1. About this document

1.1 Function

This operating instructions manual provides all the information you need for the mounting, set-up and commissioning to ensure the safe operation and disassembly of the safety switchgear. The operating instructions must be available in a legible condition and a complete version in the vicinity of the device.

1.2 Target group: authorised qualified personnel

All operations described in this operating instructions manual must be carried out by trained specialist personnel, authorised by the plant operator only.

Please make sure that you have read and understood these operating instructions and that you know all applicable legislations regarding occupational safety and accident prevention prior to installation and putting the component into operation.

The machine builder must carefully select the harmonised standards to be complied with as well as other technical specifications for the selection, mounting and integration of the components.

1.3 Explanation of the symbols used

Information, hint, note:

This symbol is used for identifying useful additional information.

Caution: Failure to comply with this warning notice could lead to failures or malfunctions.

Warning: Failure to comply with this warning notice could lead to physical injury and/or damage to the machine.

1.4 Appropriate use

The products described in these operating instructions are developed to execute safety-related functions as part of an entire plant or machine. It is the responsibility of the manufacturer of a machine or plant to ensure the correct functionality of the entire machine or plant.

The safety switchgear must be exclusively used in accordance with the versions listed below or for the applications authorised by the manufacturer. Detailed information regarding the range of applications can be found in the chapter "Product description".

1.5 General safety instructions

The user must observe the safety instructions in this operating instructions manual, the country-specific installation standards as well as all prevailing safety regulations and accident prevention rules.

Further technical information can be found in the Schmersal catalogues or in the online catalogue on the Internet: www.schmersal.net.

The information contained in this operating instructions manual is provided without liability and is subject to technical modifications.

There are no residual risks, provided that the safety instructions as well as the instructions regarding mounting, commissioning, operation and maintenance are observed.

1.6 Warning about misuse

In case of improper use or manipulation of the safety switchgear, personal hazards or damages to machinery or plant components cannot be excluded when safety switchgear is used. The relevant requirements of the standard ISO 14119 must be observed.

1.7 Exclusion of liability

We shall accept no liability for damages and malfunctions resulting from defective mounting or failure to comply with this operating instructions manual. The manufacturer shall accept no liability for damages resulting from the use of unauthorised spare parts or accessories.

For safety reasons, invasive work on the device as well as arbitrary repairs, conversions and modifications to the device are strictly forbidden; the manufacturer shall accept no liability for damages resulting from such invasive work, arbitrary repairs, conversions and/or modifications to the device.

2. Product description

2.1 Ordering code

This operating instructions manual applies to the following types:

AZM 415-22ZPK^① M20 24 VAC/DC

No.	Option	Description
①	A	Power to unlock Power to lock

AZM 415-33ZPK^{①②③④⑤}

No.	Option	Description
①	A	Power to unlock Power to lock
②	ST STL	M23 connector at the right-hand side M23 connector at the left-hand side
③	E	Manual release using triangular key (only for power to unlock principle)
④	1637	Gold-plated contacts
⑤	24 VAC / DC 110 VAC 230 VAC	U _s 24 VAC U _s 110 VAC U _s 230 VAC

Only if the information described in this operating instructions manual are realised correctly, the safety function and therefore the compliance with the Machinery Directive is maintained.

2.2 Special versions

For special versions, which are not listed in the order code below 2.1, these specifications apply accordingly, provided that they correspond to the standard version.

2.3 Destination and use

The AZM 415 solenoid interlock has been designed to prevent movable safety guards, e.g. fences, covers or doors, in conjunction with the control part of a machine, e.g. fail-safe delay timers or fail-safe standstill monitors, from being opened before hazardous conditions (e.g. run-on movements) have been eliminated. The AZM 415-33 includes three switch inserts and is designed for monitoring double safety guards.

Interlocks with the power to lock principle may only be used in special cases after a thorough evaluation of the accident risk, since the guarding device can immediately be opened on failure of the electrical power supply or when the main switch is opened.

Solenoid interlock with manual release AZM 415-33PDKE

The manual release is only used with components that operate on the power to unlock principle. It is used as a mounting tool and also as a tool to open a closed and locked safety guard in case of a power failure. The point of access to the manual release or the manual release itself must be protected in accordance with the provisions of the professional association, e.g. by sealing during mounting.

Unlocking: using triangular key (available as accessory)

Reset: by turning the triangular key back

The safety switchgears are classified according to ISO 14119 as type 2 interlocking devices.

The user must evaluate and design the safety chain in accordance with the relevant standards and the required safety level.

The entire concept of the control system, in which the safety component is integrated, must be validated to the relevant standards.

2.4 Technical data

Standards:	IEC 60947-5-1, ISO 14119, BG-GS-ET-19
Enclosure:	light-alloy die-cast, enamel finish
Actuator and locking bolt:	zinc-plated metal / aluminium
Locking force F:	
- AZM 415-22:	3500 N
- AZM 415-33:	2500 N (each safety guard)
Latching force:	150 ... 400 N (adjustable)
Coding level according to ISO 14119:	low
Protection class:	IP67
Degree of pollution:	3
Contact material:	Silver
Contact types:	Change-over contact with double break, type Zb or 2 NC contacts, with galvanically separated contact bridges
Switching system:	⊖ IEC 60947-5-1; slow action, NC contact with positive break
Connection:	screw terminals
Cable type:	rigid / flexible
Cable section:	min. 0.75 mm ² - max. 2.5 mm ² (including conductor ferrules)
Cable entry:	2 x M20 x 1.5
Rated impulse withstand voltage U _{imp} :	4 kV
Rated insulation voltage U _i :	250 V
Thermal test current I _{th} :	6 A
Utilisation category:	AC-15
Rated operating current/voltage I _g /U _g :	4 A / 230 VAC
Max. fuse rating:	6 A gG D-fuse
Required rated short-circuit current:	1000 A
Positive break travel (unlocked):	AZM 415-22: 5 mm AZM 415-33: 4,5 mm
Positive break force (unlocked):	min. 15 N (depending on the setting of the ball latch)
Magnet:	100% ED
Rated control voltage U _g :	24 VAC / DC, 110 VAC, 50 / 60 Hz, 230 VAC, 50 / 60 Hz,
Power consumption:	max. 10 W
Actuating speed:	max. 0.2 ms
Max. actuating frequency:	2000 s/h
Ambient temperature:	-25 °C ... + 50 °C
Mechanical life:	1 million operations

