

## More Precision

## optoCONTROL // Optical precision micrometers

### Optical micrometers for high precision applications

### optoCONTROL

- High accuracy and measuring rate
- Resolution from  $0.1\mu$ m

2

- Measurement objects from 0.02mm
- Wear-free measurement for long service life
- Different models for numerous application areas

### Optical precision micrometers

Micrometers from Micro-Epsilon operate according to the ThruBeam principle. Here, the transmitter produces a parallel light curtain that is transmitted via a lens arrangement into the receiving unit. The beam is interrupted if there is an object in the light path. The shadowing generated by this object is recorded by the receiving optical system and output as a geometric value.

Several types of ThruBeam technology are used across the six different sensor models in the range so as to cover as wide a field of applications as possible.

Optical micrometers can be used for dimensional measurements in production, quality assurance and service tasks. Factors such as the diameter, gap, height, position and also the received amount of light or opacity can be measured.

### Wear-free and long service life

All optoCONTROL sensors function without a rotating mirror and so are completely wear-free. The parallel light curtain is produced by a special lense arrangement in the light source (transmitter). High quality components in the receiving optical system, e.g. filter and lenses, enable high accuracies to be achieved. Therefore, the optoCONTROL micrometers are ideally suited to applications in which high precision and complete reliability are required.

opto CONTROL - wear free thrubeam micrometers:

High speed real time consistent data enables true precision profile without distortion. The product range contains models with CCD and light quantity measurement for various applications.

## optoCONTRA

### Flexible in use

Micrometers are primarily used as part of the manufacturing process and quality control of a production line, measuring continuous material, as well as single parts. The relevant technologies used here, such as laser intensity measurements and CCD chip imaging, are suitable for a wide variety of applications.

The compact models in the optoCONTROL product family work for production line applications and for integration into machine tools and other production machinery. High measuring rates ensure a high, continuous production rate.

### Special application areas

The optoCONTROL 2500 and 2600 model ranges can be modified for customer specific applications, for example:

- Carry case version for service tasks
- Customised cable lengths, modified cable outlet
- Version with reduced light source to receiver gap
- Version with deflection mirror for installation in tight spaces
- Customer-specific software, e.g. measurement programs, statistics (only for ODC2600)
- Customer-specific linearity adjustment

Diameter of a pulley

Measuring system detects the X/Y position of the needle in an industrial sewing machine

Thickness measurement of flat plastic film and rubber strips

Bearing shell detection in automotive manufacturing

### optoCONTROL 1200/1201

- High quality glass lense optics
- Robust and compact design with integrated controller
- Limit switch with up to 60kHz switching frequency

Axial and radial design

### Measuring principle

The optoCONTROL 1200 is based on the principle of light quantity measurement. The light of a red laser diode is spread out by a lens to a parallel light curtain which is aimed at the receiving unit. In the receiving unit, the light is guided via various filters and lenses through a precision shutter to a light-sensitive detector. The amount of occurring light is provided by analogue electronics and output as an analogue signal.

### System design

optoCONTROL 1200 consists of a light source and a receiving unit. The complete controller electronics are integrated in the receiver housing. The light source and receiver can be installed at any distance up to 5 meters from each other. All models can be installed without additional brackets in both vertical and horizontal positions. The compact design of the housing and the 90° version also enable easy mounting of the miniature micrometers in tight installation spaces.

As well as the analogue output, an adjustable limit switch is also available. This can be operated both as NPN (bright switching) as well as in PNP logic (dark switching).

The target must be positioned inside the measuring window for the diameter measurement. Smallest diameter typ. >0.3mm. For gap measurement from 50 - 400 $\mu$ m there is an option using light quantity measurement.

### Measurement mode

### optoCONTROL 1200/90:

Version with 90° beam path for mounting in tight spaces. Optional mounting with ODC1202-L mounting rail as C-frame.

ODC1202-L mounting rail, available in different lengths

FSO = Full Scale Output The quoted data apply for a constant room temperature of 20°C after a warm-up period of 30min, in the range 10 ... 90% of the analogue output at a distance between light source and receiver of 0.5m.

Analogue offset < 0.05V

<sup>10</sup> Increasing the distance, the measurement of hot targets is possible without damaging the controller electronics
 <sup>20</sup> For gap measurements 50 - 400µm there is an controller option available: thrubeam operation with distances up to 700mm
 <sup>30</sup> Shadowing from ambient daylight increases the signal stability

### optoCONTROL 1200

### optoCONTROL 1201

- High resolution CCD array detector with integrated controller
- Sub-pixel evaluation
- Measuring distance selectable from 20 to 2000mm
- Integrated polarisation filter / interference filter
- 2 digital inputs

6

- 3 digital outputs (limit switch)
- ODC1202-Tool software included

### Measuring principle

The laser beam for the optoCONTROL 1202 laser micrometers is output from the optical transmitter as a parallel aimed laser beam. The laser line strikes a CCD array in the receiving optical system. The amount of light collected by each of these receiving elements during the integration time is read out separately as analogue voltage and stored as a digital value in a data field after analogue-todigital conversion.

If there is a non-transparent measurement object in the laser line, only the receiving elements of the lines outside the shadow zone of the measurement object are illuminated. As the spacing of the pixels of the CCD array is known, the size and position of the measurement object can be determined.

### System design

optoCONTROL consists of a light source and a receiving unit. The complete controller electronics are integrated in the receiver housing. The light source and receiver can be installed at any distance from each other. All models can be installed without additional brackets in both the vertical and horizontal positions.

### optoCONTROL 1220

- Visible laser line (red light 670nm)
- Working distance of up to 2,000mm
- Integrated interference filter
- CCD line detector with 2,048 pixels, 16,384 sub-pixels (8-fold)
- 2 digital inputs, 2 digital outputs
- Robust aluminium housing suitable for industrial use

### Measuring principle

The laser beam for the optoCONTROL 1220 laser micrometers is output from the optical transmitter as a parallel aimed laser beam. The laser line strikes a CCD array in the receiving optical system. The amount of light collected by each of these receiving elements during the integration time is read out separately as analogue voltage and stored as a digital value in a data field after analogue-todigital conversion.

If there is a non-transparent measurement object in the laser line, only the receiving elements of the lines outside the shadow zone of the measurement object are illuminated. As the spacing of the pixels of the CCD array is known, the size and position of the measurement object can be determined.

### System design

optoCONTROL 1220 series is specifically designed for measuring edges, diameters and gaps of up to 2,000mm. The laser micrometer consists of a light source and a receiving unit. The complete controller electronics are integrated in the receiver housing. The light source and receiver can be installed at any distance from each other. All models can be installed without additional brackets in both vertical and horizontal positions.

### Predefined measurement modes

(six individual programs can be selected)

### Measuring principle

optoCONTROL 2500 is a laser-based measuring system with integrated high resolution CCD camera. The Thru-Beam micrometer measures the dimension of an object or the position of an edge by using the shadowcasting principle. The data obtained with various, selectable measuring programs is output via analogue and digital interfaces. Thanks to the high measuring rate, the outstanding accuracy and excellent resolution, the laser micrometer is ideally suited to precision measurement and inspection tasks on moving products in production lines.

### System design

optoCONTROL 2500 consists of a sensor unit and a controller. The sensor unit comprises a laser light source (transmitter) and a CCD camera (receiver). A parallel light curtain is produced with the laser light source. The CCD array in the receiver measures the contour formed by shadow casting of the measurement object with high accuracy. The sensor unit is controlled and evaluated by an intelligent controller with graphical display for operation and display of the measured values.

Model		ODC 2500-35			
Measuring range		34mm

Measuring programs		diameter, gap, position / edge, segment,two-segment			

All specifications are measured at a constant temperature of 20 °C after a warm-up time of 30 minutes.

<sup>1)</sup> If distances increase, linearity and resolution may decline

<sup>2)</sup> Valid for distance of the target to receiver 20±5 mm; distance distance light source - receiver 150mm

<sup>3)</sup> Display resolution

### Customer specific versions

- Carry case version for service tasks
- Customised cable lengths, modified cable outlet
- Version with reduced light source to receiver gap
- Version with deflection mirror for installation in restricted, tight spaces
- OEM measuring programs adaption

- Position target anywhere in measurement field
- Output multiple measurement values simultaneously
- Triggering and synchronisation of multiple channels
- Many filtering modes and statistical calculations
- View video signal via web browser
- Display of light and dark edges
- Measures up to 8 segments simultaneously

### Compact multifunction micrometer with large working range

The optoCONTROL 2520 is a high performance, self contained laser micrometer with integrated controller and many programmable functions. It has a maximum measurement width of 46mm and the transmitter to receiver gap can be up to 2m (further can be achieved with reduction in measurement performance). Unlike current high accuracy micrometers, the optoCONTROL 2520 can have the target positioned at any point in the gap rather than just a small ,working position'. This gives the user much more flexibility in use. Small objects with 0.5mm diameter can be reliably detected.

RS422, Ethernet / EtherCAT interfaces are available directly from the sensor. For analogue outputs, a small DIN rail module is supplied. An intuitive web browser interface is used for viewing and recording measurement values, configuration of sensor parameters and visualisation of the sensor video signal.

### Measuring modes

The centre line as well as the position of the single edges can be output for every segment, gap or diameter.

