1. About this document

1.1 Function

This operating instructions manual provides all the information you need for the mounting, set-up and commissioning to ensure the safe operation and disassembly of the safety-monitoring module. The operating instructions must be available in a legible condition and a complete version in the vicinity of the device.

1.2 Target group: authorised qualified personnel

All operations described in this operating instructions manual must be carried out by trained specialist personnel, authorised by the plant operator only.

Please make sure that you have read and understood these operating instructions and that you know all applicable legislations regarding occupational safety and accident prevention prior to installation and putting the component into operation.

The machine builder must carefully select the harmonised standards to be complied with as well as other technical specifications for the selection, mounting and integration of the components.

1.3 Explanation of the symbols used

Information, hint, note:

This symbol is used for identifying useful additional information.

Caution: Failure to comply with this warning notice could lead to failures or malfunctions. **Warning:** Failure to comply with this warning notice could lead to physical injury and/or damage to the machine.

1.4 Appropriate use

The products described in these operating instructions are developed to execute safety-related functions as part of an entire plant or machine. It is the responsibility of the manufacturer of a machine or plant to ensure the correct functionality of the entire machinery or plant.

The safety-monitoring module must be exclusively used in accordance with the versions listed below or for the applications authorised by the manufacturer. Detailed information regarding the range of applications can be found in the chapter "Product description".

To op sta

To avoid EMC disturbances, the physical ambient and operational conditions at the place where the product is installed, must meet the provisions laid down in the paragraph "Electromagnetic Compatibility (EMC)" of DIN EN 60204-1.

1.5 General safety instructions

The user must observe the safety instructions in this operating instructions manual, the country-specific installation standards as well as all prevailing safety regulations and accident prevention rules.

Further technical information can be found in the Schmersal catalogues or in the online catalogue on the Internet: www.schmersal.net.

The information contained in this operating instructions manual is provided without liability and is subject to technical modifications.

x.000 / Januar 2014 / v.A. - 101181896-EN / C / 2014-01-28 / AE-Nr. 2858

S SCHMERSAL

EN

Ĭ

The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.

There are no residual risks, provided that the safety instructions as well as the instructions regarding mounting, commissioning, operation and maintenance are observed.

1.6 Warning about misuse

In case of inadequate or improper use or manipulations of the safety-monitoring module, personal hazards or damage to machinery or plant components cannot be excluded. The relevant requirements of the standards EN 1088 and EN ISO 13850 must be observed.

1.7 Exclusion of liability

We shall accept no liability for damages and malfunctions resulting from defective mounting or failure to comply with this operating instructions manual. The manufacturer shall accept no liability for damages resulting from the use of unauthorised spare parts or accessories.

For safety reasons, invasive work on the device as well as arbitrary repairs, conversions and modifications to the device are strictly forbidden; the manufacturer shall accept no liability for damages resulting from such invasive work, arbitrary repairs, conversions and/or modifications to the device.

The safety-monitoring module must only be used when the enclosure is closed, i.e. with the front cover fitted.

2. Product description

2.1 Ordering code

This operating instructions manual applies to the following types:

No.	Option	Description
1	24V	24 VAC/DC
	115V	115 VAC
	230V	230 VAC

Only if the information described in this operating instructions manual are realised correctly, the safety function and therefore the compliance with the Machinery Directive is maintained.

2.2 Special versions

For special versions, which are not listed in the order code below 2.1, these specifications apply accordingly, provided that they correspond to the standard version.

2.3 Destination and use

The safety-monitoring modules for integration in safety circuits are designed for fitting in control cabinets. They are used for the safe evaluation of the signals of positive break position switches for safety functions on sliding, hinged and removable safety guards as well as emergency stop control devices and AOPD's (light barriers).

The safety function is defined as the opening of enabling circuits 13-14, 23-24 and 33-34 when the inputs S11-S12 and/or S21-S22 and/or S11-S52 are opened. The safety-relevant current paths with the output contacts 13-14, 23-24 and 33-34 meet the following requirements under observation of a B_{10d} value assessment (also refer to "Requirements to DIN EN ISO 13849-1"):

- control category 4 - PL e to DIN EN ISO 13849-1

- corresponds to SIL 3 to DIN EN 61508-2

- corresponds to SILCL 3 to DIN EN 62061

(corresponds to control category 4 to DIN EN 954-1)

To determine the Performance Level (PL) of the entire safety function (e.g. sensor, logic, actuator) to DIN EN ISO 13849-1, an analysis of all relevant components is required.

