SCHMERSAL

Content

1. About this document

1.1 Function

This operating instructions manual provides all the information you need for the mounting, set-up and commissioning to ensure the safe operation and disassembly of the safety-monitoring module. The operating instructions must be available in a legible condition and a complete version in the vicinity of the device.

1.2 Target group: authorised qualified personnel

All operations described in this operating instructions manual must be carried out by trained specialist personnel, authorised by the plant operator only.

Please make sure that you have read and understood these operating instructions and that you know all applicable legislations regarding occupational safety and accident prevention prior to installation and putting the component into operation.

The machine builder must carefully select the harmonised standards to be complied with as well as other technical specifications for the selection, mounting and integration of the components.

1.3 Explanation of the symbols used

Information, hint, note:
This symbol is used for identifying useful additional information.

Caution: Failure to comply with this warning notice could lead to failures or malfunctions.
Warning: Failure to comply with this warning notice could lead to physical injury and/or damage to the machine.

1.4 Appropriate use

The products described in these operating instructions are developed to execute safety-related functions as part of an entire plant or machine. It is the responsibility of the manufacturer of a machine or plant to ensure the correct functionality of the entire machinery or plant.

The safety-monitoring module must be exclusively used in accordance with the versions listed below or for the applications authorised by the manufacturer. Detailed information regarding the range of applications can be found in the chapter "Product description".

To avoid EMC disturbances, the physical ambient and operational conditions at the place where the product is installed, must meet the provisions laid down in the paragraph "Electromagnetic Compatibility (EMC)" of DIN EN 60204-1.

1.5 General safety instructions

The user must observe the safety instructions in this operating instructions manual, the country-specific installation standards as well as all prevailing safety regulations and accident prevention rules.

Further technical information can be found in the Schmersal catalogues or in the online catalogue on the Internet: www.schmersal.net.

The information contained in this operating instructions manual is provided without liability and is subject to technical modifications.

x.000 / April 2014 / v.A. - 101195577-EN / C / 2014-03-10 / AE-Nr. 2855

The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.

There are no residual risks, provided that the safety instructions as well as the instructions regarding mounting, commissioning, operation and maintenance are observed.

1.6 Warning about misuse

In case of inadequate or improper use or manipulations of the safety-monitoring module, personal hazards or damage to machinery or plant components cannot be excluded. The relevant requirements of the standards EN 1088 and EN ISO 13850 must be observed.

1.7 Exclusion of liability

We shall accept no liability for damages and malfunctions resulting from defective mounting or failure to comply with this operating instructions manual. The manufacturer shall accept no liability for damages resulting from the use of unauthorised spare parts or accessories.

For safety reasons, invasive work on the device as well as arbitrary repairs, conversions and modifications to the device are strictly forbidden; the manufacturer shall accept no liability for damages resulting from such invasive work, arbitrary repairs, conversions and/or modifications to the device.

The safety-monitoring module must only be used when the enclosure is closed, i.e. with the front cover fitted.

2. Product description

2.1 Ordering code

This operating instructions manual applies to the following types:

SRB 320XV3 V.2

Only if the information described in this operating instructions manual are realised correctly, the safety function and therefore the compliance with the Machinery Directive is maintained.

2.2 Special versions

For special versions, which are not listed in the order code below 2.1, these specifications apply accordingly, provided that they correspond to the standard version.

2.3 Destination and use

The safety-monitoring modules for integration in safety circuits are designed for fitting in control cabinets. They are used for the safe evaluation of the signals of positive break position switches for safety functions on sliding, hinged and removable safety guards as well as emergency stop control devices and AOPD's (light barriers).

The safety function is defined as the opening of the enabling circuits 13-14, 23-24 and 33-34 and the delayed opening of the enabling circuits 47-48 and 57-58 when the inputs S11-S12 and/or S21-S22 are opened. The safety-relevant current paths with the output contacts 13-14, 23-24 and 33-34 meet the following requirements under observation of a B_{10d} value assessment (also refer to "Requirements to DIN EN ISO 13849-1"):
– control category 4 – PL e to DIN EN ISO 13849-1
– corresponds to SIL 3 to DIN EN 61508-2
– corresponds to SILCL 3 to DIN EN 62061
(corresponds to control category 4 to DIN EN 954-1)

The safety-relevant current path with the output contacts 47-48 and 57-58 meets the following requirements under observation of a B_{10d} value assessment (also refer to "Requirements to DIN EN ISO 13849-1"):
– control category 3 – PL d to DIN EN ISO 13849-1
– corresponds to SIL 2 to DIN EN 61508-2
– corresponds to SILCL 2 to DIN EN 62061
(corresponds to control category 3 to DIN EN 954-1)

To determine the Performance Level (PL) of the entire safety function (e.g. sensor, logic, actuator) to DIN EN ISO 13849-1, an analysis of all relevant components is required.

