

Technical Information

Micropilot S FMR532

Level-Radar

Level transmitter for continuous and non-contact precision level measurement

For custody transfer and inventory control applications with NMI- and PTB-approvals.

Application

The Micropilot S is used for highly accurate level measurement in storage tanks and can be applied in custody transfer applications. It meets the relevant requirements according to OIML R85 and API 3.1B.

The FMR532 with planar antenna is suited exclusively for stilling well applications with measuring ranges up to 38 m (125 ft).

Your benefits

- 0.8 mm (0.03 in) precision (2σ value)
- National approvals (NMI, PTB) for custody transfer.
- Easy integration into tank gauging systems via the Tank Side Monitor NRF590.
- Easy on-site operation via menu-driven alphanumeric display.
- Easy commissioning, documentation and maintenance via FDT/DTM technology (FieldCare).
- Planar antenna versions allow direct installation on tapered stilling wells.
- Low-cost, easy installation via 4-wire cable with HART and 24 V DC (intrinsically safe).
- Gas-tight process connection (second line of defense) standard for any antenna version.
- Inventory Control version with reduced accuracy (3 mm [0.12 in]) available for all device versions.

Function and system design

Measuring principle

The Micropilot is a "downward-looking" measuring system, operating based on the time-of-flight method. It measures the distance from the reference point (process connection) to the product surface. Radar impulses are emitted by an antenna, reflected off the product surface and received again by the radar system.

- 1 GRH reference point of measurement (bottom edge of flange or threaded connection)
2 Level zero point (gauge reference plate)

- E Empty calibration (= zero point)
F Full calibration (= span)
D Distance measured
L Level ($L = E - D$)

Input

The reflected radar impulses are received by the antenna and transmitted into the electronics. A microprocessor evaluates the signal and identifies the level echo caused by the reflection of the radar impulse at the product surface. The unambiguous signal identification is accomplished by the PulseMaster® software, based on many years of experience with time-of-flight technology. The mm-accuracy of the Micropilot S could be achieved with the patented algorithms of the PulseMaster® software.

The distance "D" to the product surface is proportional to the time of flight "t" of the impulse:

$$D = c \cdot t / 2,$$

with "c" being the speed of light.

Based on the known empty distance "E", the level "L" is calculated:

$$L = E - D$$

Refer to the above figure for the reference point for "E". The stability of the reference point for the measurement (GRH) has a decisive influence on the accuracy of the measurement! The Micropilot is equipped with functions to suppress interference echoes. The user can activate these functions. They ensure that interference echoes (i.e. from edges and weld seams) are not interpreted as level echoes. They ensure that interference echoes (i.e. from edges and weld seams) are not interpreted as level echo.

Integration into the Asset Management System

The HART interface allows the integration into the AMS® (Asset Management System) from Fisher-Rosemount.

Custody transfer applications

The Micropilot S is suitable for custody transfer and inventory control applications. The on-site testing has to be done in compliance with the applicable regulatory standards. The Micropilot S can be sealed after successful on-site calibration to be protected against any access to the electronics compartment and any changes of software settings. If the Micropilot S is used for custody transfer or inventory control, any temperature influence on the tank shell height can be compensated for using the Tank Side Monitor (TSM). In addition, the vertical movement of the gauge reference point due to the hydrostatic tank deformation can be compensated in the Tank Side Monitor. A Tank Side Monitor can provide 24 V DC for a Micropilot S. The Tank Side Monitor can communicate with up to 6 devices via HART Multidrop.

Integrated in tank gauging system

The Endress+Hauser Tank Side Monitor NRF590 provides integrated communications for sites with multiple tanks, each with one or more sensors on the tank, such as radar, spot or average temperature, capacitive probe for water detection and/or pressure sensors. Multiple protocols out of the Tank Side Monitor guarantee connectivity to nearly any of the existing industry standard tank gauging protocols. Optional connectivity for 4-20 mA sensors, digital I/O and analog outputs facilitate full integration of all sensors at the tank. Use of the proven concept of the intrinsically safe HART bus (HART multidrop) for all on-tank sensors yields extremely low wiring costs, while at the same time providing maximum safety, reliability and data availability.

Input

Measured variable

The measured variable is the distance between a reference point GRH (mounting flange) and a reflective surface (e.g. product surface). The measured value and all parameters are displayed using either metrical SI-units or US/UK-units (inch, ft, ...).

The level is calculated based on the tank height entered.

To compensate for non-linear effects such as movement of the tank roof, a correction table (dip chart) can also be entered.

Measuring range

The usable measuring range depends on the size of the antenna, the reflectivity of the medium, the mounting location, and eventual interference reflections.

