

### GB with threaded flange (GB-M / GB-T) Product Brief

- ▶ Sensor element and electronics can be changed
- ▶ Available with threaded flange M18×1.5 or ¾"-16 UNF
- ▶ Electrical connection is freely rotatable

The Temposonics® GB-M / GB-T sensors, designed to be incorporated into hydraulic cylinders, offer many user-adaptable features. The flat and compact sensor electronics housing has an electrical connection that can be rotated 360 degrees to easily achieve the necessary connection orientation. If needed, the sensor element and electronics can be replaced without interrupting the hydraulic circuit – resulting in lower maintenance costs and reduced downtime.

The GB-Series is highly resistant to external influences and features a high pressure resistant sensor rod, electronics with excellent immunity to EMI and an operating temperature up to +100 °C.

GB sensors can be programmed via a wireless Bluetooth® connection, a computer with USB connection or a hand programmer. Output for data exchange is available in SSI and analog (current / voltage).

#### TYPICAL APPLICATIONS

Typical uses for GB sensors include steam turbines, valves for turbines and applications with limited space or high operating temperatures.