2.5 Safety classification

Standards:	ISO 13849-1
Envisaged structure:	
- Basically:	applicable up to Cat. 1 / PL c
- With 2-channel usage and fault exclusion mechanism*:	applicable up to Cat. 3 / PL d with suitable logic unit
B _{10d} NC contact:	2,000,000
B _{10d} NO contact at 10% ohmic contact load:	1,000,000
Service life:	20 years

* If a fault exclusion to the 1-channel mechanics is authorised.

$$MTTF_d = \frac{B_{10d}}{0,1 \times n_{op}} \quad n_{op} = \frac{d_{op} \times h_{op} \times 3600 \text{ s/h}}{t_{cycle}}$$

(Determined values can vary depending on the application-specific parameters h_{op} , d_{op} and t_{cycle} as well as the load.)

If multiple safety components are wired in series, the Performance Level to ISO 13849-1 will be reduced due to the restricted error detection under certain circumstances.

3. Mounting

3.1 General mounting instructions

Four mounting holes are provided for fitting the solenoid interlock. The solenoid interlock must not be used as an end stop. Any mounting position. The mounting position however must be chosen so that the ingress of dirt and soiling in the used opening is avoided. A smooth insertion of the actuator in the enclosure must be ensured.

Mounting of the actuator

See actuator mounting instructions.

Please observe the remarks of the standards ISO 12100, EN 953 and ISO 14119.

The safety component and the actuator must be permanently fitted to the safety guards and protected against displacement by suitable measures (tamperproof screws, gluing, drilling, pinning).

3.2 Dimensions

All measurements in mm.

AZM 415-22

AZM 415-33

Key

- A setting screw: ball latch 150 ... 400 N
- E Manual release

3.3 Adjustment

In the unlocked condition, the safety guard is kept in a closed condition by the adjustable ball latch. By rotating a hexagonal key wrench clockwise, the desired holding force can be increased; if the hexagonal key wrench is rotated counterclockwise, the holding force is decreased. The holding force must always be set as low as possible.

4. Electrical connection

4.1 General information for electrical connection

The electrical connection may only be carried out by authorised personnel in a de-energised condition. At least one magnetic contact ⊖ with positive break contacts must be integrated in the safety circuit.

If the risk analysis indicates the use of a monitored interlock they are to be connected in the safety circuit with the contacts indicated with the symbol .

4.2 Connection and sealing

For the cable entry, suitable cable glands with an appropriate degree of protection must be used. Non-used openings must be sealed by means of threaded plugs. The switching compartment must be cleaned (removal of cable excess etc.); put back the cover after wiring and uniformly tighten the cover screws.

Tightening torque for the fixing screws:

- Cover: 0,6 ... 0,7 Nm (AZM 415-33: 1,2 ... 1,4 Nm)
- Bottom cover: 0,7 ... 0,8 Nm

4.3 Contact variants

Contacts shown in a de-energised condition and with the actuator inserted.

Power to unlock

AZM 415-22ZPK

AZM 415-33ZPDK

Power to lock

AZM 415-22ZPKA

AZM 415-33ZPKA

Key

- ⊖ positive break NC contact
- ⊕ Monitoring the interlock according to ISO 14119
- ⬆ Actuated
- ⬆ Not actuated

5. Set-up and maintenance

5.1 Functional testing

The safety function of the safety components must be tested. The following conditions must be previously checked and met:

1. Fitting of the solenoid interlock and the actuator
2. Check the integrity of the cable entry and connections
3. Check the switch enclosure for damage

5.2 Maintenance

A regular visual inspection and functional test, including the following steps, is recommended:

1. Check for tight installation of the actuator and the switch
2. Remove particles of dust and soiling
3. Check cable entry and connections

Adequate measures must be taken to ensure protection against tampering either to prevent tampering of the safety guard, for instance by means of replacement actuators.

Damaged or defective components must be replaced.

6. Disassembly and disposal

6.1 Disassembly

The safety switchgear must be disassembled in a de-energised condition only.

6.2 Disposal

The safety switchgear must be disposed of in an appropriate manner in accordance with the national prescriptions and legislations.

7. EU Declaration of conformity

EU Declaration of conformity

Original
K.A. Schmersal GmbH & Co. KG
Möddinghofe 30
42279 Wuppertal
Germany
Internet: www.schmersal.com

We hereby certify that the hereafter described components both in their basic design and construction conform to the applicable European Directives.

Name of the component: AZM 415

Type: See ordering code

Description of the component: Interlocking device with electromagnetic interlock for safety functions

Relevant Directives: Machinery Directive 2006/42/EC
RoHS-Directive 2011/65/EU

Applied standards: DIN EN 60947-5-1:2010
DIN EN ISO 14119:2014

Person authorized for the compilation of the technical documentation: Oliver Wacker
Möddinghofe 30