If multiple safety components are wired in series, the Performance Level to EN ISO 13849-1 will be reduced due to the restricted error detection under certain circumstances. The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.

2.4 Technical data

General data:	
Standards:	IEC/EN 60204-1, EN 60947-5-1, EN ISO 13849-1, IEC/EN 61508
Climate resistance:	EN 60068-2-78
Mounting:	Snaps onto standard DIN rail to EN 60715
Terminal designations:	EN 60947-1
Material of the housings:	Plastic, glass-fibre reinforced thermoplastic, ventilated
Material of the contacts:	AgSnO, AgNi, self-cleaning, positive drive
Weight:	420 g
Start conditions:	Automatic or start button (monitored)
Feedback circuit available:	yes
Pull-in delay with reset button:	typ. 20 ms
Drop-out delay in case of emergency stop:	typ. 25 ms
Drop-out delay on "supply failure":	typ. 50 ms
Mechanical data:	
Connection type:	Screw connection
Cable section:	min. 0.25 mm² / max. 2.5 mm²
Connecting cable:	rigid or flexible
Tightening torque for the terminals:	0.6 Nm
With removable terminals:	No
Mechanical life:	10 million operations
Resistance to shock:	10 g / 11 ms
Resistance to vibrations to EN 60068-2-6:	10 … 55 Hz, amplitude 0.35 mm
Ambient temperature:	–25 °C … +60 °C
Storage and transport temperature:	–40 °C … +85 °C
Protection class:	Enclosure: IP40 Terminals: IP20 Clearance: IP54
Air clearances and creepage distances to IEC/EN 60664-1:	4 kV/2 (basic insulation)
EMC rating:	to EMC Directive
Electrical data:	
Contact resistance in new state:	max. 100 mΩ
Power consumption:	max. 2.6 W / 5.4 VA
Rated operating voltage U_e:	24 VDC: –15% / +20%, residual ripple max. 10%, 24 VAC: –15% / +10%
Frequency range:	50 / 60 Hz
Fuse rating for the operating voltage:	Internal electronic trip, Tripping current > 0,9 A, Reset after approx. 1 sec.

Current and voltage at the control circuits:	
- S11, S12:	24 VDC, continuous current: 60 mA
- S13, S14:	24 VDC, start impulse: 250 mA / 15 ms
- S21, S22:	24 VDC, continuous current: 20 mA; start impulse: 360 mA / 10 ms
- S31, S32:	24 VDC, continuous current: 65 mA
- S33, S34:	24 VDC, start impulse: 180 mA / 5 ms
Monitored inputs:	
Cross-wire detection:	optional
Wire breakage detection:	yes
Earth connection detection:	yes
Number of NO contacts:	0
Number of NC contacts:	2
Conduction resistance:	max. 40 Ω
Outputs:	
Number of safety contacts:	5
Number of auxiliary contacts:	0
Number of signalling outputs:	0
Switching capacity of the safety contacts:	
13-14, 23-24, 33-34 (STOP 0):	max. 250 V / 8 A ohmic (inductive in case of appropriate protective wiring); AC-15: 230 VAC / 6 A, DC-13: 24 VDC / 6 A; Residual current UB = 24 VDC at ambient temperature up to 45°C: 18 A / 55°C: 17,5 A / 65°C: 15 A; Residual current UB = 24 VAC at ambient temperature up to 45°C: 17,5 A / 55°C: 13,5 A / 65°C: 12 A;
- 47-48, 57-58 (STOP 1):	max. 250 V / 8 A ohmic (inductive in case of appropriate protective wiring); AC-15: 230 VAC / 3 A, DC-13: 24 VDC / 2 A; Residual current UB = 24 VDC at ambient temperature up to 45°C: 12 A / 55°C: 11 A / 65°C: 10 A; Residual current UB = 24 VAC at ambient temperature up to 45°C: 11 A / 55°C: 9 A / 65°C: 8 A
Fuse rating of the safety contacts:	STOP 0: 8 A slow blow, STOP 1: 8 A slow blow
Utilisation category to EN 60947-5-1:	AC-15, DC-13
Dimensions H x W x D:	100 mm × 45 mm × 121 mm
	The data specified in this manual are applicable when the component is operated with rated operating voltage U_e ±0%.