The following tables describe the groups of media as well as the achievable measuring range as a function of application and media group. If the dielectric constant of a medium is unknown, it is recommended to assume media group **B** to ensure a reliable measurement.

Media group	DC (ϵ_r)	Examples
A	1.4 to 1.9	Non-conducting liquids, e.g. liquefied gas (LPG). For more information, please contact your Endress+Hauser sales center.
B	1.9 to 4	Non-conducting liquids, e.g. gasoline, oil, toluene, white products, crude oil, bitumen, asphalt, ...
C	4...10	e.g. concentrated acids, organic solvents, esters, aniline, alcohol, acetone, ...
D	> 10	Conducting liquids, e.g. aqueous solutions, diluted acids and alkalies

Media group		Stilling well/ Bypass
		
		Measuring range
		FMR532 ≥ DN150
A	DC (ϵ_r) = 1.4 to 1.9	38 m (125 ft)
B	DC (ϵ_r) = 1.9 to 4	
C	DC (ϵ_r) = 4 to 10	
D	DC (ϵ_r) > 10	
Max. measuring range with custody transfer approval		NMi: 25 m (82 ft) PTB: 30 m (98 ft)

Blocking distance

The blocking distance (= BD) is the minimum distance from the reference point of the measurement (mounting flange) to the medium surface at maximum level.

- A Reference point of measurement
- B Maximum level

Blocking distance (BD) ¹⁾	Stilling well/ Bypass
from flange	1 m (3.3 ft) (→ 20)

1) 1 mm (0.04 in) accuracy under reference conditions

Inside the blocking distance, a reliable measurement can not be guaranteed.

Output

Output signal	<p>4-20 mA (invertible) with HART protocol (e.g. for multi drop connection to Tank Side Monitor NRF590): This version can be operated using the PC operating software FieldCare. The device supports both point-to-point and multidrop operation. For measurements with mm precision, the measured value must be transmitted using the HART protocol to ensure the necessary resolution.</p> <p>Order code in Product Configurator under "Output; Operation": Version A (4-line display VU331, envelope curve display on site)</p>
Signal on alarm	<p>Error information can be accessed via the following interfaces:</p> <ul style="list-style-type: none">■ Local display:<ul style="list-style-type: none">- Error symbol- Plain text display- LED's: red LED continuously on = alarm, red LED flashes = warning■ Current output■ Digital interface
Load	<p>Min. load for HART communication: 250 Ω</p>
Linearization	<p>The linearization function of the Micropilot S allows the conversion of the measured value into any unit of length or volume. Linearization tables for calculating the volume in cylindrical tanks are pre-programmed. Other tables of up to 32 value pairs can be entered manually or semi-automatically.</p>
Galvanic isolation	<p>500 V towards:</p> <ul style="list-style-type: none">■ power supply and ground■ power supply and signal

Power supply

Terminal assignment

4-20 mA with HART

The 4-wire cable is connected to the screw terminals (wire diameters 0.5 to 2.5 mm² [20 to 14 AWG]) in the terminal compartment. Use 4-wire twisted pair cable with screen for the connection. Protective circuitry against reverse polarity, RFI, and over-voltage peaks is built into the device (TI00241F/00/EN, "basics for EMC-tests").

Connection to Tank Side Monitor NRF590

The Micropilot S may be connected, together with other devices in a hazardous area, to a Tank Side Monitor. In this case, it is recommended that the shielding on the cables be grounded centrally at the Tank Side Monitor and that all devices be connected to the same potential matching line (PML). If, for functional reasons, a capacitive coupling is required between the local ground and the shield (multiple grounding), ceramic capacitors with a minimum dielectric strength of 1500 Veff must be used. The overall capacity of 10 nF must not be exceeded in this case. The FISCO model provides information on grounding intrinsically safe, interconnected devices.

If it is not possible to lay a grounding cable between the NRF590 and the Micropilot S, it is possible to ground on one side at the NRF590. In this case, it is essential that the cable shield on the Micropilot S be grounded using a ceramic capacitor with a maximum capacitance of 10 nF and a minimum isolation voltage of 1500 V.

- 6 PAL (potential matching line)

A0020823

Connection as a stand-alone device

The Micropilot S located in a hazardous area is connected as a stand-alone device to a power supply unit and transmitter located outside the hazardous area. In this case, it is recommended that the shielding directly on the Micropilot be connected to the housing ground; the Micropilot S and the supply unit are connected to the same potential matching line (PML).

