- Inputs and output Ex ia
- Installation in Zone 2, Zone 22, Div. 2, or safe area
- Positive or negative logic selectable
- Simulation mode for service operations (forcing)
- Line fault detection (LFD)
- Permanently self-monitoring
- Output with watchdog
- Module can be exchanged under voltage

**Function**

The digital output features 1 output with 2 feedback inputs. The device can be used to switch solenoids, sounders, or indicators (without line fault detection) in the field. Furthermore, the device accepts digital input signals of NAMUR sensors or mechanical contacts from the field. Open and short circuit line faults are detected. The intrinsically safe inputs and the output are galvanically isolated from the bus and the power supply.