2.5 Safety classification

Standards:	EN ISO 13849-1, IEC 61508, EN 60947-5-1
PL:	up to e
Control category:	up to 4
DC:	99% (high)
CCF:	> 65 points
PFH value:	≤ 2.00 × 10^{-8}/h
SIL:	up to 3
Service life:	20 years

The PFH value of 2.00 × 10^{-8}/h applies to the combinations of contact load (current through enabling contacts) and number of switching cycles ($n_{op/y}$) mentioned in the table below. At 365 operating days per year and a 24-hours operation, this results in the below-mentioned switching cycle times (t_{cycle}) for the relay contacts.
Diverging applications upon request.

Contact load	$n_{op/y}$	t_{cycle}
20 %	525,600	1.0 min
40 %	210,240	2.5 min
60 %	75,087	7.0 min
80 %	30,918	17.0 min
100 %	12,223	43.0 min

3. Mounting

3.1 General mounting instructions

Mounting: snaps onto standard DIN rails to EN 60715.

Snap the bottom of the enclosure slightly tilted forwards in the DIN rail and push up until it latches in position.

3.2 Dimensions

All measurements in mm.

Device dimensions (H/W/D): 100 x 45 x 121 mm

4. Electrical connection

4.1 General information for electrical connection

As far as the electrical safety is concerned, the protection against unintentional contact of the connected and therefore electrically interconnected apparatus and the insulation of the feed cables must be designed for the highest voltage, which can occur in the device.

The electrical connection may only be carried out by authorised personnel in a de-energised condition.

Wiring examples: see appendix

5. Operating principle and settings

5.1 LED functions

- K1: Status channel 1
- K2: Status channel 2
- K3: Status delayed enabling circuit (LED is ON, when the delayed enabling circuits 47-48 are closed)
- K4: Status delayed enabling circuit (LED is ON, when the delayed enabling circuits 57-58 are closed)
- U_B: Status operating voltage (LED is on, when the operating voltage on the terminals A1-A2 is ON)
- Start: LED is briefly on at the start-up of the safety-monitoring module

5.2 Description of the terminals (see Fig. 1)

Voltages:	A1	+24 VDC / 24 VAC
	A1.1	+24 VDC / 24 VAC
	A2	0 VDC / 24 VAC
Inputs:	S11-S12	Input channel 1 (+)
	S11-S32	Input channel 2 (+)
	S21-S22	Input channel 2 (–) (with cross-wire short detection)
	S31-S32	Input channel 2 (+) (with cross-wire short detection)
Outputs:	13-14	First safety enabling circuit (STOP 0)
	23-24	Second safety enabling circuit (STOP 0)
	33-34	Third safety enabling circuit (STOP 0)
	47-48	Fourth safety enabling circuit (STOP 1)
	57-58	Fifth safety enabling circuit (STOP 1)
Start:	S33-S34	Feedback circuit and external reset (monitored)
	S13-S14	Automatic start
	Y39-Y40	Reset timer

Opening the front cover (see Fig. 2)
- To open the front cover, insert a slotted screwdriver in the top and bottom cover notch and gently lift it.
- When the front cover is open, the electrostatic discharge requirements must be respected and observed.
- After setting, the front cover must be fitted back in position.
- The set drop-out delay must be entered on the front cover.

Only touch the components after electrical discharge!

