

- Connector for aluminium profile rails WCS3-PS1

Connectors are necessary for joining the aluminium profile rails. Each connector (WCS3-MC1) consists of a 170 mm long aluminium extruded section and two selftapping screws M3 x 4.5 mm. The connector is pushed into the bottom grooves in the two profile rails to be joined. Then the screws are screwed into the holes (1.8 mm in diameter). The tips of the screws are pressed into the aluminium profile and hold the connector down.
