# **Curves/Diagrams**

# **Curves/Diagrams**

# **Note**

The E18/EV18-LAS... optical barrier is equipped with an automatic adjustment of the limit value with non-volatile memory to compensate for contamination by dust particles in the optical path. The adjustment of the limit value for the switching point extends to < 20% of the signal level that is present for the unattenuated optical path. The control constant is < 3 sec for a reduction in intensity of 2%, or < 0.6 s (typically 0.2 sec) for an increase in intensity of 2%.
