

#### 1. About this document

#### 1.1 Function

This operating instructions manual provides all the information you need for the mounting, set-up and commissioning to ensure the safe operation and disassembly of the safety-monitoring module. The operating instructions must be available in a legible condition and a complete version in the vicinity of the device.

#### 1.2 Target group: authorised qualified personnel

All operations described in this operating instructions manual must be carried out by trained specialist personnel, authorised by the plant operator only.

Please make sure that you have read and understood these operating instructions and that you know all applicable legislations regarding occupational safety and accident prevention prior to installation and putting the component into operation.

The machine builder must carefully select the harmonised standards to be complied with as well as other technical specifications for the selection, mounting and integration of the components.

#### 1.3 Explanation of the symbols used

Information, hint, note: This symbol is used for identifying useful additional information.

**Caution:** Failure to comply with this warning notice could lead to failures or malfunctions. **Warning:** Failure to comply with this warning notice could

lead to physical injury and/or damage to the machine.

#### 1.4 Appropriate use

The products described in these operating instructions are developed to execute safety-related functions as part of an entire plant or machine. It is the responsibility of the manufacturer of a machine or plant to ensure the correct functionality of the entire machinery or plant.

The safety-monitoring module must be exclusively used in accordance with the versions listed below or for the applications authorised by the manufacturer. Detailed information regarding the range of applications can be found in the chapter "Product description".

)
 -

To avoid EMC disturbances, the physical ambient and operational conditions at the place where the product is installed, must meet the provisions laid down in the paragraph "Electromagnetic Compatibility (EMC)" of DIN EN 60204-1.

#### 1.5 General safety instructions

The user must observe the safety instructions in this operating instructions manual, the country-specific installation standards as well as all prevailing safety regulations and accident prevention rules.

Further technical information can be found in the Schmersal catalogues or in the online catalogue on the Internet: www.schmersal.net.

The information contained in this operating instructions manual is provided without liability and is subject to technical modifications.

The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.

There are no residual risks, provided that the safety instructions as well as the instructions regarding mounting, commissioning, operation and maintenance are observed.

#### 1.6 Warning about misuse

In case of inadequate or improper use or manipulations of the safety-monitoring module, personal hazards or damage to machinery or plant components cannot be excluded. The relevant requirements of the standard EN 1088 must be observed.

#### 1.7 Exclusion of liability

We shall accept no liability for damages and malfunctions resulting from defective mounting or failure to comply with this operating instructions manual. The manufacturer shall accept no liability for damages resulting from the use of unauthorised spare parts or accessories.

For safety reasons, invasive work on the device as well as arbitrary repairs, conversions and modifications to the device are strictly forbidden; the manufacturer shall accept no liability for damages resulting from such invasive work, arbitrary repairs, conversions and/or modifications to the device.

The safety-monitoring module must only be used when the enclosure is closed, i.e. with the front cover fitted.

#### 2. Product description

#### 2.1 Ordering code

This operating instructions manual applies to the following types:

#### SRB 031MC

Drop-out delay preset in factory: 1,5 sec.; 1,1 sec.; 0,7 sec.; 0,4 sec.

Only if the information described in this operating instructions manual are realised correctly, the safety function and therefore the compliance with the Machinery Directive is maintained.

#### 2.2 Special versions

For special versions, which are not listed in the order code below 2.1, these specifications apply accordingly, provided that they correspond to the standard version.

#### 2.3 Destination and use

The safety-monitoring modules for integration in safety circuits are designed for fitting in control cabinets. They are used for the safe evaluation of the signals of positive break position switches or magnetic safety sensors for safety functions on sliding, hinged and removable safety guards as well as emergency stop control devices and AOPD's.

The safety function is defined as the delayed opening of the enabling circuits 17 - 18, 27 - 28 and 37 - 38 when the inputs S11 - S12 and/ or S21 - S22 are opened. The safety-relevant current paths with the outputs contacts 17 - 18, 27 - 28 and 37 - 38 meet the following requirements under observation of a PFH value assessment (also refer to chapter 2.5 "Safety classification"):

- control category 3 PL d to DIN EN ISO 13849-1
- corresponds to SIL 3 to DIN EN 61508-2
- SILCL 3 to DIN EN 62061

(meets the requirements of control category 3 to DIN EN 954-1)

To determine the Performance Level (PL) of the entire safety function (e.g. sensor, logic, actuator) to DIN EN ISO 13849-1, an analysis of all relevant components is required.

