Automatic fire detectors

CE

collective/SynoLINE600 for explosion-hazard area of zones 1 and 2

- High degree of reliability and stability
- High resistance to
 - electromagnetic interference
 - humidity and corrosion
- Connection to the detection line via the DC1192 input/output module
 - for galvanic isolation and connection to the collective/SynoLINE600, interactive or AnalogPLUS/SynoLOOP fire detection system
- Connection to the detection line via the FDCIO223 transponder
 - for galvanic isolation and connection to the addressable FDnet/C-NET fire detection system
- Comprehensive final examination and quality control
- Environmentally safe material
 - halogen-free plastic material identifiable through embossed code
 - easy to uninstall and disassemble

Smoke detector DO1101A-Ex, collective wide spectrum Ex

- Uniform response behavior for different types of fire
- New, high performance optoelectronic sensor system
- High resistance to soiling and temperature fluctuation

• Function

- Penetrating smoke scatters the light of an infrared beam in the detector. If the light scatter exceeds a certain value, the detector transmits a danger signal to the control unit.
- Built-in alarm indicator provides on-site signaling of alarm.

Application

For the early warning of smoke-forming flaming fires and smoldering fires in explosion-hazard areas of zones 1 and 2.

Heat detectors DT1101A/02A-Ex

- Response behavior immune to deceptive phenomena with rapid and slow increases in temperature
- Intelligently designed differential characteristics
- Maximum temperature alarm activation with quality thermo sensor
- Reliable heat detector for demanding requirements:
 - DT1101A-Ex: Heat detector with wide application range (up to +50 °C)
 - DT1102A-Ex: Heat detector for high ambient temperatures (up to +70 °C)

Function

- The detector measures the ambient temperature with one NTC thermistor and the
 detector housing temperature with another NTC thermistor. In this way the detector
 can rapidly and differentially evaluate an increase in temperature independent of the
 starting temperature.
- Built-in alarm indicator provides on-site signaling of alarm.

Application

 For the monitoring of explosion-hazard areas of zones 1 and 2 where in the event of fire, a rapid increase in temperature can be expected, or other types of detector cannot be used due to operational reasons.

Design

- Mounting with detector base DB1101A
- Range of base accessories for installation even in critical locations
- Connection to the control unit via a two-wire line
- Vibration-proof mounting of detector in the base
- Anti-theft device if required
- One external alarm indicator can be connected
- DO1101A-Ex and DT1101A/02A-Ex fire detectors are designed to the explosion protection category 'Intrinsic safety' Ex i. The standards which cover this are EN 50014 (IEC 60079-0) and EN 50020 (IEC 60079-11).

Equipment installed in explosion-hazard areas must always comply with local national regulations.

The DC1192/FDCIO223 input/output module and the series-connected SB3 shunt Zener diode barrier are used as a galvanic isolation between explosion-hazard and non hazardous areas.

Further details can be found in the documents

- Fire protection in explosion-hazard areas, document no. 1204
- Input/output module DC1192, document no. 001571
- Transponder FDCIO223, document no. 009168
- Shunt Zener diode barrier SB3, document no. 001222

Maintenance

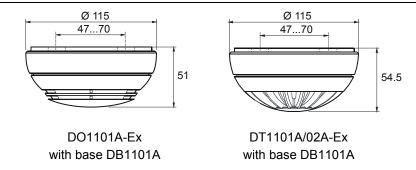

DO1101A-Ex, DT1101A/02A-Ex

 Detectors can be inserted and removed from their bases with a detector exchanger up to a height of 7 m.

DO1101A-Ex

By means of a periodic factory overhaul (cleaning and re-calibration), smoke detectors are given a new lease of life.

Compatibility	 By using the DC1192 input/output module and SB3 shunt Zener diode barrier it is 				
	compatible with fire detection system control units with collective/SynoLINE600,				
	interactive or AnalogPLUS/SynoLOOP signal evaluation.				
	- By using the FDCIO223 transponder and SB3 shunt Zener diode barrier it is com-				
	patible with fire detection system control units with FDnet/C-NET signal evalua-				
	tion.				
QS Standards	Fire protection industry certified quality assurance system according to				
	EN ISO 9001:2000.