Ripple HART

47 to 125 Hz: $U_{ss} = 200 \text{ mV}$ (at 500Ω)

Max. noise HART

500 Hz to 10 kHz: $U_{eff} = 2.2 \text{ mV}$ (at 500Ω)

Overvoltage protector

- The level transmitter Micropilot S is equipped with an internal overvoltage protector (600 Vrms surge arrester) according to EN/IEC 60079-14 or EN/IEC 60060-1 (impulse current test 8/20 s, $\hat{I} = 10 \text{ kA}$, 10 pulses). Additionally, the device is protected by a galvanic insulation of 500 Vrms between the power supply and the (HART) current output. Connect the metallic housing of the Micropilot S to the tank wall or screen directly with an electrically conductive lead to ensure reliable potential matching.
- Installation with additional overvoltage protection HAW560Z/HAW562Z (see XA00081F, "Safety instructions for electrical apparatus certified for use in explosion-hazardous areas").
 - Connect the external overvoltage protector and the Micropilot S transmitter to the local potential matching system.
 - Potentials shall be equalised both inside and outside the explosion hazardous area.
 - The cable connecting the overvoltage protection and the Micropilot S level transmitter must not exceed 1 m (3.3 ft) in length; the cable must be protected e.g. routed through a metal tube.

Power supply

- For stand alone operation recommended via two Endress+Hauser RN221N.
- Integrated in tank gauging systems via Endress+Hauser Tank Side Monitor NRF590 (recommended).

Highly accurate measurement

For highly accurate measurements the measured variable must be transmitted using HART protocol to ensure the necessary resolution.

Performance characteristics

 For accuracy data for devices suitable for custody transfer measurement in accordance with OIML R85, see Ambient temperature range. →  19.

Reference operating conditions	<p>According to OIML R85:</p> <ul style="list-style-type: none"> ▪ Temperature: -25 °C to +55 °C (-13 °F to +131 °F) ▪ Atmospheric pressure ▪ Relative humidity (air): 65 % ±15 % ▪ Medium properties: e.g. medium with good reflectivity and calm surface ▪ Tank diameter: signal beam hits the tank wall only at one side ▪ No major interference reflections inside the signal beam
Maximum measured error	<p>Absolute accuracy: better than ±1 mm (0.04 in)</p> <p> Micropilot S versions for free space applications typically provide accuracy of ±0.8 mm (0.03 in), (2 sigma value). Depending on national calibration regulations, the permitted errors after the device has been installed on the tank are ±3 mm (0.12 in), (OIML, API)....</p>
Resolution	<ul style="list-style-type: none"> ▪ Digital: 0.1 mm ▪ Analog: 0.03 % of measuring range
Settling time	Typical: 15 sec
Hysteresis	0.3 mm (0.01 in)
Non-repeatability	0.3 mm (0.01 in)
Reaction time	<p>The reaction time depends on the parameter settings (min. 1 s).</p> <p>In case of fast level changes, the device needs the reaction time to indicate the new value.</p>
Long-term drift	The long-term drift is within the specified accuracy.
Influence of ambient temperature	Within the specified accuracy according to OIML R85.
Proof of accuracy of custody transfer versions	<p>The accuracy of each Micropilot S is confirmed by a calibration certificate that records the absolute and relative error at 10 measuring points during the final test. A Laser Interferometer (Jenaer Messtechnik ZLM 500) with an absolute accuracy of 0.1 mm is used as a reference for free space measurements with the FMR530/533.</p> <p>For stilling well measurements with the FMR532, NMI / PTB calibrated steel measuring tapes with an absolute accuracy of 0.25 mm are used as a reference.</p> <p>Each Micropilot S also comes with PTB and NMI type approvals to confirm suitability for custody transfer measurement. In addition, certificates confirming initial verification are available on request for all Micropilot S radar devices.</p>
Maximum fill speed	By the first pass trough of measuring range: 100 mm/min., thereafter unlimited.
Software reliability	<p>The software used in the radar device Micropilot S fulfills the requirements of OIML R85. This particularly includes:</p> <ul style="list-style-type: none"> ▪ Cyclical testing of data consistency ▪ Non-volatile memory ▪ Segmented data storage <p>The radar device Micropilot S continuously monitor the compliance with accuracy requirements for custody transfer measurements according to OIML R85. If the accuracy cannot be maintained, a specific alarm is generated on the local display and via the digital communication (→  30).</p>
Inventory control versions	<p>All device versions can be delivered as "Inventory Control" versions with reduced accuracy (±3 mm [0.12 in]) under reference conditions. No calibration certificate or type approval is supplied with these versions.</p> <p>Order code in the Product Configurator under "Weight + measure approval", Version "R" →  19</p>

Installation

Installation conditions

Standard installation

- No alignment is required.
- After mounting, the housing can be turned 350° in order to simplify access to the display and the terminal compartment.
- Planar axis vertical to flange.
- Measurements can be performed through an open ball valve without any problems.

Installation instructions

The planar stilling well antenna is specially designed for stilling well applications only. The emitted circular mode radar pattern is a must for high accuracy applications on stilling wells. This special mode allows the software to compensate for variations of the inside diameter of the stilling well and layering of adhering product. The diameter of the antenna itself fits in DN150 (6") stilling wells directly. Cone adapters allow installation on larger diameter stilling wells. A good match between well and adapter is essential. The Micropilot S with planar antenna can even be installed directly onto conical stilling wells and thereby often makes modifications of the stilling well unnecessary.

Recommendations for the stilling well

- Metal (no enamel coating, plastic on request).
- Constant diameter.
- When using a FMR532, an increase of the pipe diameter from DN150 to DN200 / DN200 to DN250 / DN250 to DN300 is acceptable. A larger step-width for the increase of the pipe diameter (e.g. DN150 to DN300) is possible if the upper part of the pipe has a suitable length. The length of the stilling well extension must be observed (see table, → 17).
If the length (see Fig. → 18) is less than "L", please contact Endress+Hauser to determine a suitable antenna adapter (separable antenna horn). We recommend a minimum length of 0.5 m (1.6 ft) between the upper end of the well and the extension. Ideally, a nozzle for manual gauging is used.
- Any rectangular increase of the pipe diameter has to be avoided.
- Weld seam as smooth as possible and on the same axis as the slots.
- For best radar propagation behavior holes it is recommended to have holes instead of slots. If slots can not be avoided, they should be as thin and short as possible.
- The hole diameter (deburred) can be 1/7 of the well diameter, but must not exceed 30 mm (1.18 in).
- Length and number of the holes do not affect the measurement.
- The maximum gap allowed between the antenna/horn and the wall of the stilling well is 5 mm (0.2 in).
- At intersections which occur, for example, when using a ball valve or when joining individual tube segments, gaps must be no larger than 1 mm (0.04 in).
- The stilling well must be smooth on the inside. Use extruded or parallel welded steel pipe. An extension of the pipe is possible with welded flanges or pipe sleeves. Flange and pipe have to be properly aligned at the inside.
- Do not weld through the pipe wall. The inside of the stilling well must remain smooth. In case of unintentional welding through the pipe, the weld seam and any unevenness on the inside need to be carefully removed and smoothed. Otherwise, strong interference echoes will be generated and material build-up will be promoted.

Measuring conditions

- The measuring range begins where, the beam hits the tank bottom. Particularly with dish bottoms or conical outlets the level cannot be detected below this point.
- For **overflow protection**, a safety distance (**SD**) should be added to the blocking distance (**BD**).
- Depending on its consistency, foam can either absorb microwaves or reflect them off its surface. Measurement is possible under certain conditions.
- The smallest possible measuring range **B** (see Fig. below) depends on the antenna version.
- In general, the zero point should be positioned at the end of the stilling well, as the electromagnetic waves do not propagate completely outside the well. It must be taken into account that the accuracy may be reduced in the area C. If this is not acceptable, we recommend positioning the zero point at a distance **C** (see Fig.) above the tank bottom in these applications.
- When using a **planar antenna**, especially for media with low dielectric constants (media group A and B, → 8), the end of the measuring range should not be closer than 1 m to the flange (see **A** in the diagram below).
- The safety distance (**SD**) is set at the factory to 0.5 m (1.6 ft) with alarm output.

1 Maximum level

Reference: Flange / BD (see Fig.)		Reference: Antenna tip (see Fig.)		
Blocking distance	Safety distance	recommended additional settings		
BD [m (ft)]	SD [m (ft)]	A [mm (in)]	B [m (ft)]	C [mm (in)]
1 (3.3)	0.5 (1.6)	1000 (39.4)	0.5 (1.6)	150 to 300 (5.91 to 11.8)

- i
 - Select antenna extension as big as possible. For intermediate sizes (e.g. 180 mm [7.09 in]), use next largest extension and adapt it mechanically. Maximum gap allowed between the antenna/horn and the wall of the stilling well is 5 mm (0.2 in).
 - The antenna extensions of the FMR532 is mounted with defined pressure. It is strongly advised not to dismantle the antenna extension.
 - Dimensions of a nozzle for manual gauging must be adapt to the dimensions of the horn antenna used, compare with → 35.

Behaviour if measuring range is exceeded

The behavior which results from the measuring range being exceeded can be configured by the user. The default setting is an error current of 22 mA and the output of a digital warning (E681).

Environment

Ambient temperature range	<p>Ambient temperature for the transmitter:</p> <ul style="list-style-type: none"> Standard: -40 °C to +80 °C (-40 °F to +176 °F) For custody transfer measurement: -25 °C to +55 °C (-13 °F to +131 °F) <p>For $T_u < -20$ °C (-4 °F) and $T_u > +60$ °C (+140 °F), the functionality of the LCD is restricted. A weather protection cover should be used for outdoor operation if the device is exposed to direct sunlight.</p>
Storage temperature	-40 °C to +80 °C (-40 °F to +176 °F)
Climate class	DIN EN 60068-2-38 (test Z/AD)
Degree of protection	<ul style="list-style-type: none"> Housing: IP65/68, NEMA 4X/6P Antenna: IP65/68, NEMA 4X/6P
Vibration resistance	DIN EN 60068-2-64 / IEC 68-2-64: 20 to 2000 Hz, 1 (m/s ²) ² /Hz
Cleaning of the antenna	The antenna can get contaminated, depending on the application. The emission and reception of microwaves can thus eventually be hindered. The degree of contamination leading to an error depends on the medium and the reflectivity, mainly determined by the dielectric constant ϵ_r . If the medium tends to cause contamination and deposits, cleaning on a regular basis is recommended. Care must be taken during spray-washing or mechanical cleaning to avoid damage to the antenna. The material compatibility has to be considered if cleaning agents are used! The maximum permitted temperature at the flange should not be exceeded
Electromagnetic compatibility (EMC)	<ul style="list-style-type: none"> Electromagnetic compatibility in accordance with all relevant requirements of the EN 61326 series and NAMUR recommendation (NE21). For details refer to the Declaration of Conformity. Maximum deviation < 0.5 % of the span. A standard installation cable is sufficient if only the analogue signal is used. Use a screened cable when working with a superimposed communications signal (HART).

Approvals for custody transfer applications

All aspects of OIML R85 are fulfilled.

Approvals for custody transfer applications	Version*

9	Screw	A2-70	

Endress+Hauser supplies DIN/EN flanges made of stainless steel according to AISI 316L (DIN/EN material number 1.4404 or 1.4435). With regard to their temperature stability properties, the materials 1.4404 and 1.4435 are grouped under 13E0 in EN 1092-1 Tab. 18. The chemical composition of the two materials can be identical.

Type plate for custody transfer applications

In addition to the standard type plate, the device features a type plate for custody transfer applications with the following statements:

- manufacturer
- device type
- label for custody transfer approval
PTB: "Z" with approval number and issuing agency, the 4-digit approval number is shown in the upper part of the "Z", the lower part shows year and month of type approval.
NMI: field for 5-digit approval number
- year of manufacturing
- space for imprinted tank identification number
- statement of measuring range suitable for custody transfer approval including unit
- statement of ambient temperature range suitable for calibration to regulatory standards.

The following statements are also required for calibration to regulatory standards. They are listed on the standard type plate and are not repeated here:

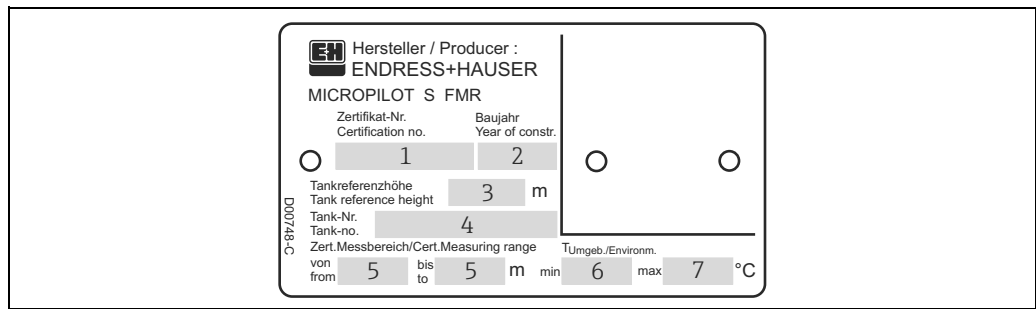

- date of manufacturing
- tester

The type plate for calibration to regulatory standards can be sealed. It is mounted with screws, therefore also available as a spare part. The "stamping" of the electronic compartment is achieved using the custody locking switch (see Fig. → 30), with the result that no additional stamping location is required.

The fields are only filled if in feature "70 - Weight + measure approval" the variant "F" or "G" is selected.

NMi type plate (example)

- 1 Certificate number
- 2 Year of manufacture
- 3 Tank reference height
- 4 Tank number
- 5 Certified measuring range from ... to
- 6 Min. ambient temperature
- 7 Max. ambient temperature

PTB type plate (example)

- 1 Approval number
- 2 Year and month of type approval
- 3 Year of manufacture
- 4 Tank reference height
- 5 Tank number
- 6 Certified measuring range from ... to
- 7 Min. ambient temperature
- 8 Max. ambient temperature

Endress+Hauser UNI flange

Installation hints

Endress+Hauser UNI flanges are designed for non-pressurized operation. Typical pressure fluctuations of breather valves can be tolerated. The number of bolts has sometimes been reduced. The bolt-holes have been enlarged to allow for the dimensions to be adapted. Therefore, the flange must be properly aligned with the counterflange before the bolts are tightened.

Operability

Operation concept

The display of the process value and the configuration of the Micropilot is done locally by means of a large 4-line alphanumeric display with plain text information. The guided menu system with integrated help texts ensures a quick and safe commissioning. Display and operation are possible in any one of seven languages (English, German, French, Italian, Dutch, Spanish or Japanese). During the first start-up, the device explicitly asks for the desired unit / language. To access the display the cover of the electronic compartment may be removed even in hazardous area (Ex ia, IS). Remote commissioning, including documentation of the measuring point and in-depth analysis functions, is supported via FieldCare, the FDT-based Plant Asset Management Tool by Endress+Hauser.

Access to the electronics can be prevented by means of a custody locking switch that locks the device settings.

The custody locking switch can be sealed for custody transfer applications.

Local operation

Operation with VU331

Using the LC-Display, configuration is possible directly at the device via the operating keys. All device functions can be set through a menu system. The menu consists of function groups and functions. Within a function, application parameters can be read or adjusted. The user is guided through a complete configuration procedure.

- 1 Operating keys
- 2 Bar graph
- 3 Symbols
- 4 Function name
- 5 Parameter identification number

Remote operation

The Micropilot S can be remotely operated via HART. On-site adjustments are also possible.

Operation with FieldCare

FieldCare is an Endress+Hauser asset management tool based on FDT technology. With FieldCare, you can configure all Endress+Hauser devices as well as devices from other manufacturers that support the FDT standard. Hardware and software requirements you can find on the internet: www.de.endress.com → Search: FieldCare → FieldCare → Technical data.

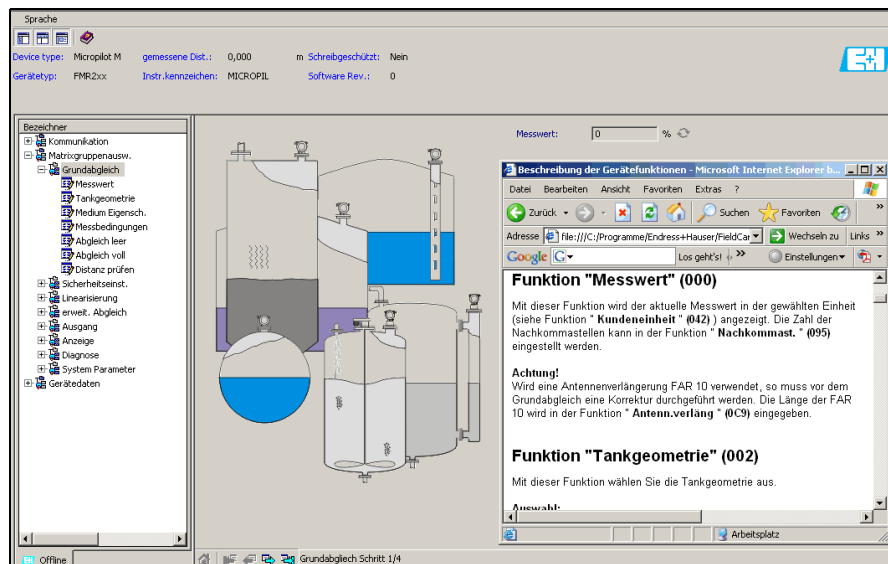

FieldCare supports the following functions:

- Configuration of transmitters in online operation
- Signal analysis via envelope curve
- Tank linearization
- Loading and saving device data (upload/download)
- Documentation of measuring point

Connection options:

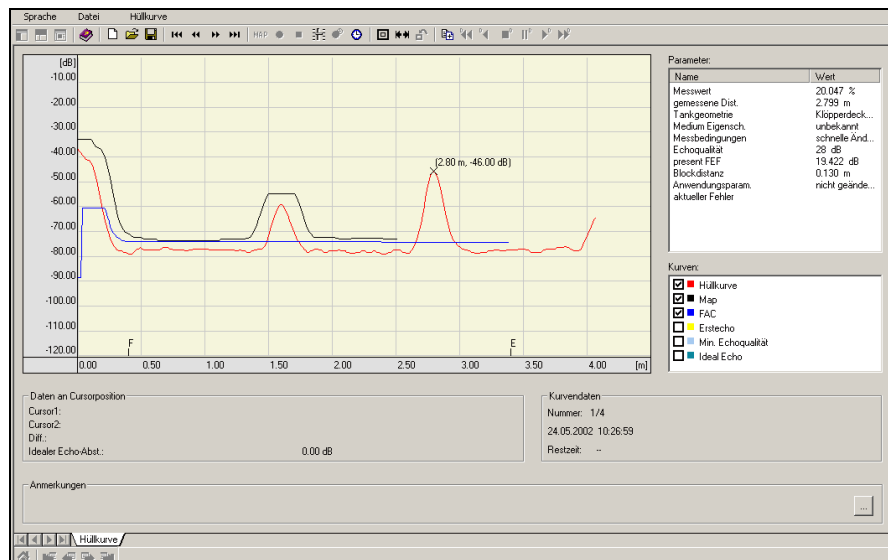

- HART via Commubox FXA195 and the USB port on a computer
- Commubox FXA291 with ToF Adapter FXA291 (USB) via service interface

Menu-guided commissioning

A0021213-EN

Operation with Field Communicator 475

With the Field Communicator 475, all device functions can be configured via a menu operation.

Further information on the handheld terminal can be found in the relevant Operating Instructions included in the transport bag of the Field Communicator 475.

Display elements

Liquid crystal display (LCD):

Four lines with 20 characters each. Display contrast adjustable through key combination.

A0020494-EN

- | | | | |
|---|------------------------|---|------------------------|
| 1 | Liquid crystal display | 5 | Red LED |
| 2 | Symbols | 6 | Green LED |
| 3 | Operating keys | 7 | Custody locking switch |
| 4 | Snap fit | 8 | Sealing pin |

i To access the display, it is possible to open the cover of the electronics compartment even in an explosion hazardous area. The LCD can be removed for easy operation by simply pressing the snap fit (see graphic above). It is connected to the device by means of a 500 mm (19.7 in) long cable.

Display symbols

The following table describes the symbols that appear on the liquid crystal display:

Symbols	Meaning
	ALARM_SYMBOL This alarm symbol appears when the device is in an alarm state. If the symbol flashes, this indicates a warning.
	LOCK_SYMBOL This lock symbol appears when the device is locked, i.e. if no input is possible.
	COM_SYMBOL This communication symbol appears when a data transmission via e.g. HART is in progress.
	Calibration to regulatory standards disturbed If the device is not locked or suitability for custody transfer measurement cannot be guaranteed, this will be indicated on the display by this symbol.

Light emitting diodes (LEDs):

There is a green and a red LED beside the LCD.

LED	Meaning
red LED continuously on	Alarm
red LED flashes	Warning
red LED off	No alarm
green LED continuously on	Operation
Green LED flashes	Communication with external device

Operating elements

The operating elements are located inside the housing and are accessible for operation by opening the lid of the housing.

Function of the keys

Key(s)	Meaning
 or 	<ul style="list-style-type: none"> ▪ Navigate upwards in the selection list. ▪ Edit numeric value within a function.
 or 	<ul style="list-style-type: none"> ▪ Navigate downwards in the selection list. ▪ Edit numeric value within a function.
 or 	Navigate to the left within a function group.
	<ul style="list-style-type: none"> ▪ Navigate to the right within a function group. ▪ Confirm entries.
 and  or  and 	Contrast settings of the LCD.
 and  and 	Hardware lock / unlock After a hardware lock, an operation of the device via display or communication is not possible! The hardware can only be unlocked via the display. An unlock parameter must be entered to do so.

Certificates and approvals

CE approval	The measuring system meets the legal requirements of the EC-guidelines. Endress+Hauser confirms the device passing the required tests by attaching the CE-mark.
C-Tick symbol	The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".
Ex approval	<ul style="list-style-type: none"> ▪ ATEX ▪ CSA ▪ FM ▪ NEPSI ▪ TIIS <p>When operating in hazardous areas, additional safety instructions must be observed. These can be found in the separate document entitled "Safety Instructions" (XA), which is included in the scope of delivery. The applicable XA is indicated on the nameplate.</p> <p> Details on the certificates available and the relevant XAs can be found in the "Documentation" section under "Safety instructions" →  37.</p>
Overfill prevention	WHG, see ZE00243F/00/DE.
RF approvals	R&TTE 1999/5/EG, FCC CRF 47, part 15
CRN approvals	Versions with a CRN approval (Canadian Registration Number) are listed in the corresponding registration documents. CRN-approved devices are assigned the registration number OF10904.5CADD2.
Custody type approval	All aspects of OIML R85 are fulfilled.
External standards and guidelines	<p>EN 60529 Protection class of housing (IP-code)</p> <p>EN 61010 Safety regulations for electrical devices for measurement, control, regulation, and laboratory use</p> <p>EN 61326 Emissions (equipment class B), compatibility (appendix A – industrial area)</p> <p>NAMUR Standards committee for measurement and control in the chemical industry</p> <p>To conception and development for Micropilot S have been followed the external standards and guidelines:</p> <p>API (American Petroleum Institute) Particularly "Manual of Petroleum Measurement Standards"</p> <p>OIML R85 (Organisation Internationale de Métrologie Légale)</p>

Ordering information

Ordering information

Detailed ordering information is available as follows:

- In the Product Configurator on the Endress+Hauser website: www.endress.com → Select country → Instruments → Select device → Product page function: Configure this product
- From your Endress+Hauser sales center: www.endress.com/worldwide

Product Configurator - the tool for individual product configuration

- Configuration data updated on a daily basis
- Depending on the device: Direct input of data specific to measuring point, such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic generation of order code with breakdown in PDF or Excel output format
- Possibility to order directly from the Endress+Hauser online shop

Scope of delivery

The scope of delivery comprises:

- Device, mounted
- Optional accessories
- 2 lead seals
- CD-ROM with Endress+Hauser operating software
- Brief Operating Instructions KA01057F/00/EN for fast commissioning (included with device)
- Brief Operating Instructions KA00161F/00/A2 (basic calibration/trouble-shooting), stored in device
- Approval documentation, if not included in the Operating Instructions
- CD-ROM with additional technical documentation, e.g.
 - Operating Instructions
 - Description of Instrument Functions

Accessories

A variety of accessories is available for the Micropilot S. They can be ordered separately from Endress+Hauser.

Device-specific accessories

Weather protection cover

A weather protection cover made of stainless steel is available for outdoor installation (order code: 543199-0001). The shipment includes the protective cover and tension clamp.

Engineering unit mm (in)

A Housing T12

Nozzle for manual gauging

Installation hints

For control and cleaning purposes for sample taking as well as for hand dipping (tape), a nozzle for manual gauging is recommended. The sensor head of FMR532 (planar antenna!) can be easily checked in the area of the opening.

Manual gauging with gauge rod or tape is possible without removal of the transmitter. The lower edge of the opening is the reference for the gauging. The construction is only suitable for non-pressurized operation and should be used for the planar antenna version FMR532 only.

The nozzle for manual gauging is not part of the standard offering from Endress+Hauser. For more information, please contact your Endress+Hauser sales center.

Engineering unit mm (in)

- 1 Quick fastening mechanism
- 2 Door with seal, opening
- 3 Reference position
- 4 Flange size as per tank
- 5 Tank nozzle; stilling well

Flange	DN150	DN200	DN250/300	Flange	ANSI 6"	ANSI 8"	ANSI 10"
PN [bar] ¹⁾	16	16	16	PN [lbs]1)	150	150	150
A [mm]	110	140	170	A [mm]	110	140	170
L [mm]	—	300	450	L [mm]	—	300	450

1) Only dimensions adapted to standard. Designed for non-pressurized operation only; therefore thickness of flange can be reduced (e.g. 8 mm (0.31 in) thick).

Communication-specific accessories

Commubox FXA195 HART

For intrinsically safe communication with FieldCare via the USB interface. For details refer to TI00404F/00/EN.

Commubox FXA291

The Commubox FXA291 connects Endress+Hauser field devices with CDI interface (= Endress+Hauser Common Data Interface) to the USB interface of a personal computer or a notebook. For details refer to TI00405C/07/EN.

For the device you need the "ToF Adapter FXA291" as an additional accessory.

ToF Adapter FXA291

The ToF Adapter FXA291 connects the Commubox FXA291 via the USB interface of a personal computer or a notebook to the device. For details refer to KA00271F/00/A2.

Field Xpert

Compact, flexible and robust industrial handheld terminal for remote configuration and measured value retrieval via HART current output and via FOUNDATION Fieldbus. For details, see Operating Instructions BA00060S.

Service-specific accessories**FieldCare**

FDT-based Plant Asset Management Tool from Endress+Hauser. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition. For details, see Operating Instructions BA00027S and BA00059S.

Supplementary Documentation

Standard documentation

The following document types are available:
