Teach-in method

Teach	Operating level 1	Operating level 2
Standard Teach	**Teach on object:** With this teach event, the object is located in front of the sensor. The switching threshold is set by the teach so that the object is detected with tight signal reserve **R**. Thus, the object is detected even if the distance increases by the value **r** with respect to the distance during the teach.	**Teach on background:** This teach is only suitable for applications with a fixed background. The teach is performed directly on the background without an object. The switching threshold is set to a value that is just above the background signal (signal reserve **R**). Thus, objects can be detected up to a distance of **r** in front of the background.

Operation via teach button

Teach in operating level 1

- Press teach button until the **yellow** LED flashes.
- Release teach button.
- Ready.

2 ... 7 s

LED **yellow**
flashes at 3 Hz
Teach in operating level 2

- Press teach button until **green** and **yellow** LEDs flash **alternately**.
- Release teach button.
- Ready.

7 ... 12 s

flashes **yellow** and **green alternately**
with 3 Hz
Adjusting the switching behavior of the switching output – light/dark switching

This function permits inversion of the sensors' switching logic.

- Press teach button until the **green** LED flashes.
- Release teach button.
- The LED then displays the changed switching logic **for 2 s**:

YELLOW	= switching outputs **light switching**
Continuous light	(in the case of complementary sensors, Q1 (pin 4) light switching, Q2 (pin 2) dark switching), this means output active when object is detected.
GREEN	= switching outputs **dark switching**
Flashing light	(in the case of complementary sensors, Q1 (pin 4) dark switching, Q2 (pin 2) light switching), this means output inactive when object is detected.

- Ready.

> 12 s

LED **green**
flashes at 3 Hz

or
**2 s YELLOW =

flashes **GREEN for 2 s =
