several modes is shown in Table 11.

Table 11 : Data length

Mode	Length of input data (Profibus-IN)	Length of control data(Profibus-Out)
1	4 Byte	2 Byte
2	16 Byte	2 Byte
3	28 Byte	2 Byte

3.4 Profibus-IN

For the format of the input data there are three different modes available. The data is sent to the Profibus-master.

Mode 1

In mode 1 the color sensor sends a life-counter, status information and the current state of the switching outputs of the sensor to the bus.

Life-counter (byte 1)

- Counts cyclic from 0 to 255 (1 byte)
- Is incremented with every measured value of the sensor
- Ensures the validity of the measured value
- Important if the sampling rate of the sensor is faster than the bus cyclic time

Status (byte 2)

- Shows information about the state of the sensor
- Is updated with each bus request
- Trigger-Ack confirms the correct reception of a rising edge of one of the two trigger bits from the Profibus in bytes

Table 12 shows the meaning of the bits in the status byte.

Table 12 : Meaning of the bits in the status byte

Bit	Name	Function
0	Trigger-Ack	Toggle Bit for Trigger-Mode
1	Stab-Error	1 = Stabilization channel under- respectively over steered
2	Math-Error	1 = mathematical over steering of the transformation function
3	Software-Acc	1 = Access of the parameter setting software FS-Tool on the sensor
4	Reserved	Not used
5	Reserved	Not used
6	Reserved	Not used
7	Reserved	Not used

Switching outputs (byte 3 and 4)

- Show the latest state of the 12 color sensor switching outputs
- Byte 3: 0 ... 3: switching outputs 9 to 12
- Byte 4: 0 ... 7: switching outputs 1 to 8

Mode 2

In mode 2 the sensor outputs all data of mode 1 and all relevant color and recognition data of the sensors first measuring channel. These include the three color values (e.g. a^* , b^* , L^* or X, Y, Z) and the result of the recognition including the two color distances.

The individual values are 16 byte long and the higher byte is transferred first.

Mode 3

Mode 3 outputs the data of mode 1, mode 2 and the color and recognition data of the sensors second measuring channel. This mode is only useful for the FS 12-100-2 M G8-B8-PB sensor. Only in this case the measuring channels are evaluated separately.

Overview of all modes

Table 13 : Profibus-IN data

Byte	Mode	Data
1	1+2+3	Life-Counter
2	1+2+3	State
3	1+2+3	Switch outputs 9 ... 12
4	1+2+3	Switch outputs 1 ... 8
5	2+3	Color value 1 channel 1 High
6	2+3	Color value 1 channel 1 Low
7	2+3	Color value 2 channel 1 High
8	2+3	Color value 2 channel 1 Low
9	2+3	Color value 3 channel 1 High
10	2+3	Color value 3 channel 1 Low
11	2+3	Color index channel 1 High
12	2+3	Color index channel 1 Low
13	2+3	Color distance Channel 1 High
14	2+3	Color distance Channel 1 Low
15	2+3	Lightness distance Channel 1 High ¹
16	2+3	Lightness distance Channel 1 Low ¹
17	3	Color value 1 Channel 2 High
18	3	Color value 1 Channel 2 Low
19	3	Color value 2 Channel 2 High
20	3	Color value 2 Channel 2 Low
21	3	Color value 3 Channel 2 High
22	3	Color value 3 Channel 2 Low
23	3	Color index Channel 2 High
24	3	Color index Channel 2 Low
25	3	Color distance Channel 2 High
26	3	Color distance Channel 2 Low
27	3	Lightness distance Channel 2 High ¹
28	3	Lightness distance Channel 2 Low ¹

Converting the numerical format

The color values and the recognition result in mode 2 and mode 3 are transmitted in 16Bit-signed-integer format. To present color values in a correct way they have to be divided by 100. The range of value in the sensor is between +32768 and -32667 and has consequently to be converted in a range of +327.68 and -326.67.

Due to the internal data processing, the value of the color distance is squared. For further processing it has to be calculated with the square root function. In case of usage of the cylinder mode also lightness distance parameter will be transmitted. This value has to be divided by 100, like color values.

