### **Function**

The Remote I/O Com Unit or Gateway links intrinsically safe and safe inputs and outputs from sensors and actuators to the PROFIBUS.

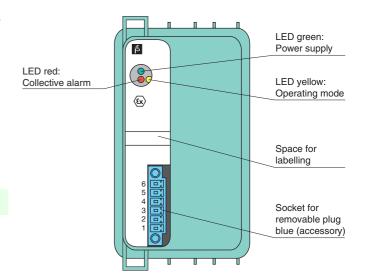

It makes use of all regular I/O modules and thus transports signals to and from NAMUR sensors, mechanical contacts, high power IS solenoids, power relays, sounders, and alarms LEDs.

The Com Unit supports online configuration, redundancy, and HART. It is well integrated into all renowned DCS and PLC systems.

Configuration in Run (CiR) enables configuration of a running system without a PROFIBUS restart, even in non-redundant systems.