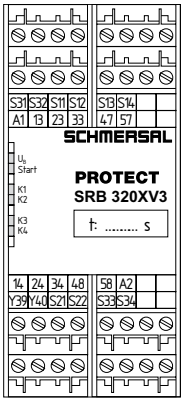

Fig. 1

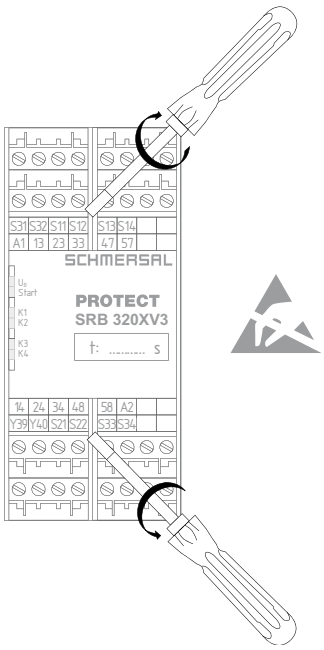

Fig. 2

Time setting (see Fig. 3 and 4)
- DIP switch settings:
- The DIP switches are located underneath the front cover of the safety-monitoring module (see Fig. 3 and 4).
- Both DIP switches SW 1 (channel 1) and SW 2 (channel 2) must be set identically.
- The DIP switches can be set when the operating voltage is on; however, in order for the setting to be saved in the SRB 320XV3, the voltage supply must be interrupted for approx. 3 seconds.

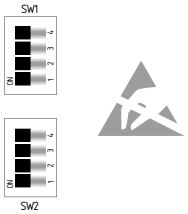

Fig. 3

New adjustable drop-out delays and cross-wire short monitoring for version V.2! See Fig. 4. Tolerance ± 2%

DIP switch setting	Drop-out delay	DIP switch setting	Drop-out delay
	<0,1 s		5.0 s
	0.5 s		8.5 s
	1.0 s		10.0 s
	1.5 s		12.0 s
	2.0 s		15.0 s
	2.5 s		20.0 s
	3.0 s		25.0 s
	4.0 s		30.0 s

Fig. 4

5.3 Notes

Reduction of the delay time (see Fig. 5)
- To enable a premature ending of the drop-out delay, an NC contact must be installed at the pins Y39-Y40.
- If the feedback circuit is not required, establish a bridge.

Delayed enabling circuits (see Fig. 6)
- The drop-out delay of the safety enabling circuits 47-48 and 57-58 can be set within the range of 0...30 seconds by means of DIP switches. The DIP switches are located underneath the front cover of the safety-monitoring module.
- The safety enabling circuits 47-48 and 57-58 meet STOP category 1 to EN 60204-1.
- The safety enabling circuits 13-14, 23-24 and 33-34 meet STOP category 0 to EN 60204-1.

Fig. 5

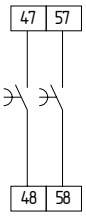

Fig. 6

Setting report SRB 320 XV3 V.2

- This report regarding the setting of the device must be completed accordingly by the customer and enclosed in the technical manual of the machine.

The setting report must be available whenever a safety check is performed.

Company: _____

The safety-monitoring module is used in the following machine:

_____	_____	_____
Machine n°	Machine type	Module n°

Set drop-out delay: _____

_____	_____
Set on (date)	Signature of the responsible person

6. Set-up and maintenance

6.1 Functional testing

The safety function of the safety-monitoring module must be tested.
The following conditions must be previously checked and met:

1. Correct fixing
2. Check the integrity of the cable entry and connections
3. Check the safety-monitoring module's enclosure for damage.
4. Check the electrical function of the connected sensors and their influence on the safety-monitoring module and the downstream actuators

6.2 Maintenance

A regular visual inspection and functional test, including the following steps, is recommended:

1. Check the correct fixing of the safety-monitoring module
2. Check the cable for damages
3. Check electrical function

The device has to be integrated into the periodic check-ups according to the Ordinance on Industrial Safety and Health, however at least 1 × year.

Damaged or defective components must be replaced.

7. Disassembly and disposal

7.1 Disassembly

The safety-monitoring module must be disassembled in a de-energised condition only. Push up the bottom of the enclosure and hang out slightly tilted forwards.

7.2 Disposal

The safety-monitoring module must be disposed of in an appropriate manner in accordance with the national prescriptions and legislations.