¹ If spherical tolerance is chosen, the lightness distance is set to the maximum(0xFFFF)

3.5 Profibus-OUT

Within all modes, two data bytes are transferred to the sensor with every bus-cycle. The first byte specifies the table index for the controlled teach-in of a color. The individual bits of the second byte are used to control the sensor. Table 14 provides an overview of the functions.

Table 14 : Meaning of the control bits in the second Profibus-Out-Byte

Bit	Name	Function
0	TRG 0	Control line to update the outputs
1	TRG 1	Control line for Teach-In
2	Teach	Teach-In Mode 0 = as adjusted in the DSP 1 = TabIndex
3		Reserved
4		Reserved
5		Reserved
6		Reserved
7		Reserved
8-15	TabIndex	Table index for Teach-In (if bit 2 = '1')

The Teach-Bit determines how the teach in takes place.

Teach = low triggered teach-in, as adjusted in the sensor
Teach = high the new reference color is stored in the table space, as indicated in byte 2

The reserved control bits are not evaluated. They should be kept to 'low'.

3.6 Diagnostics and Error-Handling

The connection to the Profibus is realized by an integrated communication module, which cyclical request the data from the main processor of the color sensor.

If an error occurs during the data transmission between the processors, it will be detected and a diagnostic message is sent to the Profibus master.

The two diagnosis bytes then have the following value.

Byte 1: 0x02_h = 00000010_b

Byte 2: 0x01_h = 00000001_b

Once the communication between the processors of the sensor is working correctly again, the diagnostic message is deleted.

5 Displays

Table 15 : LED meaning

LED	Meaning
O1-O12	State output 1-12
Stab.	Error Stabilization
2-Ch.	Two channel operation
Teach	Teach-in mode active
Signal	Signal mode active
Sel.	Sensing channel 2 active
SET	Tolerance
Stat., Link, Error	Interface specific

Table 16 : Assignment of flash impulses to tolerance values

Flash impulses	Tolerance	Tolerance value
1	Very small	3
2	Small	6
3	Medium	9
4	Large	15
5	Very large	20

If the sensor signal is clipping the LEDs are flashing alternately.

6 Button operation

Automatic signal adjustment

- Position sensor to object
- Press "Mode" button shortly until "Sig." mode is active
- Press "SET" button for at least 2 seconds
- To store parameters press "Mode" button for at least 2 seconds

Sample stabilization reference value

- Press "Mode" button shortly until "Sig." mode active
- Press "Sel." Button shortly to select stabilization channel
- Adjust signal level for stabilization channel mechanically (adjusting screw)
- Press "SET" button for at least 2 seconds
- To store parameters press "Mode" button for at least 2 seconds

Teaching in colors

- Position sensor to object
- Press "Mode" button shortly until "Teach-In" mode active
- Press "Sel." button to select table entry
- Press "SET" button for at least 2 seconds
- To store parameters press "Mode" button for at least 2 seconds

Adjust tolerance

- Press "Mode" button shortly until "Teach-In" mode active
- Press "SET" button shortly to select tolerance
- Press "SET" button for at least 2 seconds
- To store parameters press "Mode" button for at least 2 seconds

Clear color table

- Press "Mode" button shortly until "Teach-In" mode active
- Press "Sel." button for at least 2 seconds
- To store parameters press "Mode" button for at least 2 seconds

7 Surge protection

To use the sensor in systems where the supply voltage line > 3 meters, it is recommended to use a filter module to protect against surges. A suitable 24 V DC filter module (surge) is available from the company WAGO under order number 750-626.

8 Declaration of Conformity

Manufacturer	ASTECH Angewandte Sensortechnik GmbH
Address	18057 Rostock Schonenfahrerstr. 5 Deutschland
Product name	FS 12-100-2 M G8-B8-PB/ FS 12-100-1 M G8-B8-PB
Device description	Color sensor

EG Declaration of Conformity

In accordance with the Directive of Electromagnetic compatibility 2004/108/EG

Conforming to the following standards

Radio disturbance characteristics: EN 61000-6-3:2007

EMC immunity EN 61000-6-2:2005

In addition the following standard is passed:

EN 61326-1:2006; Electrical equipment for measurement, control and laboratory use –
EMC requirements;
Classification: Class B (emission);
Industrial equipment (immunity)

Place Rostock

Date Januar 2010