All specifications are measured at a constant temperature of 20 °C, sensor in continuous operation. <sup>1)</sup> Distance light source - receiver 300mm, distance target - receiver 20mm and 50mm, mode: edge light/dark <sup>2)</sup> Measured at static noise for 3 min.

- Maximum resolution and accuracy
- Outstanding repeatability
- Measuring rate 2.3kHz for fast processes
- Insensitive to external light
- Measurement against glass and transparent plastics
- Six different measuring programs
- Measures up to 4 segments simultaneously (e.g. 4 x diameter)
- Free parameterisation and data acquisition tool

### Measuring principle

optoCONTROL 2600 is an optical measuring system with integrated high resolution CCD camera. Using a special lens arrangement, an LED light source produces a parallel light curtain (visible red light), which is imaged on the CCD camera via a telecentric lens. If an object to be measured is placed in the light curtain, the shadow it creates is detected by the CCD array. The measured data is output via analogue and digital interfaces. The system is insensitive to high external light conditions.

### System design

optoCONTROL 2600 consists of a sensor unit and a controller, which are attached to a mounting rail. The sensor unit comprises a light source with high power LED and a receiver with telecentric lens and CCD array. The sensor unit is controlled and evaluated by an intelligent controller with graphical display for operation and display of the measured value.

The adjustable light source enables precise measurement of most transparent objects. Significantly higher accuracies and repeatability of measured data is made possible due to the combination of LED with telecentric lens arrangement. The system is insensitive to dirt and moisture.

### Predefined measurement modes

<sup>3)</sup> Measured at static noise for 3 min.

### Optional versions

- Carry case version for service tasks
- Customised cable lengths, modified cable outlet
- Customer-specific software (measuring programs, statistics)
- System for measurement of grooved surfaces
- System with reduced distance between transmitter and receiver
- System with reduced and increased distance between transmitter and receiver

### 16 Accessories

### IF2008 - PCI interface card

### Particular benefits

- 4x digital signals and two encoders with basic printed circuit board
- Additional expansion board for a total of 6x digital signals, 2x encoder and 2x analogue signals and 8x I/O Signals
- FIFO data memory
- Synchronous data acquisition

Example: measurement of diameters with two optoCONTROL. The diameter to be measured can be increased using two opto-CONTROL. See CSP2008 universal controller.

### IF2008E - Expansion board

### Particular benefits

- Two digital signals, two analogue signals and 8 I/O signals
- Overall with IF2008: 6 digital signals,2 encoders and 2 analogue signals and8 I/O signals
- FIFO data memory
- Synchronous data acquisition

### **Diverse ODC tools**

Depending on the sensor, diverse tools for continuous measurement value recording and parameter set up are available free of charge.

### CSP2008 - Universal controller for up to six sensor signals

The controller CSP2008 has been designed to process 2 to 6 both optical and other sensors from Micro-Epsilon (6 digital or 4 analogue input signals max., 2x internal + 4x external via Ether-CAT modules from the company Beckhoff. EtherCAT is intended as external bus for connecting further sensors and I/O modules. The controller is equipped with a display offering multicolour backlighting which changes its colour in the case of exceeding the limit value while a signal is displayed.

### Features

- Real-time processing of input and output signals at up to 100kHz (user selectable)
- Unique user interface for the configuration of the controller via Ethernet on a PC or laptop.
  All user selectable functions of the controller and the measured values can be viewed,
- displayed and stored in real time via your own web browser without installing any 3rd part software
- Simple sensor connection with automatic sensor recognition, configuration of the sensor using buttons and display on controller or via web browser
- Modular system upgradable with additional I/O modules for customer-specific requirements. The internal communication between I/O components using EtherCAT connection (CSP 2008 acts as master)
- Extremely flexible and powerful functionality; function modules can be combined in many ways.
- Simple mounting using DIN rail TS 35

Universal controller with DIN rail TS 35 (dimensions not to scale)

### IF1032/ETH

The IF1032/ETH interface module now enables to run sensors equipped with analogue interfaces with the proven operating concept based on a web interface. The Ethernet interface permits to easily display the measured data on a PC. Moreover, sensors can be connected to an EtherCAT bus. The RS485 interface allows to connect new sensors that use the Micro-Epsilon specific RS485 protocol.

