setting the standard

## **Electromagnetic braking systems**

for lift applications

[www.intorq.com](http://www.intorq.com)

## We set the standards

The INTORQ brand stands for reliable brake solutions of the highest standard. Whether in cranes, wind turbines or industrial trucks – INTORQ products are used in the most diverse of applications. Rely on us to create the right solution for your drive – individually and reliably.

With its high number of variants, INTORQ's range of modular products is used in many motors and geared motors and has set standards worldwide. With the establishment of facilities in Shanghai, Atlanta and Pune we have also consistently expanded our international presence. So wherever you are in the world, our network of sales and service staff is always close at hand to support you.

### INTORQ at a glance

- Electromagnetic brakes and clutches
- Configurable standard solutions and custom-made solutions
- Development and production centred in Aerzen
- Fast delivery times worldwide thanks to production sites in Shanghai, Atlanta and Pune
- 51 million euros a year sales volume
- 800,000 units a year
- 13,000 square metres production area
- 250 employees
- Market leader with 63 sales partners in 49 countries

## Safety when you need it: Braking systems for lift applications

When using brakes in lift systems, safety is the top priority. We offer you specific solutions for various drive concepts in the field of lift technology.

Whether geared motors or direct drives – our braking systems are precisely matched to your specific requirements. The BFK464-S dual-circuit brake with multi-coil technology has, for example, been optimised for fitting to the new generation of compact direct drives. Also, the kidney-shaped brake callipers of the BFK466 with multi-coil technology have been ideally matched to the contours of axially-short motors and are capable of generating high levels of braking torque.

The most important properties of INTORQ braking systems for lift applications:

- Redundant braking systems
- Long-term reliable noise reduction
- Stable braking torque, even with friction surfaces at high temperatures

## Double spring-applied brake

### INTORQ BFK455-28

The powerful double spring-applied brake BFK455-28 is a redundant braking system intended for use in direct drives. Given its flat design this brake can be easily integrated in existing drive solutions.

#### Properties

- Braking torques of up to 2 x 2065 Nm
- Stable braking torque even with high-temperature contact surfaces
- Noise reduction with long-term stability
- Flat design
- Cost optimized excitation due to bridge/half-wave rectifier (necessary)
- Safe operation as brake circuits are monitored by microswitches
- Manual release optional
- Type tested

Size	$M_K$	$P_{20}$ Switch	Hold	$d^{H7/l}$ (bore diameter/length) Standard 1)	d1	d2	d8	d9 <sup>H9</sup>	d10	h	h2	h3	h11

# Dual circuit spring-applied brake

INTORQ BFK464-S

The dual circuit spring-applied brakes BFK464-S with multiple coil technology are powerful and ideally suited to use in lifts. The required redundancy is achieved by splitting the coil circuits and armature plate.

## Properties

- Braking torques of up to 2x900 Nm
- Stable braking torque even with high-temperature contact surfaces
- Noise reduction with long-term stability
- Each armature plate segment can be separately activated using multiple coil technology
- Cost optimized excitation due to bridge/half-wave rectifier (necessary)
- Safe operation as brake circuits are monitored by microswitches
- Manual release optional
- Type tested

## Spring-applied calliper brake

### INTORQ BFK466

Direct drives for modern lift technology require brakes with high braking torques, fast response times and low levels of operating noise. The BFK466 with multi-pole technology satisfies all of these requirements and can also be adapted perfectly to the contour of the motor.

#### Properties

- Spring-applied brake designed as a calliper
- Redundant by multiple arrangement
- High level of braking torque and large working air gap
- Zero residual torque release and quiet switching
- Optimum contour matching to the motor design
- Cost optimized excitation due to bridge/half-wave rectifier (necessary)
- Fast switching times thanks to low brake inductance
- Release or wear monitoring with microswitch
- Type tested

Calculation of rated torque

$$M_K = F_R \times r_0$$

Friction radius

$$r_0 = 2x (Ra^3 - Ri^3) / 3x (Ra^2 - Ri^2)$$

$$Ri = Ra - f$$

Size	Friction force [N]	Power P <sub>20</sub> Switch	Hold	a	b	d1	e	f	h1	h2	h3	h4	h8	l1	l2	Ra min.	Ra max.

■ Additional sizes and braking torques on request

■ P<sub>20</sub>: Coil power at 20 °C in W

■ F<sub>R</sub>: rated friction force in relation to a sliding speed of 2m/s

■ Dimensions in mm

■ More technical information can be found in the operating instructions

# Dual circuit spring-applied brake

## INTORQ BFK454

The dual circuit spring-applied brakes BFK454 satisfy the requirements of TRA 200 and EN-81 for lift systems.

The dual-circuit braking system is achieved by splitting the armature plate in two, the spring force used to generate the braking torque acts

- 80% directly on the front armature plate and
- 20% indirectly via the rear armature plate

### Properties

- Braking torques of up to 400 Nm
- Small volume
- Easy adjustment (reduction) of braking torque via the central adjustment ring
- Simple maintenance and monitoring of dual-circuit function
- No division of the rubbing surface

Size	M <sub>K</sub>	P <sub>20</sub>	b	d <sup>J7</sup> pre. 1)	d <sup>H7</sup> max. 2)	d1	d2	d6	d10	h1 max.	h3	h5	h6	l

■ M<sub>K</sub>: Brake rated torque in Nm in relation to Δn = 100 rpm

■ P<sub>20</sub>: Coil power at 20 °C in W

■ <sup>1)</sup> Pre-drilled, without keyway

■ <sup>2)</sup> Standard keyway according to DIN 6885/1-P9

\*Keyway according to DIN 6885/3-P9

■ Dimensions in mm

■ More technical information can be found in the operating instructions.

## Double spring-applied brake

### INTORQ BFK457

The switching noise is minimised by the special arrangement of damping elements and thereby achieves values of <50 dbA.

#### Properties

- Braking torques of up to 2x80 Nm
- Noise-reduced < 50 dbA (as option)
- Modular structure
- Simple mounting using stud bolts
- "Single-handed" manual release

Double spring-applied brakes BFK457 satisfy the high requirements of redundant braking systems in lift systems.

Size	M <sub>k</sub>	P <sub>20</sub>	b	d J7 pre. 1)	d H7 max. 2)	d1	d2	d3	h	h3	h5	h6	l2

# Double spring-applied brake

## INTORQ BFK458

The redundant braking system this achieves is structured in a modular fashion using the individual components of the BFK458.

### Properties

- Braking torques of up to 2x400 Nm
- Noise-reduced (optional)
- Modular structure
- Simple mounting using connection flange
- “Single-handed” manual release

Double spring-applied brakes of the BFK458 series are suited to lifts.

Size	$M_K$	$P_{20}$	d J7 pre. 1)	d H7 max. 2)	d1	d2	d6	h	h5	h6	l	l2
06	2x4	2x20	10	15	3xM4	72	87	84,6	107	56,3	18	8,7

## General information

INTORQ brakes are designed so that the stated torques are reliably attained after a short run-in operation.

Given the varying properties of the organic friction linings used and changing environmental conditions, there may however be deviations from the stated braking torques. Appropriate safety factors in the design must take this into account.

An increased breakaway torque may in particular be experienced in damp conditions and with changing temperatures after long downtimes.

The braking torque should be checked when using the brake on the customer's friction surfaces. If the brake is being used solely as a holding brake without any dynamic load, the friction lining must be reactivated regularly.

The INTORQ brand stands for reliable brake solutions of the highest standard. Whether in cranes, wind turbines or lift systems – INTORQ products are used in the most diverse of applications.

## Setting standards in the market, worldwide

We are available to our customers at all times and in all locations. Major customers and projects are supported directly by our Key Account Sales Team at our HQ in Aerzen (Germany) or by our locations in Shanghai (China), Atlanta (USA) and Pune (India).

In addition to this, we work with a global network of local trading partners and cooperate with Lenze's global sales organisation.

Please send service requests directly to your local sales partner or to our HQ in Aerzen, Germany:
