SIEMENS

- Operating voltage AC/DC 24 V,
- 2-point positioning signal or PDM (pulse-duration modulation)
- Operating voltage AC 230 V,
 - 2-point positioning signal Positioning signal DC 0…10 V
- Operating voltage AC 24 V, Positioning signal
 Positioning force 100 N, (Variants for FHD with 90 N)
- Standard version with connecting cable (1 m / 0.8 m)
- Actuators without connecting cable used together with:
 - Connecting cable for up to 15 meters, halogen-free also available
 - Connecting cable with LED operating indication
 - Connecting cable with auxiliary switch or DC 0...10 V module
- Variants supporting synchronous operation of multiple actuators switched in parallel
- 270° visible position indication
- Mounting using a sliding sleeve lock (bayonet)
- Adaptor for mounting on third-party valves
- Dismantling protection (optional)
- Automatic adaption of close dimension
- IP54
- Robust, maintenance-free, noise-free

Third-party valves, connection M30 x 1.5, without adapter

Radiator valves

• Heimeier

• Watts (Cazzaniga)

• Oventrop M30 x 1.5 (as of 2001)

Honeywell-Braukmann

• MGN

Valves from additional manufacturers upon request

Additional radiator valves with adapters AV.. see "Accessories/Adapter" page 5

k_{vs} = Nominal flow value for cold water (5...30 °C) through a fully opened valve (H₁₀₀), at a differential pressure of 100 kPa (1 bar)

 \dot{V} = Volumetric flow at 0.5 mm stroke

Technical notes

NO, NC valves	 NO valves Valve is opened without actuator (Normally Open) The valve stem is fully extended Typical examples: Radiator valves (VDN, VEN, VUN), sma valves (VD1CLC), zone valves (VI46) and Combi valves (VP). 			
	 NC valves Valve is closed without actuator (Normally closed) The valve stem is fully extended Example: Small valve VP47 			
	Most third-party valves are NO valves.			
Valve and actuator combination	 NO function STA actuator stem is extended when de-energized. NC valve required. 			
	NC functionSTA actuator stem is extended when de-energized.NO valve required.			
Note NO function	The valve is closed in a de-energized state for most valve applications featuring thermal actuators			
(Normally Open)	Actuators with the opposite control action, are used when the reverse function is required: The valve is open in a de-energized state.			
	The following table displays the appropriate combinations.			

Note

Response at de-

energized actuator

		De-energized actuator		
Valve	Туре	STA	STP	
Radiator valves	VDN, VEN, VUN	Closed	Open ¹⁾²⁾	
Small valves	VP47	$A \leftrightarrow AB \text{ open}^{(1)(2)}$	$A \leftrightarrow AB$ closed	
Siliali valves	VD1CLC	Closed	Open ¹⁾²⁾	
Zone valves	VI46		AB \leftrightarrow A open ^{1) 2)}	
Combi valves	VPD, VPE VPP46, VPI46,	Closed	Open ¹⁾²⁾	

 ¹⁾ Controller must support NO valve actuator combinations.
 ²⁾ Combination not recommended as actuator life decreases significantly due to continuous voltage applied to the drive in summer. Makes no sense in terms of energy.

Technical and mechanical design

Actuator operation	The electrothermal actuators STA and STP are noise-free and maintenance- free. When the control signal is applied to the actuator, the temperature of the heating element rises, which causes the solid expansion medium to expand. It transfers its stroke directly to the installed valve. The valve starts to open after preheating for approx. 3 min if the heating element is switched on in a cold state (room temperature), and achieves the maximum stroke after another approx. 2.5 min (230 V) or 3 min (24 V). At power-off, the expansion element cools down and the valve will be closed by the spring. This has the following effect for the actuator types below:
STA73, STA23 (NC) 2-position, PDM	The actuator stem retracts and the radiator valve is opened by the own spring. The actuator stem extends when de-energized and the radiator valve is closed.
STP73, STP23 (NO) 2-position, PDM	The actuator stem extends and the small valve, VP47, is opened. The actuator stem retracts when de-energized and the small valve is closed by the own spring.
STA63 STA73/00 with DC 010 V module	The actuator stem retracts and the radiator valve is opened by the spring. The position of the stem is proportional to the DC 010 V positioning signal. The actuator stem extends when de-energized and the radiator valve is closed. The actuator deploys to the 50% stroke position if the positioning signal is lost when applying operating voltage. DC 010 V actuators support various operation modes, see also under DIP-Switch settings
STP63 STP73/00 with DC 010 V module	The actuator stem extends and the small valve, VP47, is opened. The position of the stem is proportional to the DC 010 V positioning signal. The actuator stem retracts when de-energized and the small valve is closed by the own spring. The actuator deploys to the 50% stroke position if the positioning signal is lost when applying operating voltage. DC 010 V actuators support various operation modes, see also under DIP-Switch settings

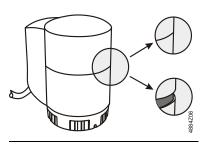

STP63../STP63.. DIP-switch settings

The movement and actual position of the actuator is indicated by the gray interior

Position indication on the actuator

STA..

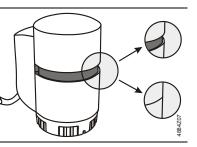

part.

De-energized actuator

- The actuator's stem is extended
- The ¹⁾valve is closed.

Actuator > 3 minutes with power

- The valve stem is retracted.
- The ¹⁾valve is opened.

De-energized actuator

- The actuator's stem is retracted.
- The ²⁾valve is closed.

Actuator > 3 minutes with power

• The actuator's stem is extended

• The ²⁾valve is opened.

 $^{1)}$ With regard to radiator valves, VPP46../VPl46.. and VVl46../VXl46 . $^{2)}$ With regard to V..P47..

Automatic adaption of
close - dimensionLocking the sliding sleeve, bayonet-ring, triggers the mechanical adaption of the
close- dimension. This affects a pre-tensioning for NC types (STA..) on the valve
stem resulting in a sealed valve. For NO types (STP..), the actuator stem will be
positioned above the valve spindle without pre-tension.

Lies in the range between 8.5...13.5 mm¹⁾

Adaption of closedimension for STA.. actuators (NC)

Adaption of close dimension for STP.. Actuators (NO) Lies in the range between 12.5...17.5 mm¹⁾

¹⁾ when used with the supplied standard sliding sleeve

8 / 17

STP..

Adaption of closedimension with higher sliding sleeve (bayonetnut) AV301, AV302 und AV303, bayonet-nut, AV.. (accessories) A higher sliding sleeve, bayonet nut, is used in the following cases:

- a. If the diameter of the actuator's sliding sleeve, bayonet-ring (42,5 mm) prevents assembly (e.g. angle valves, valves with measurement ports) and
- b. To adapt to the desired thread size for third-party manufacturers (M28 x 1.5 or M30 x 1)

It must be used with insert A (black) if a higher sliding sleeve adapter (bayonet) is used to maintain the close-dimension range.

Options

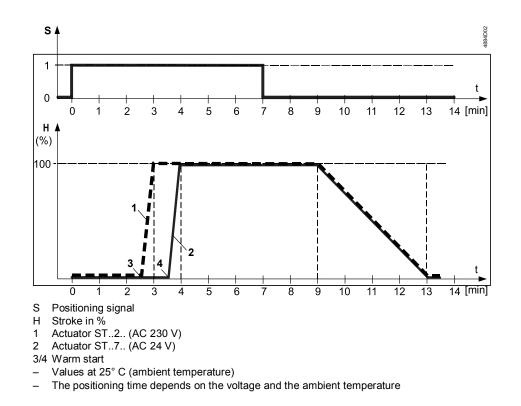

- To achieve the close-dimension range, reduced by 5 mm, the sliding sleeve adapter must be used together with insert B (white).
- To achieve the close-dimension range, increased by 5 mm, the sliding sleeve adapter must be used without insert A or B.

Expansion to the close-dimension is required to adapt to third-party valves that do not operate within the standard close dimension range.

	Standard	Higher bayonet adapter				
	bayonet-nut	AV301 → M30 x 1,5				
		AV302 → M28 x 1,5				
		AV303 → M30 x 1				
	No insert	Insert-A (black)	Insert-B (white)	No insert		
STA	8.5 13.5	8.5 13.5	3.5 8.5	13.5 18.5		
STP	12.5 17.5	12.5 17.5	7.5 10.5	17.5 22.5		

Close-dimension range with the different adapters:

Positioning times, Opening/closing

∆ Warning

Some controllers drive the valve actuators with pulsed signals. This increases the response time. For optimal control, the ambient temperature of the actuator must be $< 40^{\circ}$ C.

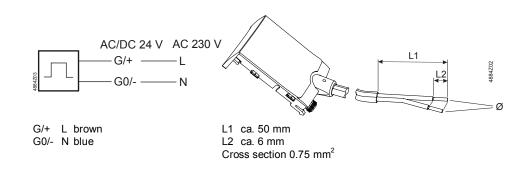

Pulse-duration modulation

Accessories

Separate connecting
cableThe actuators STA../00 and STP../00 are supplied without a connecting cable.They can be assembled as per the table "Accessories/connecting cables" on
page 4. The product also includes halogen-free cable.

