

NOVOPAD
Position Transducer
with return spring
up to 100 mm
non-contacting
Series LS1
with analog interface

Position transducer with return spring, based on our NOVOPAD non-contacting inductive measurement technology. Provides direct, accurate measurement of travel for display or feedback applications.

The push rod is supported on both ends by metal glide bearings, allowing high lateral forces on the tip of the rod. The robust and compact housing design make the LS1 a reliable solution for the industrial environment.

The design of the rear end stop nut on the push rod simplifies the connection of actuators like pneumatic cylinders and solenoids.

The integrated signal processor with programmable end-points (Teach-in) function provides an absolute and proportional voltage or current output signal. The LS1 uses a non-contacting technology, and is maintenance and wear free.

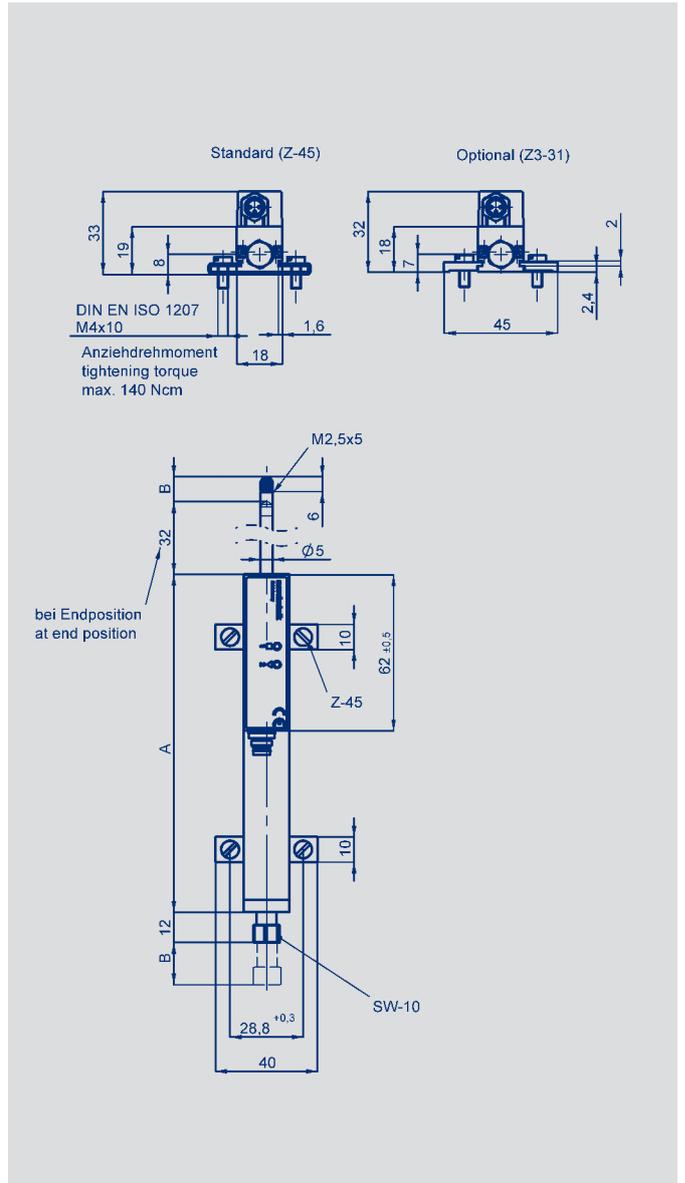

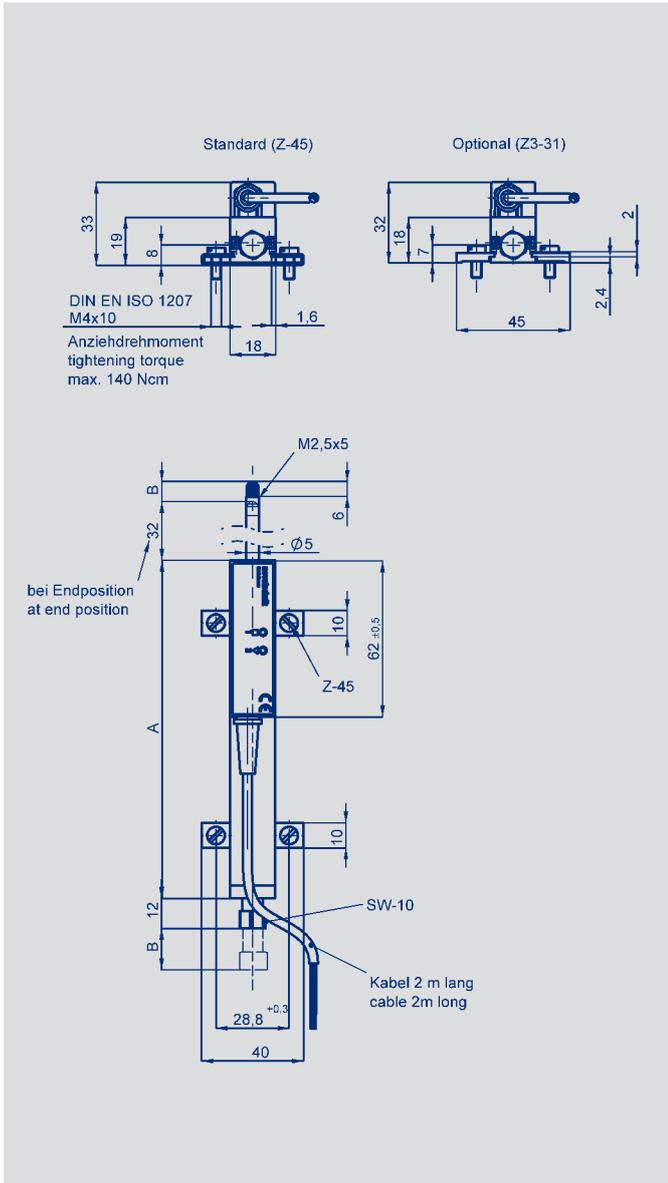

The transducers provide optimal reproducibility, resolution and linearity.

LS1 sensors can be exchanged without recalibration. Magnetic fields do not have any effect on the measurement signal.
