

Absolute encoders AFS/AFM60 SSI

AFS60B-BHAL008192

Model Name > [AFS60B-BHAL008192](#)
Part No. > [1054333](#)

At a glance

- High-resolution absolute encoders with up to 30 bits (AFM60) or up to 18 bits (AFS60)
- Face mount flange, servo flange, blind or through hollow shaft
- SSI, SSI + Incremental or SSI + Sin/Cos interface
- Programmable resolution and offset (dependent on type)
- Connection system: M12, M23 connector or cable outlet
- Enclosure rating: IP 67 (housing), IP 65 (shaft)
- Operating temperature: -30 °C to +100 °C (depends on type)

Your benefits

- Programmability of the encoders means less storage, greater machine availability and easy installation
- Precise positioning due to high resolutions
- Large selection of mechanical interfaces and electrical contacting possibilities: Suitable for all applications
- Suitable for applications with limited space requirements (extremely short installation depth of 30 mm)
- Very good rotation accuracy due to increased bearing distance
- One programming tool and software with automatic encoder detection for AFS60/AFM60/DFS60

Performance

Max. number of steps per revolution:	8,192
Max. number of revolutions:	1
Resolution power:	8,192 x 1
Error limits:	± 0.05 °
Repeatability (Ta not constant):	0.002 °
Measuring step deviation:	± 0.01 °
Measuring step:	0.01 °
Initialization time:	50 ms ¹⁾

¹⁾ Valid positional data can be read once this time has elapsed

Mechanical data

Mechanical interface:	Blind hollow shaft
Shaft diameter:	15 mm
Start up torque:	0.8 Ncm (20 °C)

Operating torque:	0.6 Ncm (20 °C)
Maximum operating speed:	6,000 /min ¹⁾
Moment of inertia of the rotor:	40 gcm ²
Bearing lifetime:	3.0 x 10 ⁹ revolutions
Max. angular acceleration:	500,000 rad/s ²
Permissible movement axial static/dynamic:	± 0.5 mm, ± 0.2 mm
Permissible movement radial static/dynamic:	± 0.3 mm, ± 0.1 mm
Type of mounting shaft:	Blind hollow shaft

¹⁾ Self warming of 3.3 K per 1000 revolutions/min when applying note working temperature range

Electrical data

Power consumption:	0.5 W (without load)
Operating voltage range:	4.5 V DC ... 32 V DC
MTTFd: mean time to dangerous failure:	250 a (EN ISO 13849-1) ¹⁾
Connection type:	Cable, 8-wire, universal, 3 m ²⁾
Code type:	Gray
Code sequence:	CW/CCW, parameter adjustable
Reverse polarity protection:	1

¹⁾ This product is a standard product and does not constitute a safety component as defined in the Machinery Directive.

Calculation based on nominal load of components, average ambient temperature 40°C, frequency of use 8760 h/a. All

electronic failures are considered hazardous. For more information, see document no. 8015532. ²⁾ The universal cable outlet is positioned in such a way, that it is possible to lay the cable in a radial or axial direction without kinking it

Interfaces

Electrical interface:	SSI/Gray
Interface signals:	Clock +, Clock -, Data +, Data- ¹⁾
Clock frequency:	2 MHz
SET (electronic adjustment):	H-active (L ≡ 0 - 1,5 V, H ≡ 2,0 - Us V)
CW/CCW (counting sequence when turning):	L-active (L ≡ 0 - 1,5 V, H ≡ 2,0 - Us V)

¹⁾

Ambient data

EMC:	(according to EN 61000-6-2 and EN 61000-6-3) ¹⁾
Enclosure rating:	IP 65 (according to IEC 60529), shaft side, IP 67 (according to IEC 60529), housing side
Permissible relative humidity:	90 % (condensation of the optical scanning not permitted)
Working temperature range:	-30 °C ... 100 °C
Storage temperature range:	-40 °C ... 100 °C, without package
Resistance to shocks:	70 g, 6 ms (according to EN 60068-2-27)
Resistance to vibration:	30 g, 10 Hz ... 2,000 Hz (according to EN 60068-2-6)

¹⁾

|1| Cable diameter = 5,6 mm
+/- 2 mm Bending radius = 30 mm

Signalausgänge

SSi data format singleturn

Bit 1-18: Position Bits

- LSB: Least significant Bit
- MSB: Most significant Bit

Bit 19-21: Error Bits

- **ERRDIS:** Failure message about speed. If this failure occurs during the position building procedure it will be indicated by the ERRDIS-BIT.
- **ERRSL:** Light source monitoring failure.
- **ERRSYN:** Contamination of the disc or scanning-slit. During the determination of the position, an error has occurred since the last SSI transmission. The error bit will be deleted during the next data transmission.