8. Appendix

8.1 Wiring examples

Dual-channel control, shown for a guard door monitor; with two contacts A and B, where at least one is a positive break contact; with external reset button Ⓡ (see Fig. 7)

- Relay outputs: Suitable for 2-channel control, for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- The control system recognises wire breakage, earth faults and cross-wire shorts in the monitoring circuit.
- F2 = hybrid fuse 50 mA / 800 mA
- Ⓗ2 = Feedback circuit

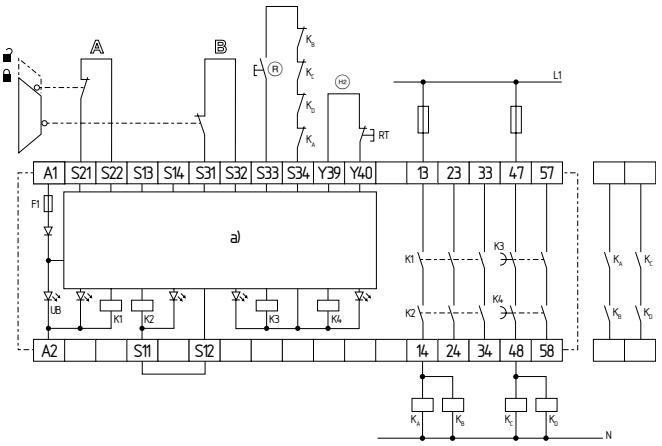

Fig. 7 a) channel control

8.2 Start configuration

External reset button (with edge detection) (see Fig. 8)

- The external reset button is integrated as shown.
- The safety-monitoring module is activated by the reset (after release) of the reset button (= detection of the trailing edge). Faults in the reset button, e.g. welded contacts or manipulations which could lead to an inadvertent restart, are detected in this configuration and will result in an inhibition of the operation.

Automatic start (see Fig. 9)

- The automatic start is programmed by connecting the feedback circuit to the terminals. If the feedback circuit is not required, establish a bridge.
- Caution: Not admitted without additional measure due to the risk of gaining access by stepping behind!
- Caution: Within the meaning of EN IEC 60204-1 paragraph 9.2.5.4.2 and 10.8.3, the operating mode "automatic start" is only restrictedly admissible. In particular, any inadvertent restart of the machine must be prevented by other suitable measures.

Due to the operating principle of the electronic fuse, the customer must check that no hazard is caused by an unexpected restart in circuits without reset button (automatic reset).

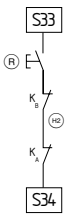

Fig. 8

Fig. 9

8.3 Sensor configuration

Dual-channel control of a safety-related electronic (micro-processor-based) safety guard with p-type transistor outputs e.g. AOPD's to EN IEC 61496 (see Fig. 10)
- Wire breakage and earth leakage in the control circuits are detected.
- The safety-monitoring module therefore is not equipped with a cross-wire short detection here. The safety-monitoring module therefore is not equipped with a cross-wire short detection here.
- Control category: 3 to EN 954-1
- If cross-wire shorts in the control circuits are detected by the safety guard:
  - control category 4 to EN 954-1
  - category 4 – PL e to DIN EN ISO 13849-1 possible.

Single-channel emergency stop circuit with command devices to DIN EN ISO 13850 (EN 418) and EN 60947-5-5 (Fig. 11)
- Wire breakage and earth le akage in the control circuits are detected.
- Control category: 2 to EN 954-1
- Category 2 – PL d to DIN EN 13849-1 possible

Dual-channel emergency stop circuit with command devices to DIN EN ISO 13850 (EN 418) and EN 60947-5-5 (Fig. 12)
- Wire breakage and earth leakage in the control circuits are detected.
- Cross-wire shorts between the control circuits are not detected.
- Control category: 3 to EN 954-1
- Category 4 – PL e to DIN EN ISO 13849-1 possible (with protective wiring)

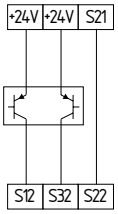

Fig. 10

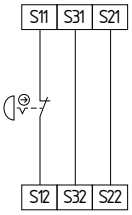

Fig. 11

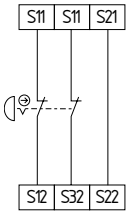

Fig. 12

Dual-channel emergency stop circuit with command devices to DIN EN ISO 13850 (EN 418) and EN 60947-5-5 (Fig. 13)
- Wire breakage and earth leakage in the control circuits are detected.
- Cross-wire shorts between the control circuits are detected.
- Control category: 4 to EN 954-1
- Category 4 – PL e to DIN EN ISO 13849-1 possible.