ASY23L..

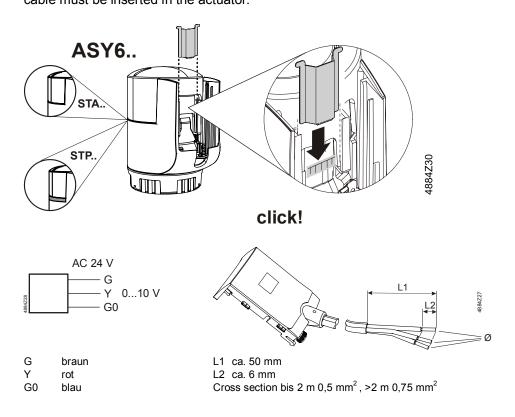

Standard connecting cable for all STA.. and STP.. Actuators for open/close positioning signal AC 24 V or AC 230 V with PVC coating. Lengths 0.8...15 m.

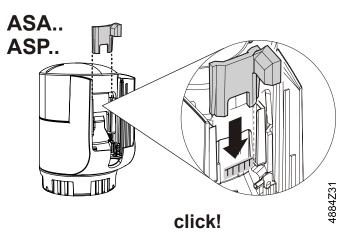

ASY6AL..

The connecting cables are available in various lengths, colors and coating quality with DC 0...10 V control module and AC 24 V voltage supply, can be combined with STA73/00 thermal actuators. To this end, the metal bridge supplied with the cable must be inserted in the actuator.

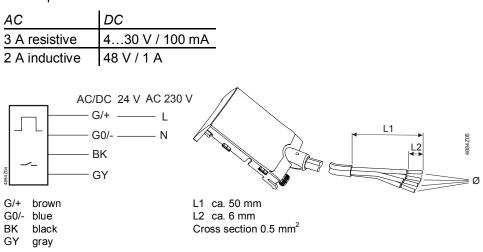

ASY6PL.. The connecting cables are available in various lengths, colors and coating quality with DC 0...10 V control module and AC 24 V voltage supply, can be combined with STP73/00 thermal actuators. To this end, the metal bridge supplied with the cable must be inserted in the actuator.

ASA23U.. with aux. switch for STA../00 ASP23U.. with aux. switch for STP../00 Connecting cable with PVC coating and integrated auxiliary switch for all STA../00, STP../00 actuators for open/close positioning signal AC 24 V or AC 230 V. Lengths 1 or 2 m. To this end, the plastic bridge supplied with the cable must be inserted in the actuator.

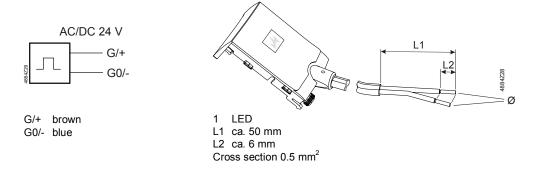

Switch power:

Switch-point: Between 1.5 and 2.3 mm stroke

ASY23..LD with LED indicator

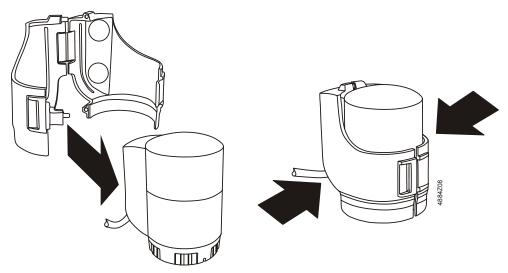

The same as AS..23U but for AC/DC 24 V only. The green LED is lit synchronously with the open/close control. It visually indicates control and provides support during commissioning and service. Lengths 1 or 2 m.

Adapter AV.. for thirdparty valves Adapters are available for mounting the STA.. and STP.. actuators on valves from other manufacturers (see "Accessories/Adapters" on page 5).

Tamper-proof fitting AL431

Tamper-proof fittings can be used to prevent unauthorized intervention on the actuators.