Standards:	IEC/EN 60204-1, EN 60947-5-1

Switching capacity of the auxiliary contacts: 45-46: 24 VDC / 2 A

### Operating instructions Safety-monitoring module

Protection of the safety contacts:	external (Ik = 1000 A)	
	to EN 60947-5-1	
Safety fu	se 10 A quick blow, 8 A slow blow	
Fuse rating for the auxiliary contacts::	external (lk = 1000 A)	
	to EN 60947-5-1	
Safety fue	se 2.5 A quick blow, 2 A slow blow	
Utilisation category to EN 60947-5-1:	AC-15: 230 VAC / 6 A	
	DC-13: 24 VDC / 6 A	
Dimensions H × W × D:	100 mm × 22.5 mm × 121 mm	
The data specified in this manual is applicable when the		
component is operated with rated operating voltage $U_e \pm 0\%$ .		

#### 2.5 Safety classification

Standards:	EN ISO 13849-1, IEC 61508, EN 60947-5-1
PL:	up to d
Control category:	up to 3
PFH value:	≤ 2.00 × 10 <sup>-7</sup> /h
SIL:	up to 2
Service life:	20 years

The PFH value of 2.00 × 10<sup>-7</sup>/h applies to the combinations of contact load (current through enabling contacts) and number of switching cycles ( $n_{op}/y$ ) mentioned in the table below.

At 365 operating days per year and a 24-hours operation, this results in the below-mentioned switching cycle times ( $t_{cycle}$ ) for the relay contacts. Diverging applications upon request.

Contact load	n <sub>op/y</sub>	t <sub>cycle</sub>
20 %	525,600	1.0 min
40 %	210,240	2.5 min
60 %	75,087	7.0 min
80 %	30,918	17.0 min
100 %	12,223	43.0 min

#### 3. Mounting

#### 3.1 General mounting instructions

Mounting: snaps onto standard DIN rails to EN 60715. Snap the bottom of the enclosure slightly tilted forwards in the DIN rail and push up until it latches in position.

#### 3.2 Dimensions

All measurements in mm. Device dimensions (H × W × D):  $100 \times 22.5 \times 121$  mm

#### 4. Electrical connection

#### 4.1 General information for electrical connection

As far as the electrical safety is concerned, the protection against unintentional contact of the connected and therefore electrically interconnected apparatus and the insulation of the feed cables must be designed for the highest voltage, which can occur in the device.

The electrical connection may only be carried out by authorised personnel in a de-energised condition.

Wiring examples: see appendix

#### 5. Operating principle and settings

#### 5.1 LED functions

- K1: Status channel 1
- K2: Status channel 2
- $U_B$ : Status operating voltage (LED is on, when the operating voltage on the terminals A1 A2 is ON)
- U<sub>i</sub>: Status internal operating voltage (LED is on, when the operating voltage on the terminals A1 - A2 is ON and the fuse has not been triggered).

#### 5.2 Description of the terminals

Voltages:	A1	+24 VDC/24 VAC
	A2	0 VDC/24 VAC
Inputs:	S11 - S12	Input channel 1 (+)
	S12 - S22	Input channel 2 (+)
	S21 - S22	Input channel 2 (-) (with cross-wire short
		detection)
Outputs:	17 - 18	First safety enabling circuit STOP 1
	27 - 18	Second safety enabling circuit STOP 1
	37 - 38	Third safety enabling circuit STOP 1
Start:	X1 - X2	Feedback circuit and external reset
	45 - 46	Auxiliary NC contact as signalling contact

#### 5.3 Notes

Signalling outputs must not be used in safety circuits.

Due to the operating principle of the electronic fuse, the customer must check that no hazard is caused by an unexpected restart in circuits without reset button (automatic reset).

- The safety enabling circuits 17 18 and 27 28 and 37 38 meet STOP category 1 to EN 60204-1.
- The drop-out delays of the safety enabling circuits can be reduced in case of a failure.

#### Opening the front cover (see Fig. 2)

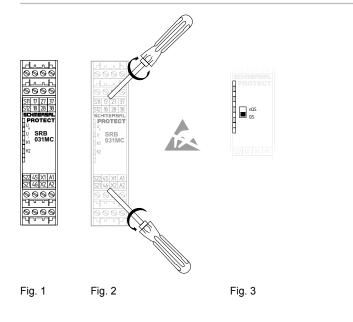

- To open the front cover, insert a slotted screwdriver in the top and bottom cover notch and gently lift it.
- When the front cover is open, the electrostatic discharge requirements
   must be respected and observed.
- After setting, the front cover must be fitted back in position.

