

MINITIMER Light Timing Switch IK 8814 / OA 8824

- According to EN 60 669-1, EN 60 669-2-1
- Reswitching possible
- Operating times between 0.5 ... 60 min., as required
- IK 8814 with permanent light switch and LED indicator for contact position
- IK 8814 for installation in rows, width 17.5 mm
OA 8824 for installation in flush-mounted boxes

Applications

- Automatic staircase light switch
- Delayed-release timing relay
- Time-lag switch

Function

IK 8814 and OA 8824 - that are controlled by a static timing element - can be used as automatic staircase light switches, as delayed-release timing relays or as time-lag switches. While IK 8814 is designed to be mounted on a top hat rail, OA 8824 is suitable for installation in flush-mounted boxes (diameter 60 mm, depth 40 mm).

The operating time can be set using a screwdriver.

When the unit is being used as an automatic staircase light switch, it is activated via a 3- or 4-wire connection by pressing a pushbutton (only a 4-wire connection in the case of OA 8824). The pushbutton and the equipment concerned have to be connected to the same phase in this context.

When a pushbutton is pressed, the contact moves to its active position and the set time starts. The active position is indicated by an LED on IK 8814. The light timing switch can be reswitched at any time during the operating period by pressing the pushbutton again. If this is done, the time delay starts again from the beginning without any interruption (in the case of 4-wire circuits).

IK 8814 can be switched to permanent lighting by moving a slide switch that is located on the front of the unit.

If they are wired appropriately (see the connection diagrams), IK 8814 and OA 8824 can also be used as a time-lag relay for a second consumer (e.g. ventilator). When the first consumer (e.g. a light) is switched on, the contacts move to their active position, as a result of which the second consumer is switched on as well.

When the first consumer has been switched off, the contact remains in its active position for the duration of the set time delay.

LED: on, when the output relay is activated

Notes

Switch connection boxes (60 cm deep) are suitable for installing OA 8824 can be purchased, for example, from Messrs Kaiser, D - 5885 Schalksmühle / Germany (order no. 1055-02). OA 8824 is also available on request complete with installation pushbutton and installation frame for switch connection boxes (diameter 60 mm, depth 40 mm).