Single-channel guard door monitoring circuit with interlocking devices to EN 1088 (Fig. 14)
- At least one contact with positive break required.
- Wire breakage and earth le akage in the control circuits are detected.
- Control category: 2 to EN 954-1
- Category 2 – PL d to DIN EN ISO 13849-1 possible.

Dual-channel guard door monitoring circuit with interlocking device to EN 1088 (see Fig. 15)
- With at least one positive-break position switch
- Wire breakage and earth leakage in the control circuits are detected.
- Cross-wire shorts between the control circuits are not detected.
- Control category: 3 to EN 954-1
- Category 4 – PL e to DIN EN ISO 13849-1 possible (with protective wiring)

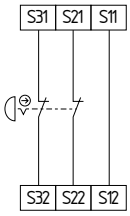

Fig. 13

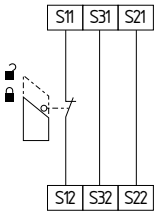

Fig. 14

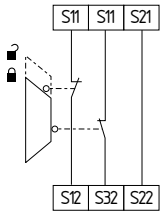

Fig. 15

Dual-channel guard door monitoring circuit with interlocking device to EN 1088 (see Fig. 16)
- With at least one positive-break position switch
- Wire breakage and earth leakage in the control circuits are detected.
- Cross-wire shorts between the control circuits are detected.
- Control category: 4 to EN 954-1
- Category 4 – PL e to DIN EN 13849-1 possible

Monitored dual-channel safety guard: dual-channel safety guard monitoring to EN 1088 with at least one positive-break position switch and automatic start (Fig. 17)
- This control system recognises wire breakage and earth faults in the guard monitoring circuits.
- Cross-wire shorts between the guard monitoring circuits are detected.
- A time of approx. 500 ms is tolerated between the opening of the contacts S13-S14 and the closing of S21-S22 and S31-S32.
- Category 4 – PL e to DIN EN 13849-1 possible

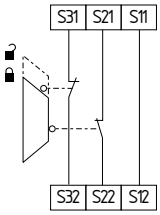

Fig. 16

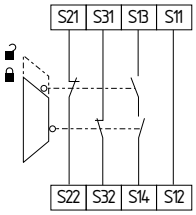

Fig. 17

8.4 Actuator configuration

Single-channel control with feedback circuit (Fig. 18)
- Suitable for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- Ⓗ2 = feedback circuit:
  If the feedback circuit is not required, establish a bridge.

Dual-channel control with feedback circuit (Fig. 19)
- Suitable for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- Ⓗ2 = feedback circuit:
  If the feedback circuit is not required, establish a bridge.

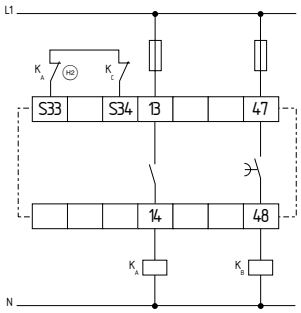

Fig. 18

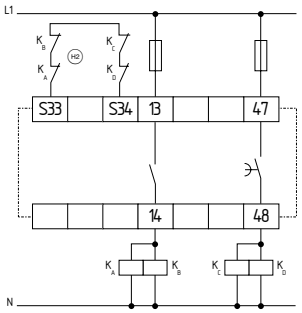

Fig. 19

Differential control with feedback circuit (see Fig. 20)
- Suitable for increase in capacity or number of contacts by means of contactors or relays with positive-guided contacts.
- Ⓗ2 = feedback circuit:
  If the feedback circuit is not required, establish a bridge. If the enabling circuit of the controller must be equipped with its own feedback circuit, this circuit must be integrated as shown in the wiring example "dual-channel control with feedback circuit" (see there).

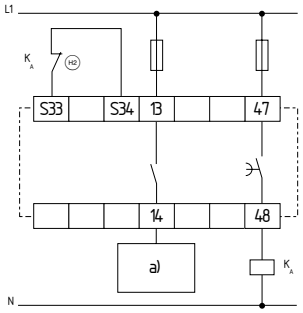

Fig. 20 a) Enabling signal controller