The evaluation of the error bits has to be realized in the PLC.

The provided error bits don't have to be used by the PLC compulsorily.

Example

If the resolution of the absolute encoder is set on 13 bits, 16 bits are provided by the encoder: 13 data bits and 3 error bits. If the PLC is not able to evaluate the error bits, the PLC has to be set on a resolution of 13 bits. Then the error bits have to be masked out by the PLC.

SSI data format multiturn

30 Bits

Bit 1-12: Position Bits multitem
Bit 13-30: Position Bits singleturn
Bit 31-33: Error Bits

27 Bits

Bit 1-12: Position Bits multiturm
Bit 13-27: Position Bits singleturm
Bit 28-30: Error Bits

Error Bits

- **ERRDIG:** Failure message about speed. If this failure occurs during the position building procedure it will be indicated by the ERRDIG-Bit.
- **ERRSL:** Light source monitoring failure.
- **ERRSYNC:** Contamination of the disc or scanning system. During the determination of the position, an error has occurred since the last SSI transmission. The error bit will be deleted during the next data transmission.

The evaluation of the error bits has to be realized in the PLC.

The provided error bits don't have to be used by the PLC compulsorily. The multiturn resolution is fixed on 12 bits.

Example

If the resolution of the absolute encoder is set on 27 bits, 30 bits are provided by the encoder: 27 data bits and 3 error bits. If the PLC is not able to evaluate the error bits, the PLC has to be set on a resolution of 27 bits. Then the error bits have to be masked out by the PLC.

The graph shows the relationship between speed and steps per revolution. The y-axis, labeled 'Steps per revolution', ranges from 16384 to 262144. The x-axis, labeled 'Speed N [min⁻¹]', ranges from 0 to 12000. A blue curve starts at a high value for low speed and decreases as speed increases, approaching a horizontal asymptote.

Interfaces

SSI data format singlets

The diagram shows a sequence of 16 bits. The first 15 bits are labeled 'Position' and the 16th bit is labeled 'Error'. The error bit is highlighted in red.

Bit 15 - Position Bits

- USB Linear encoder bit
- MOSI Master output bit

Bit 16 - Error Bits

- Error bit

The error bit is set to 1 when the data occurs during the position holding movement it will be indicated by the ERROR flag.

• ERROR: Light source monitoring fault.

• ENDPOINT: Contamination of the disc or missing encoder. During the intermission of the position, an error has occurred since the SSI transmission. The error bit will be detected during the next data transmission.

The evaluation of the error bits has to be realized in the PLC.

The provided error data have to be used by the PLC completely.

Example

If the measurement of the absolute encoder at set 33.36, 16 bits are provided by the encoder: 15 data bits and 1 error bit. The error bit is set to 1 when the error occurs. The error bit has to be set as a measurement of 13 bits. The error bits have to be read by the PLC.

SSI data format multibit

The diagram shows a sequence of 27 bits. The first 26 bits are labeled 'Position' and the 27th bit is labeled 'Error'. The error bit is highlighted in red.

Bit 26 - Position Bits

- USB Linear encoder bit
- MOSI Master output bit

Bit 27 - Error Bits

- Error bit

The error bit is set to 1 when the data occurs during the position holding movement it will be indicated by the ERROR flag.

• ERROR: Light source monitoring fault.

• ENDPOINT: Contamination of the disc or missing encoder. During the intermission of the position, an error has occurred since the SSI transmission. The error bit will be detected during the next data transmission.

The evaluation of the error bits has to be realized in the PLC.

The provided error data have to be used by the PLC completely. The multibit resolution is set in 22 bits.

Example

If the measurement of the absolute encoder at set 27.36, 26 bits are provided by the encoder: 27 data bits and 2 error bits. The error bit is set to 1 when the error occurs. The error bit has to be set as a measurement of 27 bits. The error error bits have to be read by the PLC.
