Thru-beam sensor

M12/MV12-F1/76b/82b/124/128

Fixed cable

M12/MV12-F1/76b/82b/124/128 Thru-beam sensor

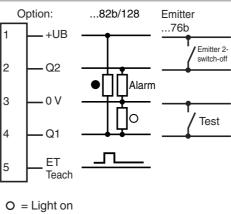

with 5-pin M12 connector, 90° adjustable position

Features

- Series of sensors in a widely used ٠ standard housing
- TEACH-IN switch for setting the cont-• rast detection levels
- Automatic adjustment in case of soi-• ling in contrast detection mode
- High level of stability thanks to the me-٠ tal housing frame
- Resistant against noise: reliable ope-• ration under all conditions

Notes

Alignment

In switching position "N" senders and recipients align to: Yellow LED lights up constantly, red LED is off.

TEACH-IN

- Switch position "N" (standard operation):
- LEDs are lit when the light beam is unobstructed, they flash when the value falls short of the function reserve and switch off when the beam is interrupted.
- Switch position "T" (Teach-in mode): After 1 s, the LED flashes slowly (approx. 1.5 Hz). The sensor is now ready to be set for a specific
- contrast detection value either via the mechanical switch (pos. I, II or III) or an external signal.
- Switch positions "I", "II" and "III" (contrast detection mode) Contrast recognition values: I for 15 %, II for 25 %, III for 40 %
- 1. LED permanently lit: light path unobstructed 2. LED off: element to be sensed detected
- 3. LED flashes rapidly: detection failure, excessive soiling, function reserve too low.

• Ext. TEACH-IN input

- The desired contrast recognition capability can be adjusted by applying of a logic "high" pulse with a certain pulse length when the switch is in position T. 50 ms (30 ms ... 100 ms) 150 ms (100 ms ... 200 ms) 1:
