## Humidity / Temperature Transmitter for High Humidity and Chemical Applications

The highly accurate EE33 series are designed for fast and reliable measurement of relative humidity / dew point temperature / absolute humidity / ...under the most demanding conditions.

Neither condensation nor heavy chemical pollutions will affect prompt and reliable measurements. Process pressures as high as 100 bar (1450 psi) and continuous high humidity are also no problem for the EE33 series.

The core of the EE33 series is the new monolithic measurement cell type HMC1, manufactured in thin-film technology by E+E Elektronik.

Chemical contamination and also condensation will actually evaporate due to the innovative design of the HMC1 measurement cell. The monolithic construction of the sensor allows a fast return to normal conditions and a continuation of the measurement.

Additionally, with the inimitable E+E sensor coating the HMC1 measurement cell is even better protected against corrosive and short-circuit-causing conductive soils.

Distinctive models and mounting versions allow the EE33 series to be utilized in numerous applications:

- **Measurement of relative humidity during temporary condensation:**  
the measurement cell is briefly heated, but very intense
- **Measurement of dew point temperature at continuous high humidity:**  
the measurement cell is controlled and heated continuously
- **Measurement of relative humidity at continuous high humidity:**  
the measurement cell is controlled and heated continuously;  
an additional temperature sensor is added
- **Measurement of relative humidity at high chemical exposure and average humidity:**  
the measurement cell is briefly heated, but very intense
- **Measurement of relative humidity at process pressure up to 100bar (1450psi) and average humidity:**  
the measurement cell is installed in a special high pressure probe

The configuration software included in the scope of supply allows user friendly setup of the operation / sensor heating mode as well as selection and adjustment of the electrical outputs.

Model	Environmental Conditions
<b>C</b> - remote sensing probe up to 120°C (248°F)	chemical pollution, temporary condensation
<b>D</b> - remote sensing probe up to 180°C (356°F)	chemical pollution, temporary condensation
<b>E</b> - remote sensing probe, pressure tight up to 20bar (300psi)	chemical pollution, temporary condensation
<b>I</b> - remote sensing probe, pressure tight up to 100bar (1450psi)	chemical pollution, temporary condensation
<b>J</b> - 2 remote sensing probes (RH-measurement), pressure tight up to 20bar (300psi)	continuous high humidity and condensation
<b>K</b> - remote sensing probe (Td-measurement) pressure tight up to 20bar (300psi)	continuous high humidity and condensation

### Typical Applications

pharmaceutical and food industry  
 dryers for ceramics, wood, concrete, polyester, etc  
 mushroom farms  
 high-humidity storage rooms  
 climate, test and curing chambers  
 meteorology

### Features

heated, monolithic measurement cell  
 working range 0...100% RH / -40...+180°C (-40...356°F)  
 measurement near condensation  
 fast recovery after condensation  
 chemical purge after chemical exposure  
 pressure tight up to 100bar (1450psi)  
 calculation of additional physical quantities  
 optional sensor coating

## Functions

	Comment
Measurement of humidity and temperature	✓
Calculation h, r, dv, Tw, Td, Tf, e	✓
2 freely scaleable and configurable analogue outputs	✓
Remote sensing probe up to 20m (65.6ft)	✓
On-site adjustment for relative humidity and temperature	✓
LED indication of transmitter status / error diagnosis of probes	✓
RS232 for transmitter configuration via PC	✓
Configuration software	✓
Alternating display with MIN/MAX indication	optional
2 freely configurable alarm outputs	optional
Removeable sensing probe	optional
Sensor protection with coating	optional
Pluggable electrical connections	optional
Data output via RS232 interface	✓
Data output via RS485 interface	optional
Networking for up to 32 transmitters via RS485 bus	optional
Ethernet interface for networking and remote monitoring	optional
Data logging and analysis PC software	optional
ARC-Module for external triggering of sensor-heating	optional

## Networkability / Ethernet Interface

The optional RS485 interface (order code N) allows for building a network of up to 32 transmitters.

The measurement data can be collected in a shared database and made available for all kinds of further processing.

Additionally, the transmitters can be networked with an Ethernet module (order code E) for remote monitoring.

## Software

### Configuration Software (included in the scope of supply):

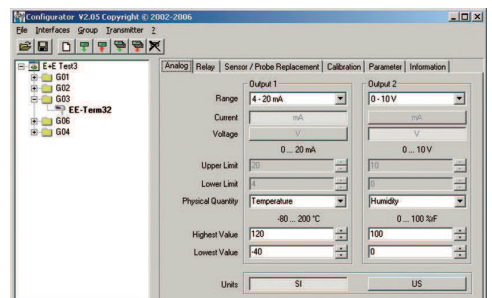

The configuration software allows flexible and simple adjustment of the analogue and alarm outputs in accordance with the requirements. The adjustment / calibration of the humidity and temperature outputs is possible as well. Furthermore the settings of the start and duration of the heating of the measurement cell can be defined.

### Data Logging / Analysis Software (optional):

An additional software package enables data recording and management, including alerts by e-mail or text message when set points are triggered.

It is also possible to present the collected measurement data on a PC in graphs or tables. If the option N (RS485) or E (Ethernet) is selected in the ordering code, the data logging and analysis software will be included in the scope of supply.

## Integrated Display

The actual measurement data and the corresponding Min/Max values can be indicated in an optional display (order code D05). The physical quantity to be displayed is selected by the push buttons next to the display.

## Alarm Outputs

An optional alarm module with 2 relay outputs is available for control and alarm purposes (order code SW). The selection of the physical quantity and the setting of threshold and hysteresis can be made with the configuration software included in the scope of supply.