Mounting on valve	Mounting instructions are included in the packaging.
	Actuators STA or STP are supplied as separate units. They can be assembled with just a few movements prior to commissioning:
	 Remove the protective cover from the valve body Insert the sliding sleeve, bayonet-nut, on the valve and manually tighten Put actuator in position and manually tighten (clockwise) the bayonet-ring until a second click STA/00, STP/00: Plug in the connecting cable Connect to operating voltage only after mounting
	Hints for the dismounting:
	 Interrupt the power supply and disconnect the connection cable Wait for 6 min. until the actuator is cooled down
	• Turn the sliding sleeve, bayonet-ring, counter clockwise to the end-position At dismounting the actuator will be set automatically to the original position (factory setting).
	Seldom may happen that the actuator will be released from the valve together with the valve whereby the bayonet-nut stuck in the actuator. In order to re-use the actuator, the actuator's stem has to be re-set to the original position (factory setting). For this purpose, turn the actuator up-side-down and push back the stem with simultaneous counter clock wise turning of the sliding sleeve, bayonet-ring, until latching.
⚠ Warning	Do not use pipe wrenches, spanners or similar!
Mounting positions	Actuators may be installed in all positions (IP54 standard guaranteed).
Notes on electrical installation	 Comply with all local regulations when installing. Connect the connecting cable downward and away from the bottom. Provide for a means to isolate from mains power/connecting voltage, e.g. by connecting an automatic circuit breaker or switch fuse upstream of the control unit.

unit.

Maintenance

	The actuator is maintenance-free.
Repair	Disconnect the connecting cable from the operating voltage prior to replacing. Opening the actuator can cause irreparable damage. It may also result in injury from the installed, strong spring. The actuator cannot be repaired; the entire unit must be replaced.
Disposal	Do not dispose of the device in domestic waste. Legislation may demand special handling of certain components, or it may be sensible from an ecological point of view. Observe all local, applicable laws.
Warranty	

The technical data relating to specific applications are valid only in conjunction with the valves listed under "Equipment combinations" in this data sheet on page "5".

When using STA.. and STP.. actuators, users are responsible for ensuring the proper functioning of actuators when used together with third-party valves; any guarantees on the part of Siemens Building Technologies expire accordingly.

tandard for ctuators and	CE conformity As per EMC directive:	2004/108/EC				
onnecting cables	Immunity	EN 61000-6-1 Residential				
	Emissions	EN 61000-6-3 Residential				
	Electrical safety	SELV (PELV as per IEC 60364-4-41)				
	Low-voltage directive	2006/95/EC				
	Protection class as per	EN 60730 Class III	EN 60730 Class II	EN 60730 Class III		
	Degree of pollution		As per EN 60730 class II			
	Housing type		IP54 as per EN 60529			
	Environmental compatibility		ISO 14001 (environment)			
		ISO 9001 (quality) SN 36350 (Environmentally compatible products) RL 2002/95/EC (RoHS)				
imensions	Dimensions	See "Dimensions" on page 10		3		
/eight	Actuator weight					
	Weight of connecting cable ASY	See table "Type summary" actuators with and without connecting cable on particular See table Accessories page 4				
laterials STA, STP	Cover and lower part		Polycarbonate			
Conn. cables	ASY, ASP		PVC			
	ASYHF	Halogen-free as per VDE 0207-24				

3)

PEIMitted for safety extra-fow voltage only (SELV, FEEV) PDM = Pulse-duration modulation STA73/00, STA73MP/00 and STA73B/00, with connecting cable ASY6AL.. STP73B/00 STP73/00 and with connecting cable ASY6PL..

4) Can be set using the DIP switch under the cover on the connecting cable. See Mounting instructions M4884

5) 6)

Separate cable, see page 16 Min. runtime ca. 30 s/mm in control mode (heat-up time)

General ambient conditions		Operation EN 60721-3-3	Transportation EN 60721-3-2	Storage EN 60721-3-1
	Temperature	550 °C	–20…60 °C	550 °C
	Temperature for quasi-continuous control	540 °C	-	-
	Humidity	< 85 % r.h.	< 95% r.h.	5100 % r.h.

Connecting cables

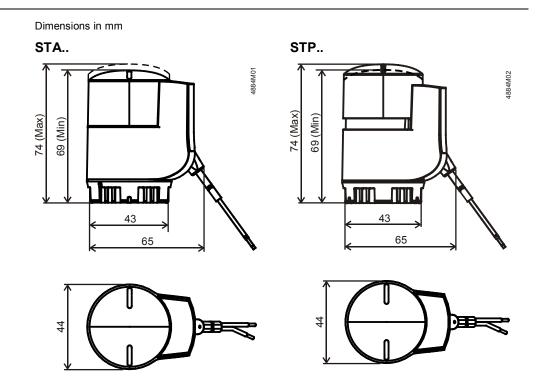

Connecting cables w/o 010 V module		ASY23	ASY23B	ASY23HF	ASY23LD	ASA23	ASP23
	Length [m]	0.815	310	210	2/5	1/2	1 /2
