

Model Number

BB10-P/25/33/76b/103/115-10m

Thru-beam sensor with fixed cable

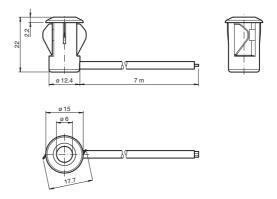

Features

- Single-beam miniature photoelectric sensor, ideal for installing in frames or contours
- Integrated circuit
- Plug-in style housing for 13 mm hole
- Narrow opening angle, suitable for mounting in pairs
- Light on version
- Version with test input

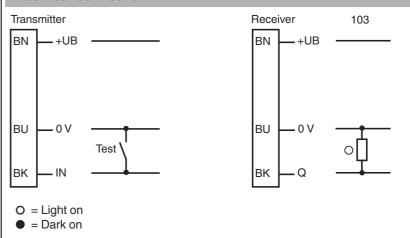

Product information

There is no simpler way of installing a sensor: drill the hole, clip in the sensor and you're done. What's more, the BB10 plug-in sensors for doors and turnstiles offer top performance at an extremely attractive price. The switching mechanism is integrated in the compact, self-contained and temperature-stable housing, making the BB10 suitable even for extremely cold regions with temperatures as low as -40°C.

Operating principle

The thru-beam sensor requires two devices for operation; a light source and a light receiver. The light source and receiver must be optically aligned with one another in a single line. The infrared light emitted from the source is recorded by the receiver and evaluated.

The sensor detects both people and objects for as long as an object interrupts the detection beam, regardless of movement and surface structure.

Function

The Series BB10 thru-beam sensor requires a pair of devices for operation, comprising a light transmitter and a light receiver. The transmitter and receiver must be arranged in optical alignment with each other. The infrared light from the transmitter is detected by the receiver and evaluated.

Static detection:

The thru-beam sensor detects persons and objects independently of movement and surface structure for as long as the object breaks the detection beam.

| | | Electronic output |
|---------------------|-----------------------|-------------------|
| Light detection /25 | Person in the beam | Inactive |
| | No person in the beam | Active |
| Dark detection /59 | Person in the beam | Active |
| | No person in the beam | Inactive |

Installation:

Date of issue: 2014-06-23 251447_eng.xml

Release date: 2014-06-23 14:03

Thanks to its small dimensions, the light beam can be fitted in a U-profile or behind a face panel.

| | Hole diameter [mm] | |
|-------------------------|--------------------|------|
| Sheet thickness [mm] | 13 | 13.5 |
| 1 | ОК | X |
| 2 | OK | OK |
| 3 | OK | OK |

X = Mounting not possible

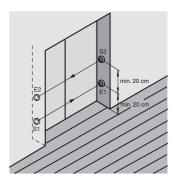

OK = Mounting possible

Installation of twin-beam arrangement:

A twin-beam version requires 2 transmitters and receivers.

When using thru-beam sensors with the same transmission frequency:

Ensure that the minimum beam distance is 20 cm and that the light source and receiver are arranged in a cross formation.
