Model Number

**PROSCAN-T-3529**

Active infrared scanner

with fixed cable

Features

- Version with E1 approval
- Fan-shaped detection field with up to 12 beams
- Adjustable detection fields for different door widths
- Automatic drift compensation

Product information

The compact ProScan energetic light scanner operates using an integrated source of infrared light and creates a fan-shaped detection field consisting of a maximum of 12 independent light beams. Since the beam intensifies toward the center of the fan, the area around the closing edges in particular is monitored virtually seamlessly. The sensors are self-programming and automatically adapt to any environment, learn the environment, and even automatically adapt to subsequent changes. Other notable features include the high level of sensitivity, ambient light immunity and compensation of long-term drift. This function guarantees reliable long-term use, even in dirty, rainy or snowy conditions.

Technical data

General specifications		
Detection field		total field: 2300 mm x 80 mm left/right field: 1150 mm x 80 mm center field: 1000 mm x 80 mm ‖ (installation height: 2 m)
Light source		12 x IRED
Light type		modulated infrared light
Teach-in time		approx. 4 s
Open time		3 s /10 s, programmable
Functional safety related parameters		
$MTTF_d$		630 a
Mission Time (T_M)		20 a
Diagnostic Coverage (DC)		60 %
Indicators/operating means		
Function indicator		LED red: on for object detection, flashes during teaching phase
Control elements		Programmble switch for switching type, open time, detection field
Factory setting		Right-field sensing with 6 beams
Electrical specifications		
Operating voltage	U_B	12 ... 38 V DC
Ripple		10 %
No-load supply current	I_0	100 mA
Output		
Switching type		Output active / inactive programmable
Signal output		1 PNP, short-circuit protected, reverse polarity protected, open collector
Switching voltage		38 V DC
Switching current		200 mA
Response time		< 50 ms
De-energized delay	t_{off}	200 ms
Ambient conditions		
Ambient temperature		-20 ... 60 °C (-4 ... 140 °F)
Storage temperature		-40 ... 70 °C (-40 ... 158 °F)
Mechanical specifications		
Mounting height		1000 ... 2500 mm
Degree of protection		IP52
Connection		AMP connector 6-pin , 2 m fixed cable
Material		
Housing		ABS
Optical face		PMMA
Mass		approx. 100 g
Compliance with standards and directives		
Directive conformity		
EMC Directive 2004/108/EC		EN 60947-5-2:2007
Standard conformity		
Product standard		EN 60947-5-2:2007 IEC 60947-5-2:2007
Standards		EN 50155:2007 Chapter 12.2.3 / 12.2.5 / 12.2.7 / 12.2.8 / 12.2.11 / 12.2.14 Details see test report

Approvals and certificates	
UN/ECE Regulation No. 10 (E1)	Type-approval number: 046982

Typical applications

- Closing edge protection on automatic sliding doors, for example sliding doors in shopping centers, public buildings and office buildings
- Version T with e1 approval: Closing edge protection on automatic doors on public transport vehicles, such as buses and trains
- Threshold monitoring on revolving doors

Functional principle

The ProScan is a 12-beam energetic light scanner based on the principles of active infrared. The beams, which are switched independently, enable the sensor to fan out across an extremely wide and narrow detection field in the area of the door.

The clearly defined, fan-shaped detection field on the ProScan can be set manually in four areas: half fan to the right, half fan to the left, central fan and full detection field.

Immediately after being switched on for the first time, the ProScan programs the reflected pattern of the detected background as the reference signal. During this process, the ProScan automatically adapts to the relevant installation and assembly environment. Since each of the individual light beams on the ProScan independently programs its specific reception level, there is no need to manually configure complex sensitivity settings.

Once the programming phase is complete, the light reflected from each of the 12 light beams is evaluated. Each time there is a difference between the reflected value of an individual light beam and the reference signal, a switching process is initiated.

"Open Time" Function

The ProScan is a self-programming device, and automatically adjusts to changes in its environment. If the ProScan detects a stationary object

that does not correspond to the programmed reference signal (for example, a suitcase), ProScan interprets this as a permanent change in the environment and initiates a new self teach-in process after a preset time (referred to as "Open Time") has elapsed. Open Time can be adjusted to meet customer application requirements.

"Suitcase" Function
After a background has been changed, the ProScan "Suitcase" function allows the reference to be adjusted back to the original background. Once a self-taught object, such as a suitcase, is removed from the detection field again, ProScan returns to the original reference. A new learning process is not required.

Compensating for long-term drifts
The ProScan is able to compensate for long-term drifts. Using this function, changes to the ground reflectance (for example, caused by rain or snow), as well as temperature fluctuations and dirt on the optical surface or ground are automatically compensated for.

Test input (optional)
Using the integrated test input, the overall function of the ProScan can be reliably checked by testing all 12 light beams simultaneously.

Programming options

The programming switch can be accessed by gently pulling the lens assembly away from the housing. A small flat-head screwdriver can be used to gently push the cover off by the slots located at the sides of the cover.

Each switch is activated when the pin is connected to the hook (ON); if the pin is not connected to the hook, the switch is deactivated (OFF).

The programming options are listed in the following table.

Switches	Output active during detection	Output inactive during detection	Open Time 10 seconds	Open Time PROSCAN 3 min PROSCAN-T 3 seconds
1	ON	OFF		
2			ON	OFF

Detecting field at installation height of 2000 mm			
Switches	**2300 mm x 80 mm Full field**	**1150 mm x 80 mm Left field**	**1150 mm x 80 mm Right field**	**1000 mm x 80 mm Center field**
3	OFF	OFF	ON	ON
4	OFF	ON	OFF	ON
