## Technical Information

# Omnigrad M TR11

Modular RTD assembly  
protection tube, thread

### Application

- Universal range of application
- Measuring range: -200...600 °C (-328...1112 °F)
- Pressure range up to 75 bar (1088 psi)
- Degree of protection: up to IP 68

### Head transmitters

All Endress+Hauser transmitters are available with enhanced accuracy and reliability compared to directly wired sensors. Easy customizing by choosing one of the following outputs and communication protocols:

- Analog output 4...20 mA
- HART®
- PROFIBUS® PA
- FOUNDATION Fieldbus™

### Your benefits

- High flexibility due to modular assembly with standard terminal heads and customized immersion length
- Highest possible compatibility with a design according to DIN 43772
- Fast response time with reduced/tapered tip form
- Types of protection for use in hazardous locations:  
Intrinsic Safety (Ex ia)  
Non-Sparking (Ex nA)

## Function and system design

### Measuring principle

These resistance thermometers use a Pt100 temperature sensor according to IEC 60751. This temperature sensor is a temperature-sensitive platinum resistor with a resistance of 100  $\Omega$  at 0 °C (32 °F) and a temperature coefficient  $\alpha = 0.003851 \text{ }^{\circ}\text{C}^{-1}$ .

There are generally two different kinds of platinum resistance thermometers:

- **Wire wound (WW):** Here, a double coil of fine, high-purity platinum wire is located in a ceramic support. This is then sealed top and bottom with a ceramic protective layer. Such resistance thermometers not only facilitate very reproducible measurements but also offer good long-term stability of the resistance/temperature characteristic within temperature ranges up to 600 °C (1112 °F). This type of sensor is relatively large in size and it is comparatively sensitive to vibrations.
- **Thin film platinum resistance thermometers (TF):** A very thin, ultrapure platinum layer, approx. 1  $\mu\text{m}$  thick, is vaporized in a vacuum on a ceramic substrate and then structured photolithographically. The platinum conductor paths formed in this way create the measuring resistance. Additional covering and passivation layers are applied and reliably protect the thin platinum layer from contamination and oxidation even at high temperatures.

The primary advantages of thin-film temperature sensors over wire wound versions are their smaller sizes and better vibration resistance. A relatively low principle-based deviation of the resistance/temperature characteristic from the standard characteristic of IEC 60751 can frequently be observed among TF sensors at high temperatures. As a result, the tight limit values of tolerance category A as per IEC 60751 can only be observed with TF sensors at temperatures up to approx. 300 °C (572 °F). For this reason, thin-film sensors are generally only used for temperature measurements in ranges below 400 °C (932 °F).

### Measuring system

Example of an application

- A Built-in RTD assembly TR11 with head transmitter
- B RIA261 Field display
  - The display measures an analog measurement signal and indicates this on the display. The display is connected in a 4 to 20 mA current loop and also derives its supply from the loop. The voltage drop is almost negligible ( $< 2.5 \text{ V}$ ). The dynamic internal resistance (load) makes sure that independently from the loop current, the maximum voltage drop is never exceeded. The analog signal at the input is digitalized, analyzed, and shown in the rear illuminated display. For details see Technical Information (see chapter "Documentation").
- C Active barrier RN221N
  - The RN221N active barrier (24 V DC, 30 mA) has a galvanically isolated output for supplying voltage to loop powered transmitters. The power supply has a wide-range input for mains power, 20 to 250 V DC/AC, 50/60 Hz to be used in any electrical circuit. For details see Technical Information (see chapter "Documentation").

Equipment architecture

Equipment architecture of the Omnigrad M TR11

- |   |  |
|---|--|
| 1 Insert (Ø 3 mm, 0.12 in) with mounted head transmitter, for example       | 6 Various tip shapes - detailed information see chapter 'tip shape': |
| 2 Insert (Ø 6 mm, 0.24 in) with mounted ceramic terminal block, for example | 6a Reduced or tapered for inserts with Ø 3 mm (0.12 in)              |
| 3 Terminal head   | 6b Straight or tapered for inserts with Ø 6 mm (0.24 in)             |
| 4 Protection armature   | E Neck tube = 35 mm (1.4 in)   |
| 5 Threads as process connection   | L Immersion length   |
|   | IL Insertion length = L + 45 mm (1.8 in)                             |

The Omnigrad M TR11 RTD assemblies are modular. The terminal head serves as a connection module for the protection armature in the process as well as for the mechanical and electrical connection of the measuring insert. The actual RTD sensor element is fitted in and mechanically protected within the insert. The insert can be exchanged and calibrated even during the process. Either ceramic terminal blocks or transmitters can be fitted to the internal base washer. TR11 RTD assemblies are constructed without a neck.

**Measurement range** -200...+600 °C (-328...+1112 °F)

Performance characteristics

Operating conditions

Ambient temperature

Terminal head	Temperature in °C (°F)
Without mounted head transmitter	Depends on the terminal head used and the cable gland or fieldbus connector, see 'Terminal heads' section, → 8
With mounted head transmitter	-40 to 85 °C (-40 to 185 °F)
With mounted head transmitter and display	-20 to 70 °C (-4 to 158 °F)

### Process pressure

The pressure values to which the actual protection tube can be subjected at the various temperatures and maximum permitted flow velocity are illustrated by the figure below. Occasionally, the pressure loading capacity of the process connection can be considerably lower. The maximum allowable process pressure for a specific thermometer is derived from the lower pressure value of the thermowell and process connection.

Maximum permitted process pressure for tube diameter, limited to 75 bar (1088 psi) by the threaded process connection

- Protection tube diameter 9 x 1 mm (0.35 in) —————
- Protection tube diameter 12 x 2.5 mm (0.47 in) - - - - -

A Medium water at T = 50 °C (122 °F)  
 B Medium superheated steam at T = 400 °C (752 °F)  
 L Immersion length

P Process pressure  
 P<sub>max.</sub> Maximum permitted process pressure, limited by the process connection

### Maximum flow velocity

The highest flow velocity tolerated by the protection tube diminishes with increasing immersion length exposed to the stream of the fluid. Detailed information may be taken from the figures below.

Flow velocity depending on the immersion length

- Protection tube diameter 9 x 1 mm (0.35 in) —————
- Protection tube diameter 12 x 2.5 mm (0.47 in) - - - - -

A Medium water at T = 50 °C (122 °F)  
 B Medium superheated steam at T = 400 °C (752 °F)

L Immersion length  
 v Flow velocity

### Shock and vibration resistance

3g / 10 to 500 Hz as per IEC 60751 (RTD-Thermometer)

**Accuracy**

RTD corresponding to IEC 60751

Class	max. Tolerances (°C)	Temperature range	Characteristics
RTD max. error type TF - range: -50 to +400 °C			
Cl. A	$\pm (0.15 + 0.002 \cdot  t ^{1.1})$	-50 °C to +250 °C	
Cl. AA, former 1/3 Cl. B	$\pm (0.1 + 0.0017 \cdot  t ^{1.1})$	0 °C to +150 °C	
Cl. B	$\pm (0.3 + 0.005 \cdot  t ^{1.1})$	-50 °C to +400 °C	
RTD max. error type WW - range: -200 to +600 °C			
Cl. A	$\pm (0.15 + 0.002 \cdot  t ^{1.1})$	-200 °C to +600 °C	
Cl. AA, former 1/3 Cl. B	$\pm (0.1 + 0.0017 \cdot  t ^{1.1})$	0 °C to +250 °C	
Cl. B	$\pm (0.3 + 0.005 \cdot  t ^{1.1})$	-200 °C to +600 °C	

1)  $|t|$  = absolute value °C

Note!

For measurement errors in °F, calculate using equations above in °C, then multiply the outcome by 1.8.

**Response time**

Tests in water at 0.4 m/s (1.3 ft/s), according to IEC 60751; 10 K temperature step change. Measuring probe Pt100, TF/WW:

<b>Protection tube</b>				
Diameter	Response time	Reduced tip Ø 5.3 mm (0.2 in)	Tapered tip Ø 6.6 mm (0.26 in) or Ø 9 mm (0.35 in)	Straight tip
9 x 1 mm (0.35 in)	$t_{50}$ $t_{90}$	7.5 s 21 s	11 s 37 s	18 s 55 s
11 x 2 mm (0.43 in)	$t_{50}$ $t_{90}$	7.5 s 21 s	not available not available	18 s 55 s
12 x 2.5 mm (0.47 in)	$t_{50}$ $t_{90}$	not available not available	11 s 37 s	38 s 125 s

Note!

Response time for the sensor assembly without transmitter.

**Insulation resistance**Insulation resistance  $\geq 100 \text{ M}\Omega$  at ambient temperature.

Insulation resistance between each terminal and the sheath is measured with a voltage of 100 V DC.

**Self heating**

RTD elements are passive resistances that are measured using an external current. This measurement current causes a self heating in the RTD element itself which in turn creates an additional measurement error. In addition to the measurement current the size of the measurement error is also affected by the temperature conductivity and flow velocity of the process. This self heating error is negligible when an Endress+Hauser iTEMP® temperature transmitter (very small measurement current) is connected.

**Calibration specifications**

Endress+Hauser provides comparison temperature calibration from -80 to +600 °C (-110 °F to 1112 °F) based on the International Temperature Scale (ITS90). Calibrations are traceable to national and international standards. The calibration report is referenced to the serial number of the thermometer. Only the measurement insert is calibrated.

Insert-Ø: 6 mm (0.24 in) and 3 mm (0.12 in)	Minimum insertion length IL in mm (in)	
Temperature range	without head transmitter	with head transmitter
-80 °C to -40 °C (-110 °F to -40 °F)	200 (7.87)	
-40 °C to 0 °C (-40 °F to 32 °F)	160 (6.3)	
0 °C to 250 °C (32 °F to 480 °F)	120 (4.72)	150 (5.9)
250 °C to 550 °C (480 °F to 1020 °F)	300 (11.81)	
550 °C to 650 °C (1020 °F to 1202 °F)	400 (15.75)	

**Material**

Protection tube, measuring insert.

The temperatures for continuous operation specified in the following table are only intended as reference values for use of the various materials in air and without any significant compressive load. The maximum operation temperatures are reduced considerably in some cases where abnormal conditions such as high mechanical load occur or in aggressive media.

Material name	Short form	Recommended max. temperature for continuous use in air	Properties
AISI 316L/ 1.4404 1.4435	X2CrNiMo17-12-2 X2CrNiMo18-14-3	650 °C (1200 °F) <sup>1)</sup>	<ul style="list-style-type: none"> <li>■ Austenitic, stainless steel</li> <li>■ High corrosion resistance in general</li> <li>■ Particularly high corrosion resistance in chlorine-based and acidic, non-oxidizing atmospheres through the addition of molybdenum (e.g. phosphoric and sulfuric acids, acetic and tartaric acids with a low concentration)</li> <li>■ Increased resistance to intergranular corrosion and pitting</li> <li>■ Compared to 1.4404, 1.4435 has even higher corrosion resistance and a lower delta ferrite content</li> </ul>
AISI 316Ti/ 1.4571	X6CrNiMoTi17-12-2	700 °C (1292 °F) <sup>1)</sup>	<ul style="list-style-type: none"> <li>■ Properties comparable to AISI316L</li> <li>■ Addition of titanium means increased resistance to intergranular corrosion even after welding</li> <li>■ Broad range of uses in the chemical, petrochemical and oil industries as well as in coal chemistry</li> <li>■ Can only be polished to a limited extent, titanium streaks can form</li> </ul>

- 1) Can be used to a limited extent up to 800 °C (1472 °F) for low compressive loads and in non-corrosive media. Please contact your Endress+Hauser sales team for further information.

**Transmitter specifications**

	TMT180 PCP Pt100	TMT181 PCP Pt100, TC, Ω, mV	TMT182 HART® Pt100, TC, Ω, mV	TMT84 PA / TMT85 FF Pt100, TC, Ω, mV
Measurement accuracy	0.2 °C (0.36 °F), optional 0.1 °C (0.18 °F) or 0.08%  % is related to the adjusted measurement range (the larger value applies)	0.2 °C (0.36 °F) or 0.08%		0.1 °C (0.18 °F)
Sensor current	I ≤ 0.6 mA		I ≤ 0.2 mA	I ≤ 0.3 mA
Galvanic isolation (input/output)	-		Û = 2 kV AC	

**Transmitter long-term stability**

$\leq 0.1\text{ }^{\circ}\text{C/year}$  ( $\leq 0.18\text{ }^{\circ}\text{F / year}$ ) or  $\leq 0.05\% / \text{year}$   
 Data under reference conditions; % relates to the set span. The larger value applies.

