

BT-SSD-270

Swivelling bracket with vibration damping, 270 mm

The long swivelling mounting bracket is used for mounting multiple light beam safety devices or safety light curtains in case of strong shock and vibration strain.

Features

- Simplification of the transmitter-receiver-adjustment of multiple light beam safety devices or safety light curtains
- Simplification of the adjustment of the transmitter alignment-laser of multiple light beam safety devices with integrated alignment-laser
- Turning the sensor around the longitudinal axis is possible
- Grounding strap connecting to machine-ground against damages by electrostatic loading

Dimensional drawings

Electrical connection

- i** As preventive measure against damages by electrostatic loading of the safety device is recommended to ground the sensor housing profile via the BT-SSD-270 mounting bracket to machine ground. If swivelling mounting brackets are used for mounting safety sensor devices the correct connection of the grounding strap, which is part of the scope of delivery, must be ensured with the installation.

a = required conductive stay washer
b = grounding strap also supplied