2.4 Technical data General data

General data:	
Standards:	IEC/EN 60204-1, EN 60947-5-1,
	EN ISO 13849-1, IEC/EN 61508
Climate resistance:	EN 60068-2-78
Mounting: Snap	s onto standard DIN rail to EN 60715
Terminal designations:	EN 60947-1
Material of the housings:	Plastic, glass-fibre reinforced
5	thermoplastic, ventilated
Material of the contacts:	AgSnO, self-cleaning, positive drive
Weight:	24 V-version: 330 g
	115 V- / 230 V-version: 440 g
Start conditions:	Automatic or start button (monitored)
Feedback circuit available:	yes
Pull-in delay:	typ. 20 ms
Drop-out delay in case of emergend	
Drop-out delay on "supply failure":	typ. 40 ms
Mechanical data:	
Connection type:	Screw connection
Cable section:	Min. 0,25 mm ² / max. 2,5 mm ²
Connecting cable:	rigid or flexible
Tightening torque for the terminals:	0.6 Nm
With removable terminals:	No
Mechanical life:	
	10 million operations
Resistance to shock: Resistance to vibrations to EN 6006	10 g / 11 ms
Resistance to vibrations to EN 6000	
	amplitude 0.35 mm
Ambient temperature:	-25 °C +60 °C
Storage and transport temperature: Protection class:	-40 °C +85 °C Enclosure: IP40
Protection class.	
	Terminals: IP20
	Clearance: IP54
Air clearances and creaned	
Air clearances and creepage	$\frac{1}{12} \frac{1}{12} \frac$

Operating instructions Safety-monitoring module

Outputs:	
Number of safety contacts:	3
Number of auxiliary contacts:	3
Number of signalling outputs:	0
Switching capacity of the safety contacts:	13-14, 23-24, 33-34:
	max. 250 V, 8 A ohmic
(inductive in case of appre	opriate protective wiring);
AC-15: 230 VAC / 6	A, DC-13: 24 VDC / 6 A;
	min. 10 V / 10 mA
Switching capacity of the auxiliary contacts:	41-42: 24 VDC / 2 A
Fuse rating of the safety contacts:	external (I _k = 1000 A)
	to EN 60947-5-1
Safety fuse 10 A	quick blow, 8 A slow blow
Fuse rating for the auxiliary contacts:	external (I _k = 1000 A)
	to EN 60947-5-1
Safety fuse 2.5 A	quick blow, 2 A slow blow
Utilisation category to IEC/EN 60947-5-1:	AC-15: 230 VAC / 6 A
	DC-13: 24 VDC / 6 A
Dimensions H x W x D:	100 x 45 x 121 mm
The data specified in this manua	I are applicable when the
component is operated with rated o	perating voltage U _e ±0%.

2.5 Safety classification

Standards:	EN ISO 13849-1, IEC 61508, EN 60947-5-1
PL:	up to e
Control category:	up to 4
DC:	99% (high)
CCF:	> 65 points
PFH value:	≤ 2.00 × 10 ⁻⁸ /h
SIL:	up to 3
Service life:	20 years

The PFH value of 2.00 × 10⁻⁸/h applies to the combinations of contact load (current through enabling contacts) and number of switching cycles $(n_{op/y})$ mentioned in the table below. At 365 operating days per year and a 24-hours operation, this results in the below-mentioned switching cycle times $(t_{\mbox{\scriptsize cycle}})$ for the relay contacts. Diverging applications upon request.

Contact load n_{op/y} t_{cycle} 20 % 525,600 1.0 min 40 % 210,240 2 5 min 60 % 75,087 7.0 min 80 % 30,918 17.0 min 100 % 12.223 43.0 min

3. Mounting

3.1 General mounting instructions

Mounting: snaps onto standard DIN rails to EN 60715.

Snap the bottom of the enclosure slightly tilted forwards in the DIN rail and push up until it latches in position.

3.2 Dimensions

All measurements in mm.

Device dimensions (H/W/D): 100 x 45 x 121 mm

4. Electrical connection

4.1 General information for electrical connection

As far as the electrical safety is concerned, the protection against unintentional contact of the connected and therefore electrically interconnected apparatus and the insulation of the feed cables must be designed for the highest voltage, which can occur in the device.

The electrical connection may only be carried out by authorised personnel in a de-energised condition.

