# **Model Number**

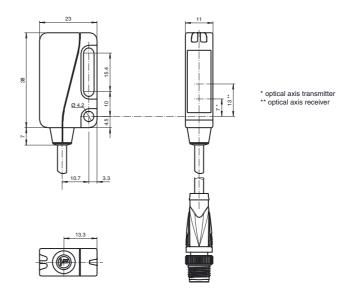

## ML9-8-H-50/25/65b/103/115a/123

Background suppression sensor 200 mm fixed cable with 4-pin, M8x1 connector

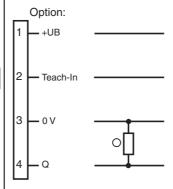

#### **Features**

- Ultra bright LEDs for power on and switching state
- Flashing power on LED in case of short-circuit
- TEACH-IN
- Not sensitive to ambient light, even with switched energy saving lamps
- Protected against mutual interference (no cross-talk)
- Protection class II

## **Dimensions**

# **Electrical connection**

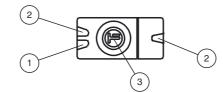

- O = Light on
- = Dark on

# **Pinout**

# Indicators/operating means

	1	LED green
	2	LED yellow
	3	Teach-In

# **Setting Instructions**

## **Setting Instructions for Devices with TEACH-IN**

After the operating voltage is applied, the green LED lights up. The sensor is automatically in max. detection range status (state as supplied) or in the status of the most recent TEACH-IN setting.

Mount a suitable reflector opposite the photoelectric sensor.

#### **TEACH-IN** with the **TEACH** key

- Remove the detected object from the light beam.
- Press the TEACH key. The green LED indicator light goes off briefly to confirm this.
- Hold down the TEACH key until the yellow and green indicator LEDs flash synchronously (about 2.5 Hz). Then release the Teach key
- During internal setup of the sensor, the green and yellow indicator LEDs flash alternately (about 2.5 Hz).
- TEACH-IN successful: Only the green indicator LEDs is lit. The device is ready for operation.
- TEACH-IN not successful: The green and yellow indicator LEDs flash quickly and alternately (about 8 Hz) for about 5 seconds. Then the sensor switches to the status with maximum detection range. After that, repeat the TEACH-IN procedure, starting with step 1.

#### **TEACH-IN via external TEACH-IN input (ET)**

TEACH-IN can also be initiated via the external TEACH-IN input (ET)

To do this, the ET must be open (or at 0 V) for at least 50 ms, after which +UB is applied for a duration of 50 to 80 ms.