## Components

**Family of temperature transmitters**

Thermometers fitted with iTEMP® transmitters are an installation ready complete solution to improve temperature measurement by increasing accuracy and reliability, when compared to direct wired sensors, as well as reducing both wiring and maintenance costs.

**PC programmable head transmitter TMT180 and TMT181**

They offer a high degree of flexibility, thereby supporting universal application with low inventory storage. The iTEMP® transmitters can be configured quickly and easily at a PC. Endress+Hauser offers the ReadWin® 2000 configuration software for this purpose. This software can be downloaded free of charge at **www.readwin2000.com**. More information can be found in the Technical Information (see "Documentation" section).

**HART® TMT182 head transmitter**

HART® communication is all about easy, reliable data access and getting additional information about the measurement point more inexpensively. iTEMP® transmitters integrate seamlessly into your existing control system and provide painless access to numerous diagnostic information.

Configuration with a hand-held (Field Xpert SFX100 or DXR375) or a PC with configuration program (FieldCare, ReadWin® 2000) or configure with AMS or PDM. Details see Technical Information (see chapter 'Documentation').

Type of transmitter	Specification
iTEMP® TMT18x 	<ul style="list-style-type: none"> <li>Material: Housing (PC), Potting (PUR)</li> <li>Terminals: Cable up to max. <math>\leq 2.5\text{ mm}^2 / 16\text{ AWG}</math> (secure screws) or with wire end ferrules</li> <li>Eyelets for easy connection of a HART®-handheld terminal with alligator clips</li> <li>Degree of protection NEMA 4 (see also type of terminal head)</li> </ul> Details see Technical Information (see chapter 'Documentation')

**PROFIBUS® PA TMT84 head transmitter**

Universally programmable head transmitter with PROFIBUS® PA communication. Converting various input signals into a digital output signal. High accuracy over the complete ambient temperature range. Swift and easy operation, visualization and maintenance using a PC directly from the control panel, e. g. using operating software such as FieldCare, Simatic PDM or AMS.

Benefits are: dual sensor input, highest reliability in harsh industrial environments, mathematic functions, thermometer drift monitoring, sensor back-up functionality, sensor diagnosis functions and sensor-transmitter matching using Callendar-Van Dusen coefficients. Details see Technical Information (see chapter 'Documentation').

**FOUNDATION Fieldbus™ TMT85 head transmitter**

Universally programmable head transmitter with FOUNDATION Fieldbus™ communication. Converting various input signals into a digital output signal. High accuracy over the complete ambient temperature range. Swift and easy operation, visualization and maintenance using a PC directly from the control panel, e. g. using operating software such as ControlCare from Endress+Hauser or the NI Configurator from National Instruments.

Benefits are: dual sensor input, highest reliability in harsh industrial environments, mathematic functions, thermometer drift monitoring, sensor back-up functionality, sensor diagnosis functions and sensor-transmitter matching using Callendar-Van Dusen coefficients. Details see Technical Information (see chapter 'Documentation').

## Terminal heads

All terminal heads have an internal shape and size in accordance with DIN EN 50446, flat face and a thermometer connection of M24x1.5.

All dimensions in mm (in). The cable glands in the diagrams correspond to M20x1.5 connections.

Specifications without head transmitter installed. For ambient temperatures with head transmitter installed, see 'Operating conditions' section.

			NPT 3/4"	8.5 (0.33)	

## Spare parts

- A thermowell is available as spare part TW11 (see Technical Information in chapter 'Documentation').
- The RTD insert is available as spare part TPR100 (see Technical Information in chapter 'Documentation').

If spare parts are required, refer to the following equation: **Insertion length IL = L + 45 mm (1.8 in)**

Spare part	Material-No.
Gasket M21-G1/2", copper	60001328
Gasket M27-G3/4", copper	60001344
Gasket set M24x1.5, aramid+NBR (10 pieces)	60001329

# Wiring

## Wiring diagrams

Type of sensor connection

### Head mounted transmitter TMT18x (single input)

Power supply  
head transmitter and  
analog output 4 to 20 mA,  
or bus connection

3-wire

4-wire

T09-TH1112xx-04-xx-XX-ae-000

### Head mounted transmitter TMT84 and TMT85 (dual input)

Sensor input 2

RTD: 3-wire

Sensor input 1

RTD: 4- and 3-wire

Bus connection  
and supply voltage

Display connection

a0008848-en

### Terminal block mounted

1 x Pt 100

4 wires

1 x Pt 100

3 wires

2 x Pt 100

3 wires

a0008591-en

## Installation conditions

### Orientation

No restrictions.

### Installation instructions

#### Installation examples

A - B: In pipes with a small cross section the sensor tip should reach or extend slightly past the center line of the pipe ( $= L$ ).  
C - D: Tilted installation.

The immersion length of the thermometer influences the accuracy. If the immersion length is too small then errors in the measurement are caused by heat conduction via the process connection and the container wall. If installing into a pipe then the immersion length must be half of the pipe diameter, ideally.

- Installation possibilities: Pipes, tanks or other plant components
- Minimum immersion length = 80 to 100 mm (3.15 to 3.94 in)  
The immersion length should correspond to at least 8 times of the thermowell diameter. Example:  
Thermowell diameter 12 mm (0.47 in)  $\times 8 = 96$  mm (3.8 in). A standard immersion length of 120 mm (4.72 in) is recommended
- ATEX certification: Always take note of the installation regulations!

#### Note!

When operating in small nominal bore pipes it must be guaranteed that the thermowell tip is extending far enough into the process to reach out past the pipe center line (see Pos. A and B). A further solution could be an angled (tilted) installation (see Pos. C and D). When determining the immersion length all thermometer parameters and the process to be measured must be taken into account (e.g. flow velocity, process pressure).

## Certificates and approvals

<b>CE Mark</b>	The device meets the legal requirements of the EC directives if applicable. Endress+Hauser confirms that the device has been successfully tested by applying the CE mark.
<b>Hazardous area approvals</b>	For further details on the available Ex versions (ATEX, CSA, FM, etc.), please contact your nearest Endress+Hauser sales organization. All relevant data for hazardous areas can be found in separate Ex documentation. If required, please request copies.
<b>Other standards and guidelines</b>	<ul style="list-style-type: none"> <li>■ IEC 60529: Degrees of protection by housing (IP-Code).</li> <li>■ IEC 61010-1: Safety requirements for electrical measurement, control and laboratory instrumentation.</li> <li>■ IEC 60751: Industrial platinum resistance thermometer</li> <li>■ DIN43772: Thermowells</li> <li>■ DIN EN 50446, DIN 47229: Terminal heads</li> <li>■ IEC 61326-1: Electromagnetic compatibility (EMC requirements)</li> </ul>
<b>PED approval</b>	The thermometer complies with paragraph 3.3 of the Pressure Equipment Directive (97/23/CE) and is not marked separately.
<b>Material certification</b>	The material certificate 3.1 (according to standard EN 10204) can be directly selected from the sales structure of the product and refers to the parts of the sensor in contact with the process fluid. Other types of certificates related to materials can be requested separately. The "short form" certificate includes a simplified declaration with no enclosures of documents related to the materials used in the construction of the single sensor and guarantees the traceability of the materials through the identification number of the thermometer. The data related to the origin of the materials can subsequently be requested by the client if necessary.
<b>Test on thermowell</b>	Thermowell pressure tests are carried out in accordance with the specifications in the DIN 43772 standard. With regards to thermowells with tapered or reduced tips that do not comply with this standard these are tested using the pressure of corresponding straight thermowells. Sensors certified for use in Ex Zones, are always tested to pressures according to the same criteria. Tests according to other specifications can be carried out on request. Dye penetration tests verify the absence of cracks on the thermowell welding.
<b>Test report and calibration</b>	The "Factory calibration" is carried out according to an internal procedure in a laboratory of Endress+Hauser accredited by the European Accreditation Organization (EA) to ISO/IEC 17025. A calibration which is performed according to EA guidelines (SIT or DKD calibration) may be requested separately. The calibration is performed on the replaceable insert of the thermometer. In the case of thermometers without a replaceable insert, the entire thermometer – from the process connection to the tip of the thermometer – is calibrated.

## Ordering information

### Product structure

This information provides an overview of the order options available. The information is not exhaustive, however, and may not be fully up to date. **More detailed** information is available from your local Endress+Hauser representative.