Wiring examples: see appendix

5. Operating principle and settings

5.1 LED functions

• K1: Status channel 1

- K2: Status channel 2
- U_B: Status operating voltage (LED is on, when the operating voltage on the terminals A1-A2 is ON)

5.2 Description of the terminals

Voltages:	A1	+24 VDC / 24 VAC; 115 V; 230 V
	A2	0 VDC / 24 VAC; 115 V; 230 V
Inputs:	S11-S12	Input channel 1 (+)
	S11-S52	Input channel 2 (+)
	S21-S22	Input channel 2 (-) (with cross-wire short
		detection)
Outputs:	13-14	First safety enabling circuit
	23-24	Second safety enabling circuit
	33-34	Third safety enabling circuit
	41-42	Auxiliary NC contact as signalling contact
Start:	Y1-Y2	Feedback circuit
	S33-S34	Feedback circuit and external reset (monitored)
	Y36-Y37	Feedback circuit and external reset (not
		monitored)

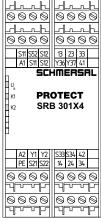

Fig. 1

5.3 Notes

Signalling outputs must not be used in safety circuits.

Due to the operating principle of the electronic fuse, the customer must check that no hazard is caused by an unexpected restart in circuits without reset button (automatic reset).

6. Set-up and maintenance

6.1 Functional testing

- The safety function of the safety-monitoring module must be tested. The following conditions must be previously checked and met:
- 1. Correct fixing
- 2. Check the integrity of the cable entry and connections
- 3. Check the safety-monitoring module's enclosure for damage.
- Check the electrical function of the connected sensors and their influence on the safety-monitoring module and the downstream actuators

6.2 Maintenance

A regular visual inspection and functional test, including the following steps, is recommended:

- 1. Check the correct fixing of the safety-monitoring module
- 2. Check the cable for damages
- 3. Check electrical function

The device has to be integrated into the periodic check-ups according to the Ordinance on Industrial Safety and Health, however at least 1 × year.

Damaged or defective components must be replaced.

7. Disassembly and disposal

7.1 Disassembly

The safety-monitoring module must be disassembled in a de-energised condition only. Push up the bottom of the enclosure and hang out slightly tilted forwards.

7.2 Disposal

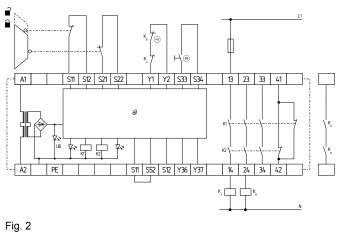

The safety-monitoring module must be disposed of in an appropriate manner in accordance with the national prescriptions and legislations.

8. Appendix

8.1 Wiring examples

Dual-channel control, shown for a guard door monitor with two position switches where one has a positive break contact; with external reset button (R) (Fig. 2)

- Relay outputs: Suitable for 2-channel control, for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- The control system recognises wire breakage, earth faults and crosswire shorts in the monitoring circuit.
- 🐵 = Feedback circuit

8.2 Start configuration

External reset button (with edge detection) (see Fig. 3)

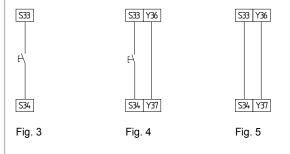

- The external reset button is integrated as shown.
- The safety-monitoring module is activated by the reset (after release) of the reset button (= detection of the trailing edge). Faults in the reset button, e.g. welded contacts or manipulations which could lead to an inadvertent restart, are detected in this configuration and will result in an inhibition of the operation.

External reset button (without edge detection) (see Fig. 4)

- The external reset button is integrated as shown.
- The safety-monitoring module is activated upon actuation of the reset button.

Automatic start (see Fig. 5)

- The automatic start is programmed by connecting the feedback circuit to the terminals.
- Caution: Not admitted without additional measure due to the risk of gaining access by stepping behind!
- Caution: Within the meaning of EN IEC 60204-1 paragraph 9.2.5.4.2 and 10.8.3, the operating mode "automatic start" is only restrictedly admissible. In particular, any inadvertent restart of the machine must be prevented by other suitable measures.

8.3 Sensor configuration

Feedback loop (Fig. 6)

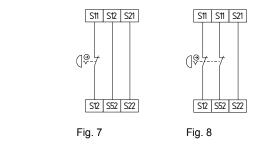

- The feedback circuit is integrated as shown.
- If the feedback circuit is not required, establish a bridge.

Single-channel emergency stop circuit with command devices to DIN EN ISO 13850 (EN 418) and EN 60947-5-5 (Fig. 7)

- Wire breakage and earth leakage in the control circuits are detected.
- Control category: 2 to EN 954-1
- Category 2 PL d to DIN EN 13849-1 possible

Dual-channel emergency stop circuit with command devices to DIN EN ISO 13850 (EN 418) and EN 60947-5-5 (Fig. 8)

- The control system recognises wire-breakage and earth faults in the control circuit.
- Cross-wire shorts between the control circuits are not detected.
- Control category: 3 to EN 954-1
- Category 4 PL e to DIN EN ISO 13849-1 possible (with protective wiring)

(EN)

Y1

(H2)

Y2

Fig. 6

Dual-channel emergency stop circuit with command devices to DIN EN ISO 13850 (EN 418) and EN 60947-5-5 (Fig. 9)

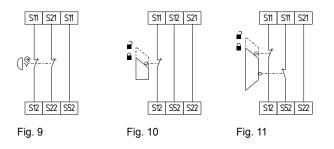

- The control system recognises wire-breakage and earth faults in the control circuit.
- · Cross-wire shorts between the control circuits are detected.
- Control category: 4 to EN 954-1
- Category 4 PL e to DIN EN ISO 13849-1 possible.

Single-channel guard door monitoring circuit with interlocking devices to EN 1088 (Fig. 10)

- At least one contact with positive break required.
- Wire breakage and earth leakage in the control circuits are detected.
- Control category: 2 to EN 954-1
- Category 2 PL d to DIN EN ISO 13849-1 possible.

Dual-channel guard door monitoring circuit with interlocking device to EN 1088 (see Fig. 11)

- · With at least one positive-break position switch
- The control system recognises wire-breakage and earth faults in the control circuit.
- Cross-wire shorts between the control circuits are not detected.
- · Control category: 3 to EN 954-1
- Category 4 PL e to DIN EN ISO 13849-1 possible (with protective wiring)

Dual-channel guard door monitoring circuit with interlocking device to EN 1088 (see Fig. 12)

- · With at least one positive-break position switch
- The control system recognises wire-breakage and earth faults in the control circuit.
- · Cross-wire shorts between the control circuits are detected.
- Control category: 4 to EN 954-1
- Category 4 PL e to DIN EN 13849-1 possible

Dual-channel control of a safety-related electronic (microprocessor-based) safety guard with p-type transistor outputs e.g. AOPD's to EN IEC 61496 (see Fig. 13)

- The control system recognises wire-breakage and earth faults in the control circuit.
- The safety-monitoring module therefore is not equipped with a cross-wire short detection here. The safety-monitoring module therefore is not equipped with a cross-wire short detection here.
- · Control category: 3 to EN 954-1
- If cross-wire shorts in the control circuits are detected by the safety guard:
- control category 4 to EN 954-1
- category 4 PL e to DIN EN ISO 13849-1 possible

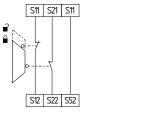

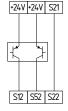

Fig. 12

8.4 Actuator configuration

Single-channel control with feedback circuit (Fig. 14)

- Suitable for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- 🐵 = feedback circuit:
- If the feedback circuit is not required, establish a bridge.

Dual-channel control with feedback circuit (Fig. 15)

- If the feedback circuit is not required, establish a bridge.

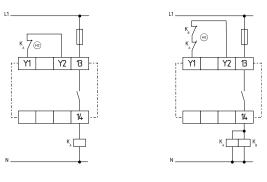

Fig. 14

Fig. 15

Differential control with feedback circuit (see Fig. 16)

• Suitable for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.

• 🐵 = feedback circuit:

If the feedback circuit is not required, establish a bridge. If the enabling circuit of the controller must be equipped with its own feedback circuit, this circuit must be integrated as shown in the wiring example "dual-channel control with feedback circuit" (see there).

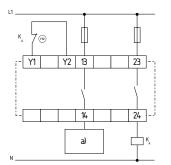

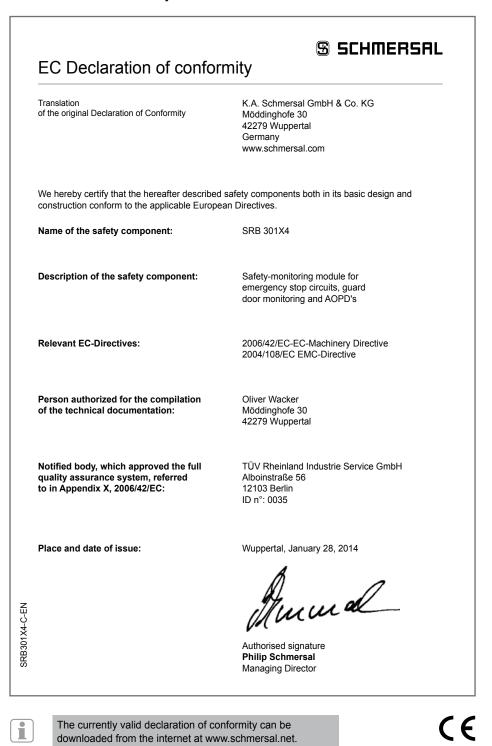

Fig. 16 a) Enabling signal controller
