 - Safety Integrity Level (SIL 3) to IEC/EN 61508
- Safety radio transmission
- Radio receiver for:
 - Radio controlled enabling switch
 - Control signals for 6 non-safety semiconductor outputs
- Multifunction safety modul with additional control input to connect:
 - E-stop pushbutton (2-channel), safety gate or LC type 4 according to EN 61496
 - 1 Start button
 - 1 or 2 monitoring contacts to signal the use of radio
- Adjustable functions with step switch for:
 - Manual start or automatic start
 - when removing the enabling switch from the charger (open control contact) manual start is possible by enabling switch
 - possibility of disabling the access protection (gate) with active enabling switch
- Broken wire and short circuit monitoring with error indication
- Feedback circuit Y1/Y2 for monitoring of external contactors
- 2 semiconductor outputs for status indication
- LEDs for status indication
- Easy connection
- DIN rail mounting
- Removable terminal blocks allow fast exchange of module
- Also as input modul for multifunction, modular safety system SAFEMASTER M available
- Compact unit, only 67.5 mm width

Indication for Enabling Switch

The BI 6910 is equipped with a safety radio receiver to operate the signals from a enabling switch. It has 1 or 2 inputs depending on the operation mode (S31-S32 and S33-S34) to connect the indication contacts of a battery charger for the remote control.

Aerial Connection

The radio connection of the radio controlled safety module to the re-enabling switch is made via an aerial that is mounted directly on the front of the BI 6910. If the unit is built into a metal cabinet the aerial has to be mounted outside. The connection is made via DOLD coax cable. Special functions like activity monitoring and selection of radio frequency can be adjusted on the enabling switch.

Indications

green LEDs K1 and K2:	on when safety relay activated
green LED reception:	on at radio receive
yellow LEDs run 1, run 2 and outputs 48 and 58:	indicate the actual status of the module
red LED receiver error:	indicate errors on radio-receiver

Notes

A machine must only be started from a location from which one can see that no person is present in the dangerous area.

To solve this there are 2 variants of the BI 5910:

BI 6910.../00MF9

This unit is used in applications where start is only possible from a hard-wired start button.

BI 6910.../01MF9

This unit has in addition to the radio control also an infrared function. The reset of the enabling switch is only accepted if the reset signal is received via radio and via infrared. This means that the enabling switch must be pointed at the infrared receiver for reset.