#### Setting the switch (see Fig. 3)

- The cross-wire short monitoring function (factory setting) is programmed by means of the switch underneath the front cover of the safetymonitoring module.
- The switch must only be operated in de-energised condition by means of a finger or an insulated blunt tool.
- Pos. nQS (top): Not cross-wire short proof,
- suitable for 1-channel applications with outputs connected to potential in the control circuits.
- Pos. QS (bottom), Cross-wire short proof: suitable for 2-channel applications without outputs connected to potential in the control circuit s.

### Operating instructions Safety-monitoring module

#### 6. Set-up and maintenance

#### 6.1 Functional testing

The safety function of the safety-monitoring module must be tested. The following conditions must be previously checked and met:

- 1. Correct fixing.
- 2. Check the integrity of the cable entry and connections.
- 3. Check the safety-monitoring module's enclosure for damage.
- Check the electrical function of the connected sensors and their influence on the safety-monitoring module and the downstream actuators.

#### 6.2 Maintenance

- A regular visual inspection and functional test, including the following steps, is recommended:
- 1. Check the correct fixing of the safety-monitoring module.
- 2. Check the cable for damages.
- 3. Check electrical function.

The acco

The device has to be integrated into the periodic check-ups according to the Ordinance on Industrial Safety and Health, however at least 1x/year.

Damaged or defective components must be replaced.

#### 7. Disassembly and disposal

#### 7.1 Disassembly

The safety-monitoring module must be disassembled in a de-energised condition only. Push up the bottom of the enclosure and hang out slightly tilted forwards.

#### 7.2 Disposal

The safety-monitoring module must be disposed of in an appropriate manner in accordance with the national prescriptions and legislations.

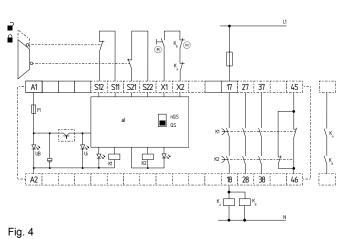

#### 8. Appendix

#### 8.1 Wiring examples

Dual-channel control, shown for a guard door monitor with two position switches where one has a positive break contact; with external reset button  $\ensuremath{\mathbb{R}}$  (Fig. 4)

• Relay outputs: Suitable for 2-channel control, for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.

- The control system recognises wire-breakage, earth faults and crosswire shorts in the monitoring circuit.
- 🐵 = Feedback circuit

a) Logic

#### 8.2 Start configuration

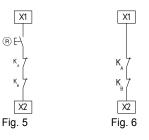

- External reset button (non-monitored start) (see Fig. 5)
- The external reset button is integrated in the feedback circuit in series.
  The safety-monitoring module is activated upon actuation of the reset button

#### Automatic start (see Fig. 6)

- The automatic start is programmed by connecting the feedback circuit to the terminals X1 X2. If the feedback circuit is not required, establish a bridge.
- Caution: Not admitted without additional measure due to the risk
   of gaining access by stepping behind!
- When the SRB 031MC safety-monitoring module is used with the operating mode "Automatic start", an automatic restart after a shutdown in case of emergency must be prevented by the upstream control to EN 60204-1 paragraph 9.2.5.4.2.

Due to the operating principle of the electronic fuse, the customer must check that no hazard is caused by an unexpected restart in circuits without reset button (automatic reset).

#### 8.3 Sensor configuration

Single-channel emergency stop circuit with command devices to DIN EN ISO 13850 (EN 418) and EN 60947-5-5 (Fig. 7)

- Wire breakage and earth leakage in the control circuits are detected.
- Category 1 PL c to DIN EN ISO 13849-1 possible.

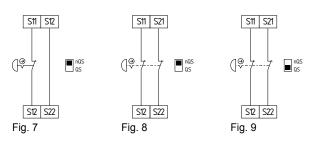

### Dual-channel emergency stop circuit with command devices to DIN EN ISO 13850 (EN 418) and EN 60947-5-5 (Fig. 8)

• Wire breakage and earth leakage in the control circuits are detected.

- Cross-wire shorts between the control circuits are not detected.
- Category 3 PL d to DIN EN ISO 13849-1 possible.

### Dual-channel emergency stop circuit with command devices to DIN EN ISO 13850 (EN 418) and EN 60947-5-5 (Fig. 9)

- Wire breakage and earth leakage in the control circuits are detected.
- Cross-wire shorts between the control circuits are detected.
- Category 3 PL d to DIN EN ISO 13849-1 possible.

## Single-channel guard door monitoring circuit with interlocking devices to EN 1088 (Fig. 10)

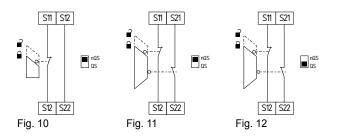

- At least one contact with positive break required.
- Wire breakage and earth leakage in the control circuits are detected.
- Category 1 PL c to DIN EN ISO 13849-1 possible.

## Dual-channel guard door monitoring circuit with interlocking device to EN 1088 (Fig. 11)

- · At least one contact with positive break required.
- Wire breakage and earth leakage in the control circuits are detected.
- · Cross-wire shorts between the monitoring circuits are not detected.
- Category 3 PL d to DIN EN ISO 13849-1 possible.

# Dual-channel guard door monitoring circuit with interlocking device to EN 1088 (Fig. 12)

- · At least one contact with positive break required.
- Wire breakage and earth leakage in the control circuits are detected.
- · Cross-wire shorts between the guard monitoring circuits are detected.
- Category 3 PL d to DIN EN ISO 13849-1 possible.

#### Dual-channel control of a safety-related electronic (microprocessor-based) safety guard with p-type transistor outputs e.g. AOPD's to EN IEC 61496 (see Fig. 13)

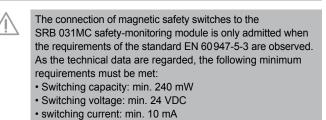

- Wire breakage and earth leakage in the control circuits are detected.
- The safety-monitoring module therefore is not equipped with a crosswire short detection here. The safety-monitoring module therefore is not equipped with a cross-wire short detection here.
- Category 3 PL d to DIN EN ISO 13849-1 possible.

# Dual-channel control of magnetic safety switches according to EN 60947-5-3 (see Fig. 14)

- Wire breakage and earth leakage in the control circuits are detected.
- Cross-wire shorts between the control circuits are not detected.
- Category 3 PL d to DIN EN ISO 13849-1 possible.

#### Dual-channel control of magnetic safety switches according to EN 60947-5-3 (see Fig. 15)

- Wire breakage and earth leakage in the control circuits are detected.
- Cross-wire shorts between the control circuits are detected.
- Control category 3 PL d to DIN EN ISO 13849-1 possible

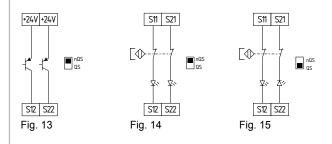

For example, the following safety sensors meet the requirements: • BNS 33-02z-2187, BNS 33-02zG-2187 • BNS 260-02z, BNS 260-02zG • BNS 260-02-01z, BNS 260-02-01zG

<u>/i</u>

i

When sensors with LED are wired in the control circuit (protective circuit), the following rated operating voltage must be observed and respected:
24 VDC with a max. tolerance of -5%/+20%
24 VAC with a max. tolerance of -5%/+10%
Otherwise availability problems could occur, especially in series-wired sensors, where a voltage drop in the control circuit is triggered by LED's for instance.

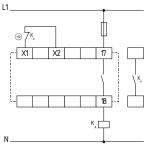

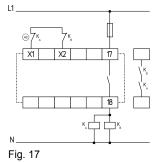

#### 8.4 Actuator configuration

- Single-channel control (see Fig. 16)
- Suitable for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- · If the feedback circuit
- is not required, establish a bridge.
- 🐵 = Feedback circuit

#### Dual-channel control with feedback circuit (Fig. 17)

- Suitable for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- · If the feedback circuit
- is not required, establish a bridge.
- 🐵 = Feedback circuit

9. Declaration of conformity

9.1 EC Declaration of conformity SCHMERSAL EC Declaration of conformity K.A. Schmersal GmbH & Co. KG Translation of the original Declaration of Conformity Industrielle Sicherheitsschaltsysteme Möddinghofe 30, 42279 Wuppertal Germany Internet: www.schmersal.com We hereby certify that the hereafter described safety components both in its basic design and construction conform to the applicable European Directives. SRB 031MC Name of the safety component: Safety-monitoring module for emergency Description of the safety component: stop circuits, guard door monitoring, magnetic safety switches and AOPD's 2006/42/EC - EC-Machinery Directive Relevant EC-Directives: 2004/108/EC - EMC-Directive Person authorized for the compilation Oliver Wacker of the technical documentation: Möddinghofe 30 42279 Wuppertal Notified body, which approved the full TÜV Rheinland Industrie Service GmbH quality assurance system, referred to Alboinstraße 56 in Appendix X, 2006/42/EC: 12103 Berlin ID n°: 0035 Place and date of issue: Wuppertal, May 02, 2013 Hund SRB031MC-C-EN Authorised signature **Philip Schmersal** Managing Director CE The currently valid declaration of conformity can be i downloaded from the internet at www.schmersal.net.