### Interfaces

- Ix RS485 (ME-internal protocol)
- = 2x analogue-in (14 bit, max. 4 ksps), voltage
- 1x analogue-in, (14 bit, max. 4 ksps), current
- Inputs for supply voltage
- Trigger input
- EtherCAT synchronisation output
- Output for sensor power supply

optoCONTRA

### Accessories optoCONTROL 2500/2600

MBC300	Assembly block for controller ODC2500/2600
IF2004/USB converter	4 channel RS422/USB converter
IF2001/USB converter	IF2001/USB converter RS422 to USB
RS-422/USB converter	Industrial converter for ODC2xxx sensors, RS-422/USB
SCD2500-3/RS422	Output cable RS422, 3m, open ends
IF2008-Y adaptation cable	Adaptation cable, Y-type, 100mm
SCD2500-3/IF2008	Interface cable
SCD2500-8/IF2008	Interface cable
Extension clamp	Extension clamp RS422 to CSP2008
toCONTROL 2520	
SCD2520-3	Digital output cable, 3m, RJ45/ Ethernet/EtherCAT
SCD2520/90-5	Digital output cable, 5m, RJ45/ Ethernet/EtherCAT
SCD2520/90-8	Digital output cable, 8m, RJ45/ Ethernet/EtherCAT
PC/SC2520/90-5	Supply-, interface- and signal cable, 5m
PC/SC2520-3	Supply-, interface- and signal cable, 3m
PC/SC2520-10	Supply-, interface- and signal cable, 10m
PC/SC2520-20	Supply-, interface- and signal cable, 20m
PC/SC2520-30	Supply-, interface- and signal cable, 30m
SCD2520-5 M12	Digital output cable Ethernet/EtherCAT, 5m
CE2520-1	Connecting cable light source-receiver, 1m
CE2520-2	Connecting cable light source-receiver, 2m
CE2520-5	Connecting cable light source-receiver, 5m
CE2520/90-1	Connecting cable light source-receiver, 1m
CE2520/90-2	Connecting cable light source-receiver, 2m
CE2520/90-5	Connecting cable light source-receiver, 5m
PC/SC2520-3/CSP	Interface and supply cable for CSP2008
PC/SC2520-3/IF2008	Interface and supply cable for IF2008
IF2004/USB converter	4 channel RS422/USB converter
RS-422/USB converter	Industrial converter for ODC2xxx sensors, RS-422/USB
IF2001/USB converter	Single channel RS422/USB converter
DD241PC(10)-U	Digital process display, 010V
DD241PC(11)-U	Digital process display, 2 limit switches, 010V
IF2008	PCI interface card RS422
IF2008E	Expansion board analogue / RS422 / PCI
IF2008-Y adaptation cable	Adaptation cable, Y-type, 100mm
CSP2008	Universal controller for displacement sensors
Extension clamp	Extension clamp RS422 to CSP2008
EK1122/CSP2008	2 port RJ45 EtherCAT junction
EK1100/CSP2008	Bus terminal
	MBC300        IF2004/USB converter        IF2001/USB converter        SCD2500-3/RS422        IF2008-Y adaptation cable        SCD2500-3/IF2008        SCD2500-8/IF2008        Extension clamp        toCONTROL 2520        SCD2520/90-5        SCD2520/90-5        SCD2520/90-8        PC/SC2520-30        SCD2520-3        PC/SC2520-30        SCD2520-5        CE2520-10        PC/SC2520-30        SCD2520-5        CE2520-1        CE2520-1        CE2520-2        CE2520-3        SCD2520-30        SCD2520-5        CE2520-10        PC/SC2520-30        SCD2520-5        CE2520-10        PC/SC2520-30        SCD2520-5        CE2520/90-1        CE2520/90-2        CE2520/90-2        CE2520/90-3        PC/SC2520-3/IF2008        IF2004/USB converter        IF2001/USB converter        IF2008        IF2008        IF2008        IF2008

### Accessories power supplies

2420065	PS2030	Wall power supply 24V/24W/ 1A; 2m-PVC; clamp		
2420062	PS2020	Power supply for DIN rail mounting 24VDC / 2.5A		
2420042	PS2011	Power supply for laboratory use 230VAC/ 24VDC / 5.2A		

Further cable lengths on request.

Class 1 Laser Product IEC 60825-1: 2008-05 optoCONTROL 2520 use a semiconductor class 1M laser with a wavelength of 670nm. The maximum optical output power is <=2mW. This laser class does not require any additional protection equipment. Be careful with the dazzling effect related to optical instruments.

optoCONTROL 12xx and 2500 use a semiconductor class 1 laser with a wavelength of 670nm. The maximum optical output power is  $\leq$  0.39 mW. This laser class does not require any additional protection equipment.

### High performance sensors made by Micro-Epsilon

Sensors and systems for displacement and position

Optical micrometers, fibre optic sensors and fibre optics

Sensors and measurement devices for non-contact temperature measurement

Colour recognition sensors, LED analyzers and colour online spectrometer

2D/3D profile sensors (laser scanner)

Measurement and inspection systems
